HEADQUARTERS QUARTERMASTER RESEARCH & DEVELOPMENT COMMAND
OFFICE OF THE COMMANDING GENERAL
NATICK, MASSACHUSETTS

11 January 1957

Major General Kester L. Hastings
The Quartermaster General
Washington 25, D. C.

Dear General Hastings:

The growing importance of northern latitudes in military planning has produced increased demands for climatological and meteorological information for this region. Quartermaster Corps in particular requires such information as a basis for designing and planning issue of items of equipment that will function in high latitudes and will adequately protect troops who must operate there.

Our scientists are currently planning climatic research studies in Greenland, to be conducted jointly with research personnel of Signal Corps and Corps of Engineers. As the existing sources of climatological information for Greenland have not heretofore been published on a regional basis, a need exists for a ready guide to this literature that can be used by Quartermaster Corps and other scientists engaged in environmental studies of Greenland. The enclosed report has been prepared to fill this need. It consists of 275 selected references, indexed in a manner that will permit researchers to find applicable sources without time-consuming searches through existing catalogs of publication titles.

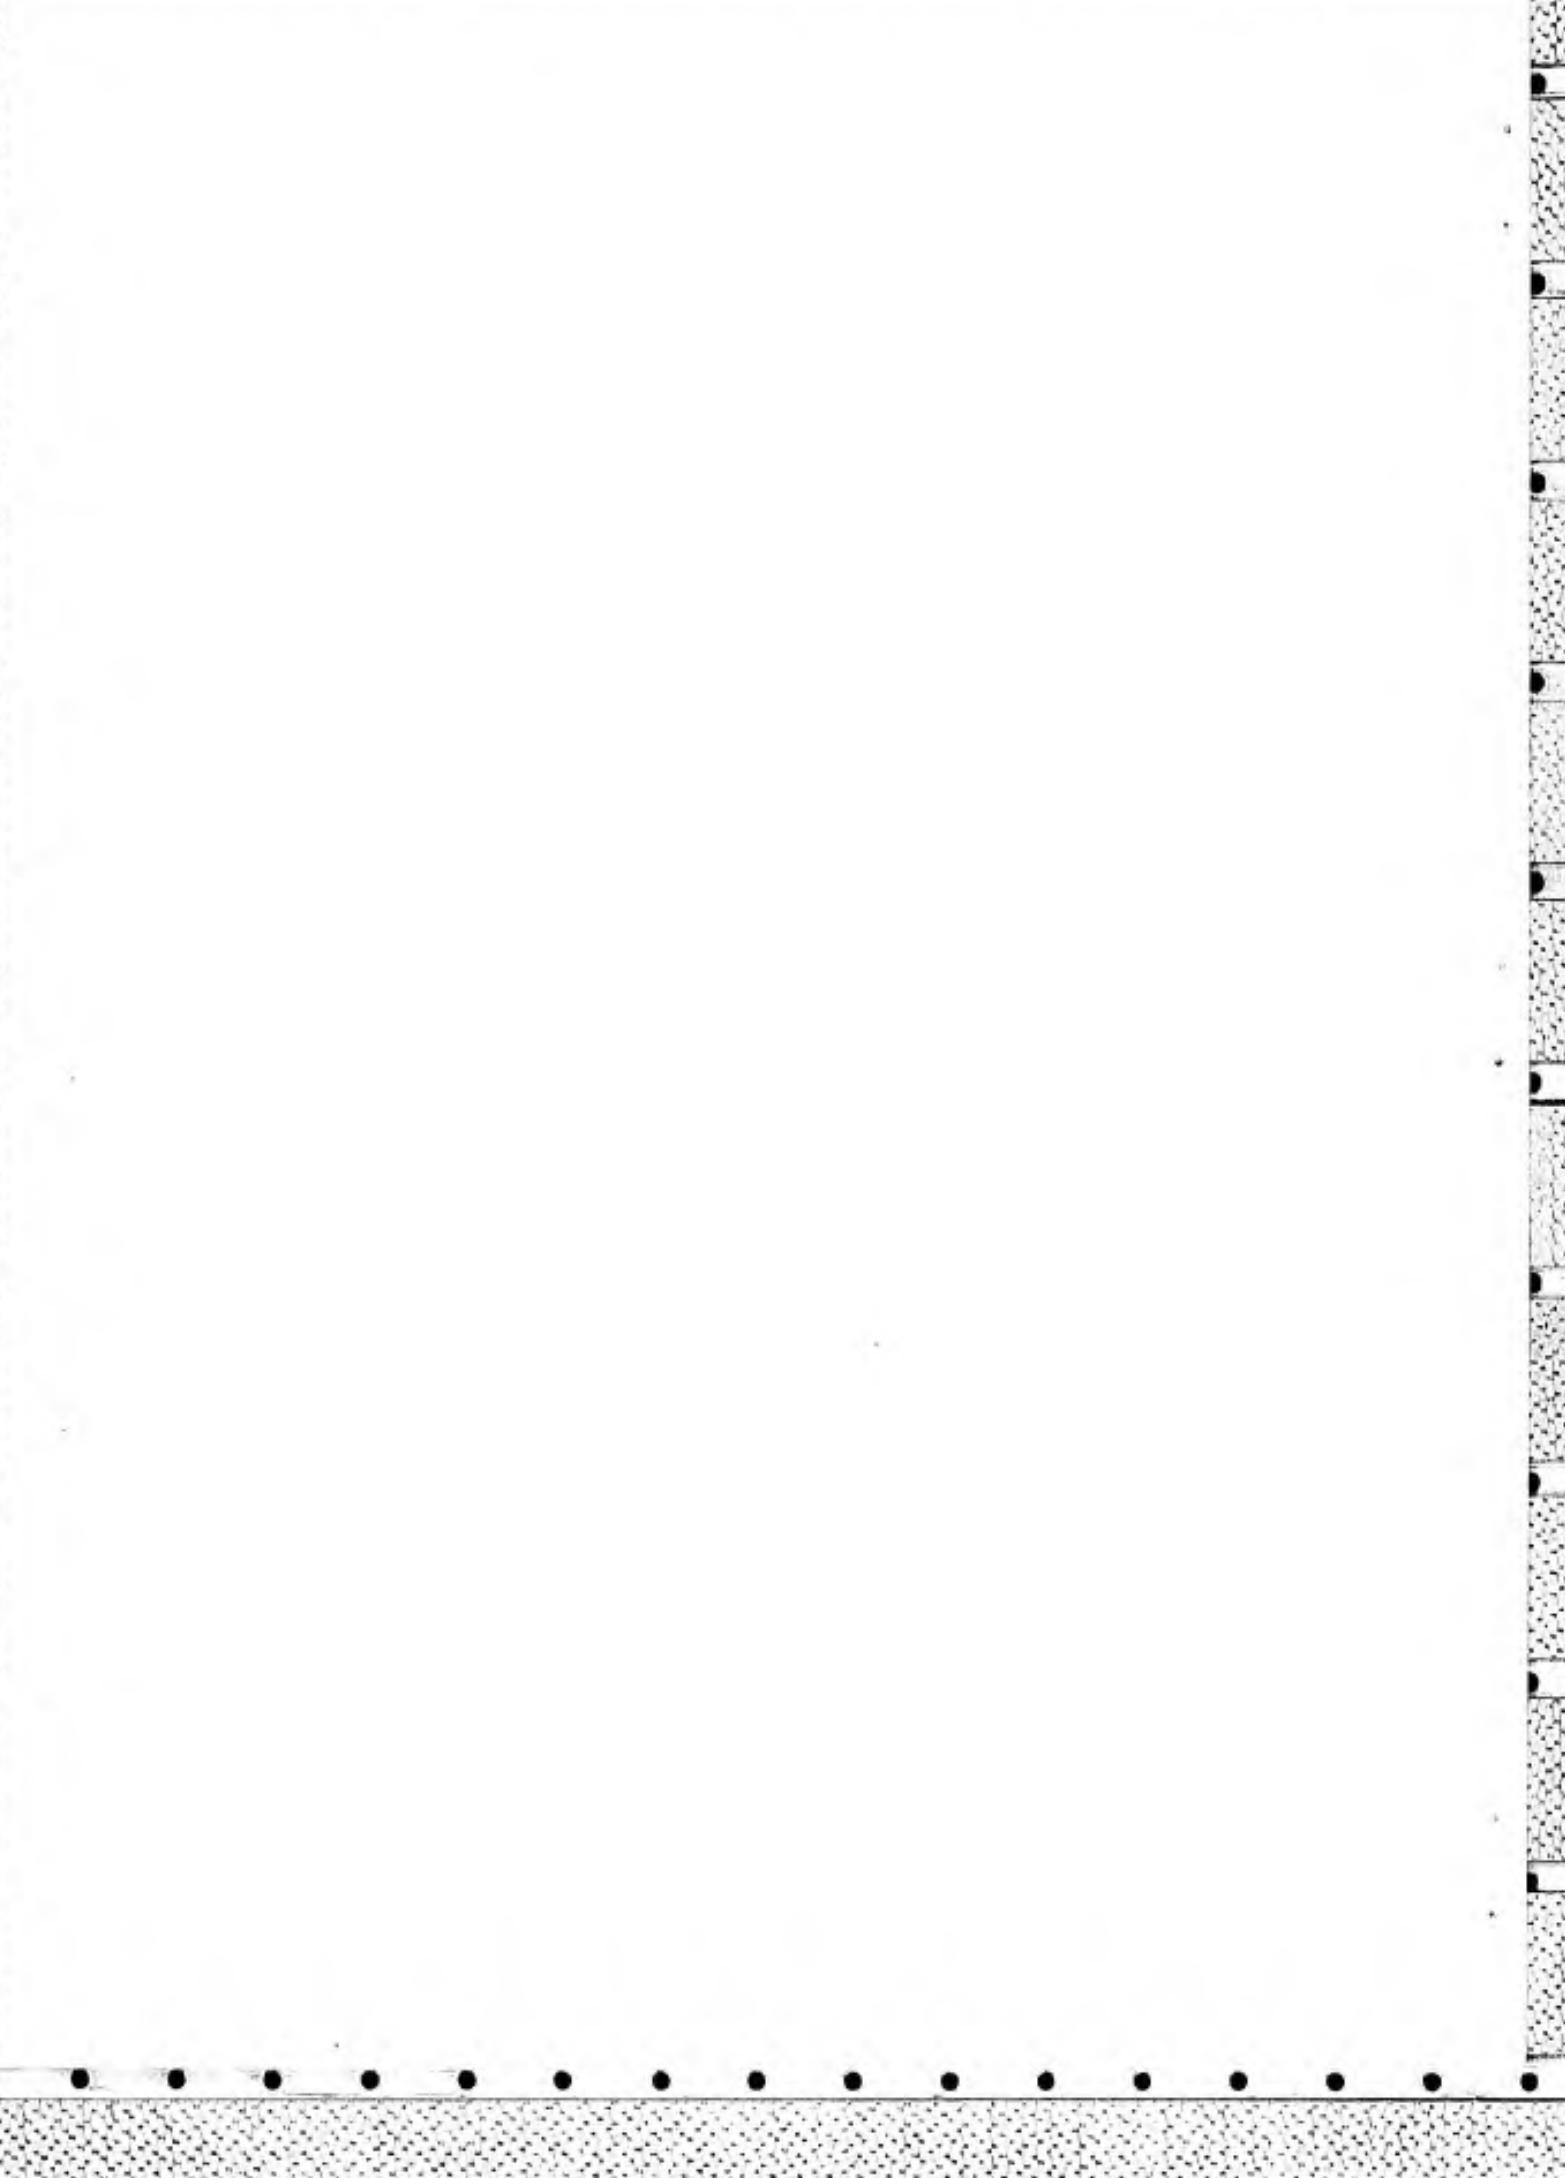

Sincerely yours,

G. Galloway
S. G. GALLOWAY

CLIMATIC INFORMATION SOURCES FOR GREENLAND

1. Purpose and Organization

→ This report was prepared in response to a continuing demand for reference material on the climate of Greenland. The information contained herein is intended to provide a basic interim survey, primarily for use by Quartermaster Corps scientists requiring climatological and meteorological information for Greenland. A more detailed survey of meteorological data is in preparation elsewhere as a joint project of the U. S. Air Force and the U. S. Weather Bureau.

→ A station and route map accompanied by a station record table is provided for location purposes. This section, together with the reference key at the close of the report, can be used to localize most of the entries in the bibliography. Only unclassified sources appear in the bibliography. Owing to the interim nature of this bibliography, it is limited to publications that treat the commonly observed climatic elements, and more specialized subjects such as cosmic radiation, electrical or optical phenomena, radiosonde observations, and soil and water temperatures are largely excluded.

2. Map and Station Records

The map (Fig. 1) shows the location of Greenland stations for which meteorological data are available, and routes of major icecap expeditions of the past 70 years. Boundaries of the five arbitrary indexing areas, referred to in the station record table and the key to the bibliography, are also indicated.

In many instances there is disagreement as to grid coordinates among various sources of information. Also, inasmuch as certain original references were unavailable at the time of compilation, the location of stations with short records should be considered approximate rather than precise. These latter stations, located largely on the icecap and along the north and northeast coasts, recorded data only during the brief occupancy by scientific expeditions.

The table of station information (Table I) is intended to complement the map. Stations are alphabetically arranged under sub-headings indicating the map area in which they can be located. Length and dates of records, elevations, and grid coordinates are shown where available.

For most stations records of mean daily temperature, mean daily maximum and minimum temperatures, extreme temperatures, mean monthly precipitation, mean monthly wind speeds, and mean monthly cloudiness are generally available. Snowfall, snow depth, and humidity data are largely fragmentary or unavailable. Expeditions responsible for the existence of many stations represented many sponsoring nations and a diversity of scientific interests; consequently the summarized data lack uniformity of content and presentation. Exceptions to this pattern are about fifteen Danish and four U. S. Air Force coastal

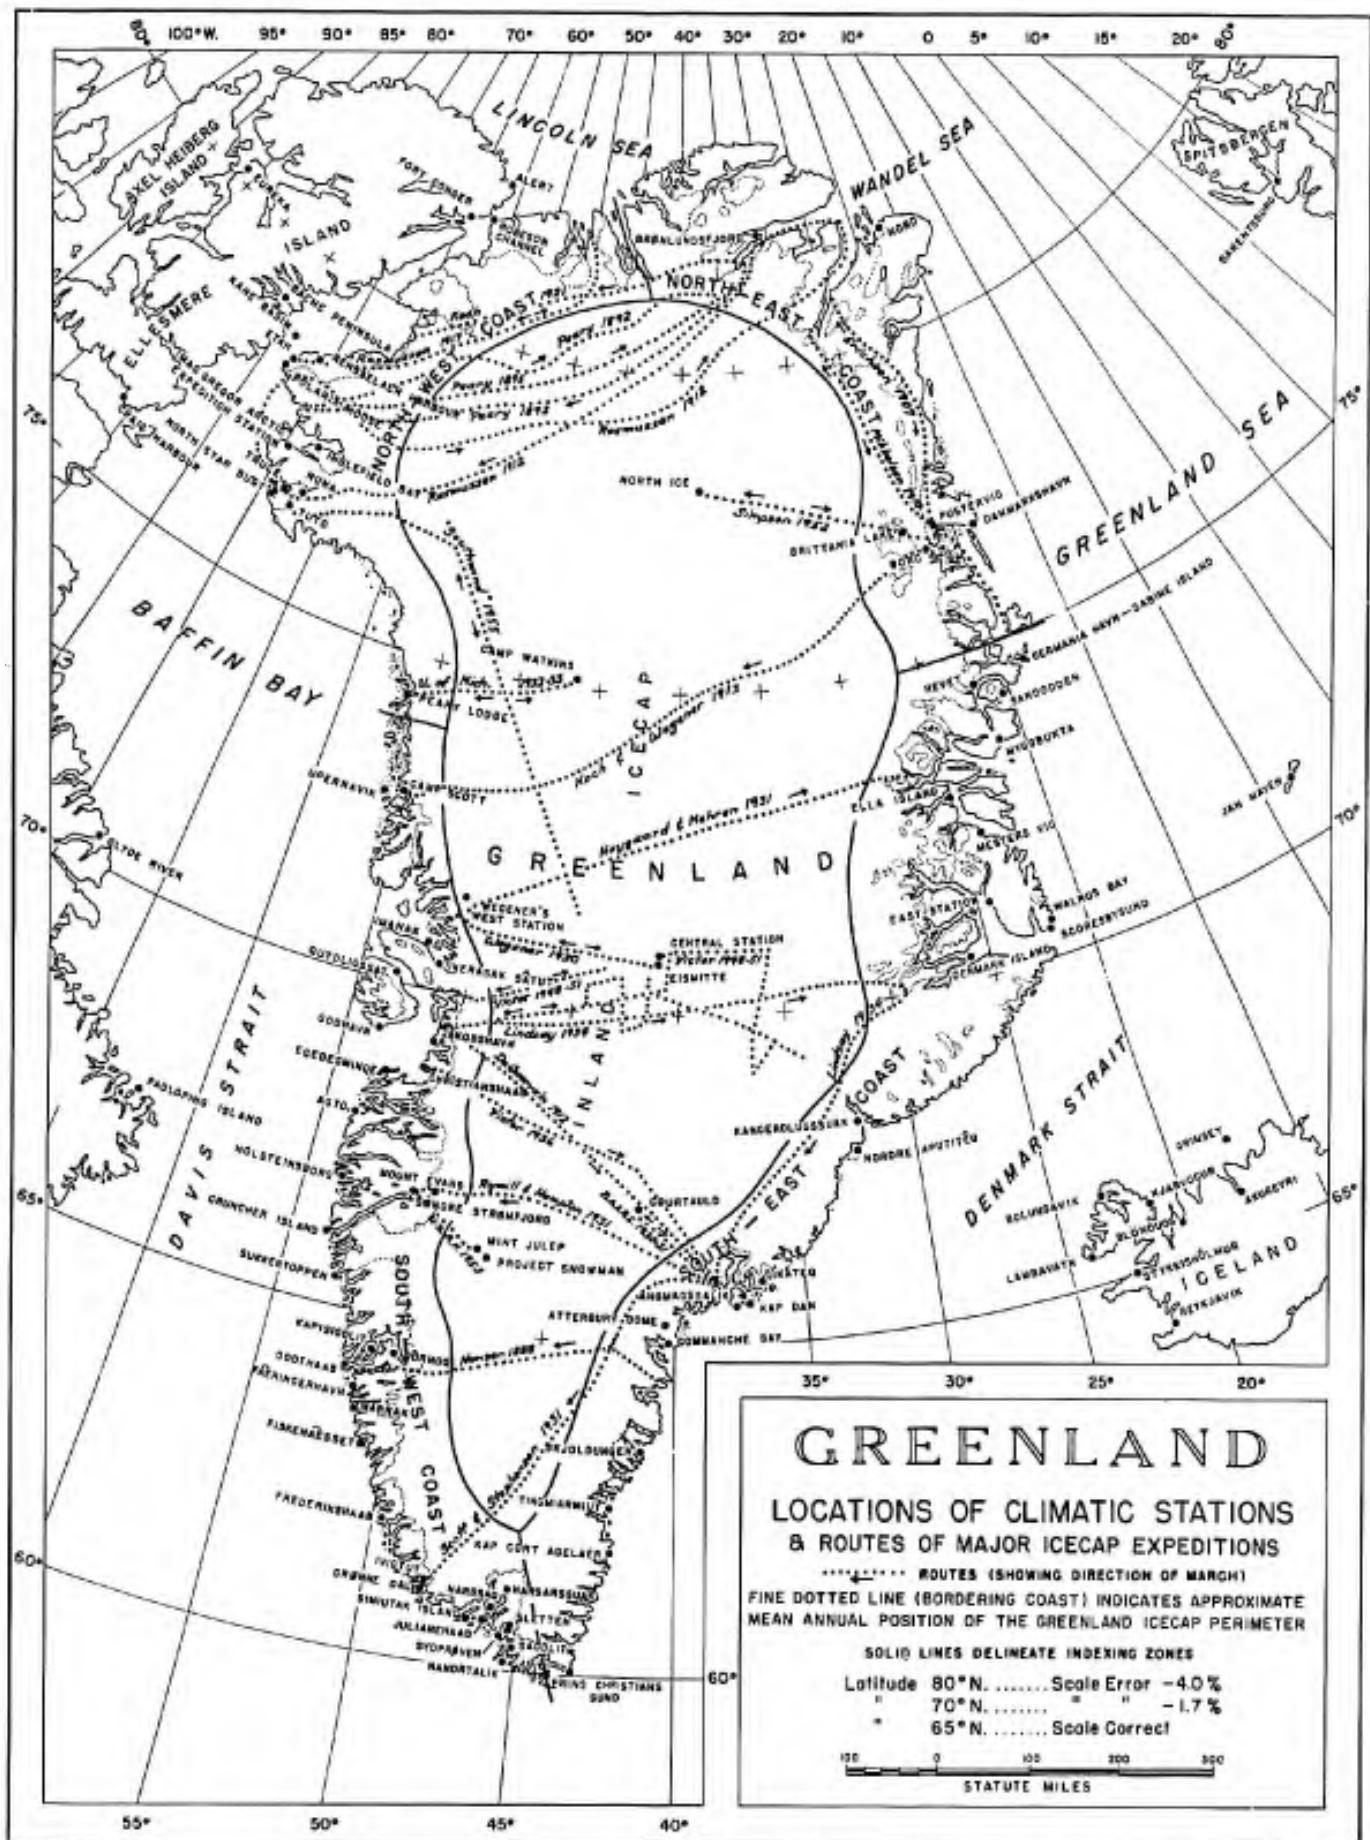

Figure 1

stations. These are permanent installations which currently make most of the standard observations on a continuous basis. Information shown in the table was compiled from sources listed in the accompanying bibliography.

3. Bibliography

The bibliography is composed of 275 selected entries, each containing meteorological data and/or a discussion of some phase of the climatology of Greenland. These sources were derived principally from Meteorological Abstracts and Bibliography (Entry No.3), the Arctic Bibliography (Entry No. 5), and the Bibliography on Snow, Ice and Permafrost (Entry No. 243). It is suggested that users consult these listings for abstracted information.

For publications not readily available, the abstracts in the foregoing bibliographies provided the basis for selection. Where several accounts of the same expedition phase were available, the one which promised to be the most comprehensive was selected, regardless of language.

4. Simplified Key to Bibliography

Greenland as a whole

45, 46, 50, 52, 54, 55, 58, 59, 64, 68, 89, 93, 96, 98, 102, 113, 114, 115, 119, 126, 133, 137, 153, 154, 158, 161, 176, 181, 188, 193, 195, 197, 199, 200, 201, 240, 244, 247, 248, 250, 259, 263, 270

Expeditions*

Inland Icecap: 7, 12, 13, 21, 29, 30, 34, 35, 38, 66, 71, 74, 87, 88, 90, 92, 147, 159, 160, 175, 177, 178, 179, 182, 196, 206, 209, 210, 212, 214, 233, 255, 260, 265

Northeast Coast: 1, 23, 25, 26, 72, 76, 77, 79, 80, 110, 130, 146, 147, 148, 151, 152, 186, 189, 196, 206, 262, 266, 269

Northwest Coast: 10, 38, 62, 75, 84, 108, 140, 141, 169, 170, 179, 196, 225, 232, 251

Southeast Coast: 2, 56, 67, 136, 159, 160, 171, 172, 178, 183, 191, 212, 213, 224

Southwest Coast: 14, 28, 43, 53, 70, 83, 91, 104, 191, 208, 214, 218, 227, 231, 232, 255, 260

Other references*

Inland Icecap: 6, 33, 37, 49, 61, 86, 117, 118, 121, 122, 123, 125, 128, 142, 164, 165, 166, 167, 173, 174, 236, 257

Northeast Coast: 18, 22, 24, 36, 48, 81, 131, 134, 205, 235, 254, 267

Northwest Coast: 4, 9, 39, 95, 234, 237, 245

Southeast Coast: 15, 16, 17, 51, 65, 82, 85, 94, 107, 205, 220, 221, 222, 226, 241, 272

Southwest Coast: 8, 11, 19, 42, 51, 65, 82, 95, 103, 105, 106, 109, 129, 132, 162, 163, 194, 219, 223, 228, 238

Surrounding seas

57, 58, 73, 97, 99, 100, 112, 124, 187, 192

Bibliographies
