REPORT NO. 225

WATER DISCRIMINATING ELECTRIC BOMB FUZE, XB-31A, DEVELOPMENT OF JETTISON TEST OF THE WATER DISCRIMINATING BOMB NOSE FUZE XB-31A ON WATER TARGET

Task Assignment NPG-25-RA2b-227-1
Copy No. 19 Classification CONFIDENTIAL
Jettison Test of Water Discriminating Bomb Nose Fuze XB-31A on Water Target

PART A

SYNOPSIS

1. Six Bomb Nose Fuzes, XB-31A, assembled in TNT loaded AN-M64, 500 lb. bombs, were dropped on a water target from an aircraft flying at 15,000 feet to determine the safety of the nose fuze when dropped in an unarmed condition.

2. It is concluded that the six fuzes tested, successfully withstood the jettison test.

PART B

INTRODUCTION

1. AUTHORITY:

This test was directed by reference (a) under Task Assignment No. NPG-25-Ref2b-227, authorized by reference (b).

2. REFERENCES:

   a. NOL Conf. ltr. NP/51/F41-6(40-63) dated 3 Dec. 1948.
   e. NPG restr. ltr. F41-6(11)/L5-2(R 70701) dated 29 April 1947.
   g. NPG Report No. 8 dated 12 April 1948.
   h. NPG Report No. 185 dated 11 January 1949.

3. BACKGROUND:

   References (d) through (h) report previous drop tests on water of the subject fuze, assembled in the General Purpose Bomb, AN-M64. References (i), (j), and (k) are reports submitted on gun firing tests of this fuze. Reference (c) reported that one Bomb Nose Fuze, XB-31A, assembled in a TNT loaded AN-M64, 500 lb. bomb dropped in an unarmored condition on water from 15,000 feet functioned 20 seconds after impact.

4. OBJECT OF TEST:

   This test was conducted to determine whether the Bomb Nose Fuze, XB-31A, with a minor structural modification, is safe in the unarmed position when dropped on water from an altitude of 15,000 feet.

Jettison Test of Water Discriminating Bomb Nose Fuze XB-31A on Water Target

5. PERIOD OF TEST:
   a. Date of Project Letter 3 December 1948
   b. Date Necessary Material Received 5 January 1949
   c. Date Commenced Test 7 January 1949
   d. Test Completed 7 January 1949
   e. Partial Reports Submitted See references (c) through (k).

6. REPRESENTATIVE PRESENT:
   Mr. W. N. Hurley Naval Ordnance Laboratory

PART C

DETAILS OF TEST

7. DESCRIPTION OF ITEM UNDER TEST:
   a. The XB-31A Water Discriminating Bomb Nose Fuze Fuzes tested and reported herein were constructed on the same principles as the fuze used in the jettison test reported in reference (c) with the following change in the pole piece and magnet shaft assembly:

      (1) The silver soldered joint which secured the magnet shaft to the pole piece was modified by replacing the silver soldered joint with a tapered bushing.

   b. The nose fuzes were assembled in TNT loaded AN-M64, 500 lb. bombs. Each fuze was locked in the unarmed position.

   c. Tail fuzes, M16, with 8-15 second delay detonators were installed in the bombs to insure detonation.

8. DESCRIPTION OF TEST EQUIPMENT:
   a. All drops were made from a TBM-3E type aircraft.
   b. Two High Speed Mitchell cameras with 4" lenses were used to photograph all drops.
   c. A pontoon target was located in the channel of the Potomac River in approximately 100' of water.
9. PROCEDURE:
   a. Six bombs with nose and tail fuzes installed were dropped into water from a true altitude of 15,000 feet and at airspeeds of 120 knots indicated.
   b. Fuze delays were determined from the camera film, and by stop watches.

10. RESULTS AND DISCUSSION:
   a. The six nose fuzes, XB-31A, successfully withstood the impacts without detonating. All bombs were detonated by the M116 tail fuzes.
   b. Appendix (A) contains detailed data on all drops.

PART D

CONCLUSIONS

11. The six Water Discriminating Bomb Nose Fuzes, XB-31A, successfully withstood the jettison test.
