PERFORMANCE TEST REPORT
FOR THE
AN/TRN-41 TACAN NAVIGATIONAL SET

This report describes the complete performance test as defined in the Equipment Test Plan for Navigational Set, TACAN, AN/TRN-41, 131500-415.

1. Test Identification. The performance tests are those tests on all performance requirements of Specification No. 404L-701-5017A, Part I of two parts, Prime Item Development Specification for Navigational Set, TACAN, AN/TRN-41, that will not be tested as part of other qualification tests. These tests have been performed on one preproduction system and will not be repeated during acceptance, environmental or flight tests.

2. Functional Purpose. These tests form a part of the AN/TRN-41 qualification tests.

3. Test Objectives. To demonstrate that the AN/TRN-41 will meet the requirements of Specification No. 404L-701-5017A, Part I of two parts, dated 20 August 1976.

4. Description of Test Article. The AN/TRN-41 system was tested during the performance tests. Test configurations are shown in Appendix III of the Equipment Test Plan referenced above.

5. Summary of Test Results. Table 1 provides a summary of test results. The requirement tested is listed with reference paragraphs in 404L-701-5017A, Part I of two parts, the specification, the test procedure in the Equipment Test Plan, and a statement of results.

6. Description of Test Facility and Procedures. The test facilities and test procedures are described in Appendix III of the Equipment Test Plan.

7. Test Setup Diagrams. The test setup diagrams are provided in Appendix III of the Equipment Test Plan.

8. List of Test Equipment. The following is a list of test equipment used, with manufacturer and model number, and with serial number and calibration date, if applicable. The signal generator used was an HP 612A, but was not within calibration; however, the frequency and power from the signal generator was measured using calibrated equipment during the test, so calibration was not required.

RANDOM PULSE DISTRIBUTION LIMITS
A MINIMUM OF 1000 READINGS OF THE SPACING OF THE 2700 RANDOM PULSES SHALL BE TAKEN. THE DATA NEED ONLY BE RECORDED TO THE NEAREST 25μ SEC INTERVAL
COMPUTE THE RELATIVE OCCURRENCE
= NUMBER OF READINGS IN EACH INTERVAL / TOTAL NUMBER OF READINGS
AT LEAST 87% OF THE POINTS MUST FALL BETWEEN THE SOLID LINES, 5% MAY FALL BETWEEN THE UPPER DOTTED AND UPPER SOLID LINES, 5% MAY FALL BETWEEN THE LOWER SOLID AND DOTTED LINES, 3% MAY FALL IN THE REGION OUTSIDE OF THE DOTTED LINES.
