Appendix II - List of References as Divided into Subject Categories	7
Appendix III - List of Key Words	9
Appendix IV - Copyright	12
Appendix V - Documentation	23

Introduction

The purpose of this Library Search was to collect, review and make documentation of Eastern European (including German) and Russian literature on the subject of icebreaker design and construction. Special reference was given to structural design, propulsion and to materials and processes used in construction, as well as to physical properties of ice, to icebreaking theory and methods and to problems related to the interaction between the icebreakers and ice. Other pertinent areas, including fracture, fatigue and corrosion resistance were also included.

The work was performed from September, 1966, until April, 1968. The sources of information collected were limited to unclassified serials and books available in American libraries. Generally, publications which appeared between the years 1956 and 1966 were included in the search.

This report describes the main features of the work, its extent, sources and results. It also includes technical information on the documentation and on copyright clearance.

Extent of Work

The main attention was concentrated on a group of selected periodicals, which was modified in course of the work. Many of the journals were available only in the Library of Congress, which thus

became the primary source of material. Among others, the John Hay Library of Brown University was particularly useful, while several other libraries, located in Washington, D.C., New York City, and Boston, have also provided a part of the serials searched.

The periodicals which were searched are listed in Appendix I. With a few exceptions, all issues of the listed journals, as they appeared between 1956 and 1966, were located. In some cases, even a part of the year 1967 was included.

Because of the special nature of the subject, only Russian and German literature was found useful. In fact, most references were taken from Russian journals. Where available, English translations were used instead of the original version.

Results and Documentation

The total number of articles and books which were included in the search amounts to 518. Those were divided into ten subject categories suggested by the U. S. Coast Guard. In each category, references were numbered in sequence. The resulting identification numbers consisted of five digits, as shown in Appendix II. The list gives also the Field and Group numbers according to the Cosati Subject Category List (DoD-Modified) of October, 1965.

The documentation of each article and book included in the search was done in the following manner:

- a) Three photostatic copies were made; two for the U. S.

Coast Guard and one to be included in a separate set submitted to the Defense Documentation Center, Cameron Station, Alexandria, Virginia. In some cases, a fourth copy was made for the contractor. Only title pages and lists of contents were copied in case of books and very long articles.

- b) Two separate forms were attached to each copy described in a). The first included bibliographical references and an annotated comment to each article, while the second listed pertinent key words. The key words were proposed by the contractor with regard to the nature of the work. They are listed in Appendix III.

The purpose of the annotated comments and key words was to enable an easy evaluation of the contents, level and nature of individual articles. Where pertinent, translation was either recommended or suggested as optional. When a translation was known to exist, its reference was given.

- c) Two sets of cards for Libsys Computer Program. Those cards included the identification numbers, bibliographical references, comments and key words for each article, as described in b).
- d) One printout of the Libsys Computer Program input. A copy of this printout was included with each shipment of Libsys card input. Another copy is attached in Appendix V.

- e) One set of copies of all articles, with their summaries and key words, was submitted to the Defense Documentation Center, Cameron Station, Alexandria, Virginia, 22314, to incorporate the results obtained in this work into DDC holding.

Copyright clearance was obtained for all material which was originally covered, i.e., for all German articles and for the English translations of Russian journals. Appendix IV on copyright includes copies of letters which were mailed to copyright owners and a copy of the Clause 9-203(d) Rights in Technical Data-Specific Acquisition (May 1964). This Clause was enclosed with each request for copyright clearance. Permissions were obtained from all copyright owners and the respective letters are also enclosed in Appendix IV.

Acknowledgement

The author wishes to acknowledge the financial support for this work by the U. S. Coast Guard under contract Tcg 16,024-A.

APPENDIX I

LIST OF SERIALS SEARCHED

A) Russian Scientific and Technical Journals

1. Atomnaya Energija (Russian Journal of Atomic Energy)
2. Avtomaticheskaja Svarka (Russian Journal of Automatic Welding)
3. Doklady Akademii Nauk SSSR (Transactions of the Academy of Sciences of USSR)
4. Fizika Metallov i Metallovedenie (Physics of Metals and Material Science)
5. Gidrotekhnicheskoe Stroitel'stvo (Hydrotechnical Engineering)
6. Izvestija Akademii Nauk SSSR - Mekhanika (Proceedings of the Academy of Sciences of USSR-Mechanics)
7. Izvestija Akademii Nauk SSSR - Energetika i Transport (Energetics and Transport)
8. Izvestija Akademii Nauk SSSR - Seriya Metally (Metals)
9. Izvestija Vysshikh Uchebnykh Zavedenij (Proceedings of State Universities), Mashinostroenie (Machine Building)
10. Izvestija Sibirskogo Otdelenija AN SSSR, Seriya Tekhnicheskikh Nauk (Proceedings of the Siberian Section of the Academy of Sciences USSR, Technical Sciences Series)
11. Inzhenernyj Zhurnal (Engineering Journal)
12. Mashinovedenie (Mechanical Engineering)
13. Metallovedenie i Termicheskaja Obrabotka Metallov (Material Science and Heat Treatment)
14. Morskoi Flot (Navy)
15. Morskoi Sbornik (Sea Volume)
16. Problemy Arktiki i Antarktiki (Problems of the Arctic and Antarctic)

17. Rechnoj Transport (River Transport)
18. Sudostroenie (Shipbuilding)
19. Svarochnoe Proizvodstvo (Welding Production)
20. Trudy CNII Morskogo Flota (Leningrad). (Transactions of the Central Scientific Research Institute of the Navy).
21. Trudy CNII Rechnogo Flota (Leningrad). (Transactions of the Central Scientific Research Institute of the River Fleet).
22. Trudy CNII Sudostroitel'noj Proymchlenosti (Leningrad). (Transactions of the Central Scientific Research Institute of Shipbuilding Industry).
23. Trudy Instituta Inzhenerov Vodnogo Transporta (Leningrad). (Transactions of the Institute of Engineers of Water Transportation).
24. Trudy Instituta Vodnogo Transporta (Transactions of the Institute of Water Transportation).
25. Trudy Korablestroitel'nogo Instituta (Leningrad). (Transactions of the Shipbuilding Institute).
26. Uchennye Zapiski Vyshego Arkticheskogo Morskogo Uchilishcha (Leningrad). (Scientific Memoirs of the Arctic and Naval College).
27. Vodnyj Transport - Referativnyj Zhurnal (Water Transport - Journal of Abstracts).
28. Zavodskaja Laboratorija -(Russian Journal Industrial Laboratory).

B) German Technical Journals

29. Jahrbuch der Schifffahrt.
30. Jahrbuch der Schiffbautechnischen Gesellschaft.

The Instrument Society of America
313 Sixth Avenue
Pittsburgh 22, Pennsylvania

Dear Sirs:

I would like to ask you for permission to make photostatic copies from your translation of the Russian Journal Industrial Laboratory. The request is being made in connection with a literature survey which I am making for the U. S. Coast Guard on some aspects of icebreaker construction and design.

The exact extent of the permission requested hereby is described in the enclosed clause of my contract with the U. S. Government (9-203(d) Rights in Technical Data-Specific Acquisition, May 1964). The permission should cover all volumes of the said journal published after January 1, 1956. In each case, proper reference to the title and issue of the journal will be made.

I am presently associated with the Division of Engineering at Brown University, Providence, Rhode Island 02912. My new address, as of September 1, 1967, will be:

Professor J. Dvorak
Department of Civil Engineering
Duke University
Durham, North Carolina 27706

I am looking forward to your answer.

Yours very sincerely,

J. Dvorak

Enclosure

CLAUSE

9-203(d) RIGHTS IN TECHNICAL DATA-SPECIFIC ACQUISITION (MAY 1964)

(a) Definition. Technical Data as used in this clause means technical writings, sound recordings, pictorial reproductions, drawings, or other graphic representations and works of a technical nature, whether or not copyrighted, which are specified to be delivered pursuant to this contract. The term does not include financial reports, cost analyses, and other information incidental to contract administration.

(b) Government Rights. The Government may duplicate, use and disclose in any manner and for any purpose whatsoever, and have others so do, all or any part of the technical data delivered by the Contractor to the Government under this contract.

(c) Material Covered by Copyright.

(1) The Contractor agrees to and does hereby grant to the Government, and to its officers, agents, and employees acting within the scope of their official duties, a royalty-free, nonexclusive and irrevocable license throughout the world for Government purposes to publish, translate, reproduce, deliver, perform, dispose of, and to authorize others so to do, all technical data now or hereafter covered by copyright.

(2) No such copyrighted matter shall be included in technical data furnished hereunder without the written permission of the copyright owner for the Government to use such copyrighted matter in the manner above described.

(3) The Contractor shall report to the Government (or higher-tier Contractor) promptly and in reasonable written detail each notice or claim of copyright infringement received by the Contractor with respect to any technical data delivered hereunder.

(d) Relation to Patents. Nothing contained in this clause shall imply a license to the Government under any patent, or be construed as affecting the scope of any license or other right otherwise granted to the Government under any patent.

(e) Limitation on Charges for Data. The Contractor recognizes that the Government, or a foreign government with funds derived through the Military Assistance Program or otherwise through the United States Government, may contract for property or services with respect to which the vendor may be liable to the Contractor for charges for the use of technical data on account of such a contract. The Contractor further recognizes that it is the policy of the Government not to pay in connection with its contracts, or to allow to be paid in connection with contracts made with funds derived through the Military Assistance Program or otherwise through the United States Government, charges for data which the Government has a right to use and disclose to others, which is in the public domain, which the Government has been given without restrictions upon its use and disclosure to others. This policy does not apply to reasonable reproduction, handling, mailing, and similar administrative costs incident to the furnishing of such data. In recognition of this policy, the Contractor agrees to participate in and make appropriate arrangements for the exclusion of such charges from such contracts, or for the refund of amounts received by the Contractor with respect to any such charges not so excluded.

Dear Professor Dvorak:

Please forgive the long delay in responding to your letter of August 3rd to The Instrument Society of America concerning your request to make photostatic copies from our translation of the Russian Journal Industrial Laboratory. In recent months the copy-right of this journal has been transferred from The Instrument Society to us.

We would be delighted to give you permission to reproduce certain items from our journal, however, before we do so it is necessary for us to have a list of those pages you wish to copy. We look forward to hearing from you.

Sincerely yours,

Robert N. Ubell

Dear Mr. Ubell:

Thank you very much for your letter of November 1 concerning the permission to make copies from the Russian Journal Industrial Laboratory.

As you have requested, I enclose herewith a list of pages which I would like to copy, Volumes and numbers refer to both the original and translation and pages only to the latter.

I look forward to receiving the permission.

Yours sincerely,

J. Dvorak

Dear Sir,

Thank you for your letter of 3 August requesting permission to make photostatic copies from our translation of the Russian journal 'Automatic Welding'.

As you may know this work is carried out under a special grant from the British Government, and the translation is therefore Crown copyright.

However, we are prepared to grant permission for you to take copies from the issues you mention (from 1 January, 1956) subject to the usual acknowledgement, i.e.:

"This copy is made from the Russian journal 'Automatic Welding' translated by the British Welding Research Association for the Department of Education and Science."

Yours faithfully,

Sehr geehrter Herr Professor !

Bezug nehmend auf Ihr Schreiben vom 3.8.1967 erteilen wir
Ihnen die Genehmigung, Fotokopien aus unserer Zeitschrift
"Schiffbautechnik" für den von Ihnen genannten Zweck anfer-
tigen zu lassen.

Diese Genehmigung gilt für sämtliche Jahrgänge ab 1956.

Wir möchten Sie noch einmal darauf aufmerksam machen, daß
in jedem Fall korrekte Quellenangaben zu machen sind.

Fotokopien aus "Jahrbuch der Schifffahrt"

Sehr geehrter Herr Professor Dvorak!

Wir erlauben Ihnen hiermit, die von Ihnen gewünschten Fotokopien von Typendarstellungen beziehungsweise Bildveröffentlichungen aus beliebigen Jahrgängen unseres "Jahrbuch der Schifffahrt" vorzunehmen.

Wie Sie schon in Ihrem Schreiben vom 3. August 1967 angeben, bitten wir in diesem Zusammenhang um Angabe der Quelle, wenn eine Veröffentlichung vorgesehen werden soll.

Wir wären Ihnen dankbar, wenn Sie uns im Falle der Veröffentlichung ein Belegexemplar schicken könnten.

Mit freundlichen Grüßen

USE OF COMPRESSED AIR FOR CLEANING OF SHIP ROUTES FROM ICE.=

RECHNOJ TRANSPORT, 16, DEC 1957, PP. 40-41

THIS IS A SHORT DESCRIPTION OF THE TITLE SUBJECT. IT IS BASED ON PRACTICAL EXPERIENCE GAINED IN SWEDEN AND ELSEWHERE. THE COMPRESSED AIR

DEVICE IS A PERFORATED TUBE LAYING ON THE BOTTOM AND CONNECTED TO AN AIR COMPRESSOR. WHEN AIR IS LED INTO THE TUBE, IT ESCAPES AND THE BUBBLES CARRY WITH THEM PARTICLES OF WARM WATER WHICH DISSOLVES THE ICE. HOWEVER, THIS DEVICE MAY BE SUCCESSFULLY USED ONLY IN CASES THAT WATER DOES NOT MOVE MUCH SO THAT THERE ARE WARMER LAYERS AT THE BOTTOM. THE BEST USE IS POSSIBLE ON SOME LAKES IN SWEDEN. THERE, ICE UP TO 25 IN. WAS DISSOLVED AFTER ABOUT TWO WEEKS OF WORK OF THE EQUIPMENT. A CHANNEL 17-19 YARDS WIDE WAS FORMED. IT IS PROPOSED THAT FOR A 62 MILE LONG CHANNEL, 20 YARDS WIDE, 10 000 CUBIC YARDS PER HOUR OF AIR. TUBE DIAMETER 1.5 IN., PERFORMATIONS EVERY 15 YARDS. POSSIBLE USE IN THE SOVIET UNION IS DISCUSSED. TRANSLATION OPTIONAL.

EPOXY COATINGS FOR CORROSION PROTECTION OF SHIP STRUCTURAL PARTS.=

SUDOSTROENIE, 27, MAY 1961, PP. 41-45

VARIOUS EPOXY COATINGS, THEIR MECHANICAL PROPERTIES, ADHESION CHARACTERISTICS AND OTHER TECHNOLOGICAL DETAILS ARE DESCRIBED. SOME TEST METHODS OF THESE PROPERTIES ARE MENTIONED. SPECIAL ATTENTION IS GIVEN TO TECHNOLOGY OF APPLICATION AND TO EXPERIENCE OBTAINED DURING USE OF COLD CURED MULTI-LAYERED REINFORCED COATINGS ON SOME SHIP PARTS LIKE SHAFTS, PIPING, PUMPS, PROPELLER BLADES AND SHAFTS, ETC. SOME REFERENCE TO AMERICAN TECHNIQUES IS GIVEN. TRANSLATION OPTIONAL.

A NEW PROTECTIVE COATING FOR METAL SURFACES.

=
SUDOSTROENIE, 25, JUN 1959, PP. 30-32

THE PROTECTIVE COATING DESCRIBED IS BASED ON A PERCHLORVINYL RESIN WHICH IS A PVC RESIN ENRICHED BY 64-65 PER CENT OF CHLORINE. IT IS STABLE FROM -45 DEGREE C TO +170 DEGREE C (I.E. -49 TO +338 DEGREE F), EASY TO APPLY, HAS EXCELLENT PROTECTIVE PROPERTIES, REASONABLE STRENGTH AND OTHER PROPERTIES SUITABLE FOR ITS USE FOR CORROSION PROTECTION OF WELDED SHIP HULLS. THE TECHNOLOGY OF APPLICATION AND OTHER IMPORTANT DATA ARE DESCRIBED IN DETAIL. TRANSLATION OPTIONAL.

A NEW PROTECTIVE COATING FOR METAL SURFACES.

=
SUDOSTROENIE, 25, JUN 1959, PP. 30-32
THE PROTECTIVE COATING DESCRIBED IS BASED ON A PERCHLORVINYL RESIN WHICH IS A PVC RESIN ENRICHED BY 64-65 PER CENT OF CHLORINE. IT IS STABLE FROM -45 DEGREE C TO +170 DEGREE C (I.E. -49 TO +338 DEGREE F), EASY TO APPLY, HAS EXCELLENT PROTECTIVE PROPERTIES, REASONABLE STRENGTH AND OTHER PROPERTIES SUITABLE FOR ITS USE FOR CORROSION PROTECTION OF WELDED SHIP HULLS. THE TECHNOLOGY OF APPLICATION AND OTHER IMPORTANT DATA ARE DESCRIBED IN DETAIL. TRANSLATION OPTIONAL.

SCIENTIFIC INVESTIGATIONS IN THE ARCTIC.=

MORSKOJ FLOT, 17, DEC 1957, PP. 4-5

THIS IS A GENERAL ARTICLE WHICH DESCRIBES VARIOUS ASPECTS OF RESEARCH IN THE ARCTIC. FIRST, A BRIEF HISTORY SINCE 1920 IS GIVEN, AND USE OF STEAM ICEBREAKERS IN EARLY THIRTIES IS MENTIONED. MAIN ACTIVITIES DISCUSSED ARE OBSERVATION OF ICE SITUATION AND FORECASTS, WEATHER FORECASTS, GEOPHYSICAL AND HYDROLOGICAL RESEARCH, CLEARING OF SEA ROUTES BY STAINING OF ICE FROM AIRPLANES, ETC.

DURING THE LAST 25 YEARS, ABOUT 400 SCIENTIFIC EXPEDITIONS HAVE BEEN ACCOMPLISHED BY RUSSIAN INVESTIGATORS IN THE ARCTIC. MANY OF THOSE EMPLOYED ICEBREAKERS. A BRIEF ACCOUNT OF ORGANIZATION OF SUCH RESEARCH IS GIVEN. WORLD PRIORITY IN THE FIELD IS CLAIMED. TRANSLATION OPTIONAL.

A HIGH-LATITUDE EXPEDITION ON THE NUCLEAR ICEBREAKER LENIN IN 1961.=

PROBLEMY ARKTIKI I ANARKTIKI, P. 107-109

THIS IS A SHORT ACCOUNT OF AN EXPEDITION ON THE LENIN ICEBREAKER. IT TOOK PLACE IN FALL OF 1961 IN ORDER TO ESTABLISH A NEW RESEARCH AND OBSERVATION SITE NORTH POLE 10. IN ADDITION, 15 AUTOMATIC RADIO METEOROLOGICAL STATIONS WERE ESTABLISHED. IT WAS ALSO VERIFIED THAT THE LENIN ICEBREAKER IS SUITABLE FOR NAVIGATION AT HIGH LATITUDES DURING THE PERIOD OF POLAR WINTER AND NIGHT.

KOMANDIN, N.L.

USE OF THE STEEL SKHL-1 IN SHIPBUILDING.=

RECHNOJ TRANSPORT, 16, DEC 1957, PP. 17-19

THIS IS A DETAILED DESCRIPTION OF THE MECHANICAL PROPERTIES AS FUNCTIONS OF SHEET THICKNESS AND OF WELDABILITY OF THE TITLE STEEL. IT WAS

PROBABLY THE FIRST LOW-ALLOY STEEL USED IN RUSSIAN SHIPBUILDING AND SINCE THEN TWO MORE SKHL STEELS HAVE APPEARED (NO. 4 AND 45 - SEE REF. 110). THE DISCUSSED STEEL CONTAINS 0.12-0.18 C, 0.4-0.7 SI, 0.6-0.9 CR, 0.3-0.6 NI AND 0.2-0.4 CU. ITS YIELD STRENGTH IS 50 KSI. MANY

TABLES OF MECHANICAL PROPERTIES ARE INCLUDED AS WELL AS RESULTS FROM WELD EXAMINATIONS. IT

IS CONCLUDED THAT ALTHOUGH NOT IDEAL, THE STEEL REPRESENTED CONSIDERABLE PROGRESS IN RUSSIAN SHIPBUILDING AND WAS SUCCESSFULLY USED FOR A

TANKER AND FOR A RIVER PASSENGER SHIP.

RUSSO, V.L.

INFLUENCE OF VIBRATIONS ON CRYSTALLIZATION OF THE WELD METAL.=

SUDOSTROENIE, 24, APR 1958, PP. 37-41

THIS IS A RATHER DETAILED DESCRIPTION OF AN EXPERIMENTAL INVESTIGATION ON THE TITLE TOPIC.

BOTH LOW AND HIGH FREQUENCY VIBRATIONS WERE USED. IT IS CONCLUDED THAT LOW FREQUENCY VIBRATIONS (30-50 HZ), WHEN APPLIED TO THE CRYSTALLIZING METAL, IMPROVE CONSIDERABLY NOTCH IMPACT PROPERTIES OF A LOW-ALLOY CR-NI-MO STEEL. THE EFFECT IS CONNECTED WITH REFINING INFLUENCE OF VIBRATIONS ON AUSTENITIC GRAIN SIZE.

HIGH FREQUENCY VIBRATIONS (20KHZ) SHOW FAVORABLE EFFECT ON CRYSTALLIZATION OF A AL-MG WELDED ALLOY AND LEAD TO A MORE UNIFORM DISTRIBUTION OF INTERGRANULAR PHASE.

USE OF PLASTICS ON THE NUCLEAR ICEBREAKER LENIN.=

SUDOSTROENIE, 27, AUG 1961, PP. 58-60

THIS ARTICLE HAS APPEARED AS THE LAST ONE IN A SPECIAL NUMBER OF SUDOSTROENIE DEVOTED TO ICEBREAKER LENIN ONLY.

IT DESCRIBES IN GENERAL TERMS THE USE OF PVC PLASTICS IN INTERIOR DESIGN OF THE ICEBREAKER.

WELDING PROCEDURES ARE BRIEFLY DISCUSSED. NO DETAILS ARE GIVEN.

CLADED (DOUBLE-LAYERED) STEEL AND ITS USE IN SHIPBUILDING.=

SUDOSTROENIE, 27, NOV 1961, PP. 57-60

VARIOUS ASPECTS OF USE OF CLADED STEELS ARE DISCUSSED IN RATHER GENERAL TERMS. MAINLY, PROTECTION AGAINST CORROSION IS CONSIDERED. SOME COMPARISON OF MECHANICAL PROPERTIES OF CLADED AND UNCLADED STEELS IS GIVEN, AS WELL AS SPECIFIC TECHNOLOGY AND WELDING. THE ARTICLE CONTAINS ALSO DETAILED INFORMATION, BUT ONLY OF LIMITED NATURE, DESCRIBING MECHANICAL WORKING AND WELDING OF FEW PARTICULAR STEELS.

WELDABILITY INVESTIGATION OF THERMALLY-STRENGTHENED CARBON STEEL 20 C. =	24005	514
SUDOSTROENIE, 29, JAN 1963, PP. 51-54	24005	515
THIS ARTICLE DESCRIBES TESTS WHICH ARE TO CHARACTERIZE WELDABILITY OF THE MENTIONED STEEL.	24005	516
THE THERMALLY-STRENGTHENED CARBON STEEL 20 C IS CONSIDERED AS A SUBSTITUTE FOR MORE EXPENSIVE LOW-ALLOY STEELS WITH YIELD LIMIT LARGER THAN 35 KG/MM ² (I.E. 50 KSI). THE STEEL ITSELF IS NOT DESCRIBED.	24005	517
BOTH AUTOMATIC AND MANUAL WELDING WAS USED ON PLATES 10 AND 32 MM (I.E. 0.4 AND 1.25 IN.). ONLY EMPIRICAL TESTING METHODS ARE USED BENDING TESTS OF SPECIMENS WITH WELDS AND SURFACE WELD-BEADS, IMPACT ROUND NOTCH TESTS, DROP-WEIGHT TESTS ON 4 WELDED BEAMS. IN ADDITION, LIMITED METALLOGRAPHIC STUDIES OF THE WELD WERE MADE. THE RESULTS SHOW THAT THE TESTED WELDMENTS ARE SAFE AGAINST BRITTLE FRACTURE AT -25 DEGREES C AND THAT THE ORIGINAL STRENGTHENING WAS NOT IMPAIRED BY SUBSEQUENT WELDING.	24005	518
HOWEVER, SUCH CONCLUSIONS ARE NOT FULLY JUSTIFIED SINCE THE METHODS USED ARE OBSOLETE AND UNRELIABLE.	24005	519

3 MAGNESIUM ALLOYS AND 1 ALUMINUM ALLOY. THE TESTING SPEED WAS FROM 2 TO 16 M/SEC (6.5 TO 52.55 FPS). RESULTS SHOW, ALMOST INVARIABLY, A SHARP INCREASE IN CORROSION RATE WITH SPEED, PARTICULARLY FOR HIGH SPEEDS.

AUSTENITIC STAINLESS STEELS, ALUMINUM BRONZES AND BRASSES SHOW LESS THAN 0.01 IN. OF CORRODED DEPTH PER YEAR AT HIGHEST SPEED. COPPER SHOWS MORE THAN TWICE AS MUCH, WHILE STEELS DISPLAY ABOUT 10 TIMES OF THE FORMER RATE, ALUMINUM ALLOYS AND MAGNESIUM ALLOYS ARE MUCH WORSE.

NO STRESS CORROSION TESTS ARE MENTIONED, AND THE INFLUENCE OF TEMPERATURE, WELDING, STRESS CONCENTRATIONS, ETC. IS NEGLECTED. TRANSLATION OPTIONAL.

HEAT STRENGTHENED CARBON STEEL FOR SHIPBUILDING.=

SUDOSTROENIE, 28, SEP 1962, PP. 44-48

THIS IS A DESCRIPTION OF HEAT TREATMENT OF A 20 C CARBON STEEL WHICH MAY BE STRENGTHENED UP TO 35 KG/MM2 (ABOUT 50 KSI) IN YIELD STRENGTH.

THIS IS DONE MERELY FOR ECONOMICAL REASONS, NAMELY BECAUSE NICKEL AND COPPER ARE DEFICIENT IN RUSSIA AND MAKE LOW-ALLOY STEELS LESS AVAILABLE. ALTHOUGH MECHANICAL PROPERTIES AND BRITTLENESS COMPARE REASONABLY WITH THOSE OF LOW-ALLOY STEELS, NO COMMENT IS MADE ON WELDABILITY, CORROSION RESISTANCE, ETC.

ON SOME PROBLEMS OF CORROSION PROTECTION OF A SHIP HULL (FROM PRACTICE OF HOLLAND SHIPBUILDERS).=

SUDOSTROENIE, 24, SEP 1958, PP. 76-77

THIS IS A REVIEW ARTICLE BASED MAINLY ON INFORMATION ABOUT CORROSION PROTECTION PRACTICE ON THE DE SCHELDE SHIPYARD. FOLLOWING TOPICS ARE DISCUSSED REMOVAL OF ROLLING SCALE FROM STEEL PLATES. THE SCALE IS A SUBSTANTIAL CORROSION ACCELERATOR AND MAY BE REMOVED EFFECTIVELY BY GRIT BLASTING. THEN A COMPOUND (ACRO-BET) IS MENTIONED WHICH IS USED TO CONVERT RUST INTO PHOSPHATES WHICH PROTECT STEEL AGAINST FURTHER CORROSION. SINCE WELDS SERIOUSLY IMPAIR CORROSION RESISTANCE, VARIOUS TECHNIQUES, BOTH WELDING AND PROTECTIVE, ARE DISCUSSED. TRANSLATION OPTIONAL.

EST RESULTS ARE PRESENTED FOR A CARBON AND FOR
SOME LOW-ALLOY SHIPBUILDING STEELS. IMPLICAT-
IONS TO POSSIBLE BRITTLE FRACTURE INITIATION A-
RE DISCUSSED. THOSE DO NOT SEEM TO BE VERY ME-
ANINGFUL. FURTHER EXPERIMENTS ARE PROPOSED.

LOW-CYCLE FATIGUE STRENGTH OF SOME SHIPBUIL-
DING METALLIC MATERIALS, TESTED IN BENDING. =

TRUDY C.N.I.I. MORSKOGO FLOTA 57, 1964, P. 76-
88

THIS IS AN EXTENSIVE EXPERIMENTAL STUDY ON THE
TITLE TOPIC WHICH COVERS MANY STEELS AND ALUM-
INUM ALLOYS. LARGE STRAIN AMPLITUDES (UP TO 1
(1) WERE USED. THE RESULTS ARE USEFUL FOR THE
PURPOSE OF PERFORMANCE COMPARISON OF VARIOUS S-
HIPBUILDING MATERIALS. OBSERVATIONS OF FATIGU-
E CRACK GROWTH AND OF ITS CONVERSION INTO BRIT-
TLE FRACTURE ARE BRIEFLY REPORTED.

I. CORROSION-FATIGUE STRENGTH OF STEEL SPEC
IMENS WHICH WERE METALLIZED BY THE STAINLESS S
TEEL 1 KH TRN9T.

TRUDY C.N.I.I. MORSKOGO FLOTA 22, 1959, P. 5-1
9

THIS IS AN EXTENSIVE AND INTERESTING PAPER ON
THE TITLE SUBJECT. THE STAINLESS STEEL USED I
S A 18 CR-8NI TYPE WITH TITANIUM. A VARIETY O
F EFFECTS IS INVESTIGATED, INCLUDING SIZE EFFE
CTS. THE MAIN CONCLUSION REMAINS, THAT THE PR
OTECTIVE COATING IS USEFUL ONLY IF FATIGUE CRA
CK INITIATION IS PREVENTED IN THE BASE MATERIA
L. THIS CAN BE ACHIEVED BY INTRODUCTION OF SU
RFACE COMPRESSIVE RESIDUAL STRESSES BY SURFACE
WORKING. IF CRACKS ARE PERMITTED TO BE FORME
ED, THE PROTECTION IS OF NO USE. THE CONTEMP
ATED AREA OF APPLICATION OF THE COATING IS IN
PROPELLER SHAFTS. IT IS CONCLUDED THAT METALL
IZING IS OF LITTLE USE IN SUCH CASES EXCEPT FO
R SHAFTS WITH VERY LOW WORKING LOADS.

II. CORROSION-FATIGUE STRENGTH OF SOME STEE
LS IN SEA WATER.

TRUDY C.N.I.I. MORSKOGO FLOTA 22, 1959, P. 20-
26

THIS IS A SHORT ACCOUNT OF FATIGUE EXPERIMENTS
WHICH WERE PERFORMED IN REVERSED BENDING AND
SPECIMENS WERE EXPOSED TO A CORROSIVE MEDIUM.

13 STEELS OF VARIOUS GRADES WERE TESTED. THE
CORROSIVE MEDIUM WAS A 3% SOLUTION OF NA Cl I
N WATER. EARLIER TESTS HAVE SHOWN THAT IT REP
RESENTS A GOOD SUBSTITUTE FOR SEA WATER.

BEST RESULTS WERE OBTAINED WITH AUSTENITIC STA
INLESS STEELS. MARTENSITIC STAINLESS STEEL SH
OWED A DROP IN FATIGUE STRENGTH BY A FACTOR OF

2. HIGH-STRENGTH CARBON STEELS SHOWED WORSE
BEHAVIOR, THE DROP BEING BY A FACTOR OF 10. C
ARBON AND LOW-ALLOY STEELS SHOWED A DROP BY A
FACTOR OF 2 TO 4.5. ALL TESTS WERE PERFORMED
FOR ABOUT 10 CYCLES.

III. INFLUENCE OF STRESS CONCENTRATORS ON CORROSION-FATIGUE STRENGTH OF SOME STEELS AND ALUMINUM ALLOYS IN SEA WATER. =	24021	201
TRUDY C.N.I.I. MORSKOGO FLOTA 22, 1959, P. 27-36	24021	202
THIS IS AN INTERESTING STUDY WHICH REVEALS BASIC FEATURES OF STRESS-CORROSION DAMAGE TO STEELS AND ALUMINUM ALLOYS. IN PRINCIPLE, SHARP STRESS CONCENTRATORS FACILITATE FATIGUE DAMAGE CONSIDERABLY. CORROSION DAMAGE IS BENEFICIAL PROVIDING THAT IT CAUSES EFFECTIVE BLUNTING OF STRESS CONCENTRATORS. THIS IS A USUAL CASE IN STEEL. IN ALUMINUM ALLOYS, HOWEVER, LIKE IN MOST OTHER CORROSION-RESISTANT ALLOYS, THE CORROSION DAMAGE IS LIMITED AND RATHER CONTRIBUTES TO FAILURE.	24021	203
INFLUENCE OF VARIOUS FACTORS OF THE FATIGUE CYCLING REGIME AND OTHER EFFECTS ARE EVALUATED.	24021	251

IV. THE INFLUENCE OF SPECIMEN SIZE ON CORROSION-FATIGUE STRENGTH OF STEEL. =	24021	505
TRUDY C.N.I.I. MORSKOGO FLOTA 22, 1959, P. 37-44	24021	506
EXPERIMENTS ON THE TITLE TOPIC WERE PERFORMED WITH CARBON STEEL BOTH IN CLEAN AND SALT WATER. THE EFFECT OF SIZE IS RELATED TO STRESS AMPLITUDE AND TO THE NUMBER OF CYCLES. SEVERAL TENTATIVE CONCLUSIONS WERE REACHED WITH LITTLE EXPERIMENTAL OR THEORETICAL JUSTIFICATION.	24021	507

V. RELATION BETWEEN CORROSION-FATIGUE STRENGTH IN BENDING AND IN TORSION. =	24021	701
TRUDY C.N.I.I. MORSKOGO FLOTA 22, 1959, P. 45-50	24021	702
THIS IS A SHORT DESCRIPTION OF SIMPLE EXPERIMENTS PERFORMED ON SMOOTH SPECIMENS OF MILD STEEL IN AIR AND IN SALT WATER, RESPECTIVELY. IT APPEARS THAT THE APPRECIABLE DIFFERENCES OBSERVED IN AIR TESTS WERE ESSENTIALLY ELIMINATED FOR TESTS IN SALT WATER, ESPECIALLY FOR LARGER NUMBER OF CYCLES.	24021	703

A LARGE VARIETY OF LOW MEDIUM AND HIGH STRENGTH STEELS IS LISTED AND THEIR PROPERTIES, COMPOSITION AND WELDABILITY ARE EVALUATED. REQUIREMENTS OF VARIOUS REGISTERS ARE LISTED. MODERN PRODUCTION METHODS ARE NOTED AND A LIST OF CONTEMPORARY TESTING METHODS, INCLUDING WELDABILITY TESTING, IS GIVEN. TRANSLATION OPTIONAL.

DICK, W.

THE SURFACE OF A SHIPBUILDING STEEL SHEET.
A CONTEMPORARY VIEWPOINT. =

JAHRBUCH SCHIFFBAUTECHN. GES. 59, 1965, P. 83-92

THIS IS A SHORT SURVEY ON THE TITLE TOPIC. IT INCLUDES INTERNATIONAL STANDARDS OF DEFINITIONS FOR SURFACES, BASIC PROPERTIES OF ROLLED SURFACES, THE INFLUENCE OF SCALE, MODERN PREPARATION AND PROTECTION OF SURFACES AND POSSIBLE WAYS OF IMPROVEMENTS AS BASED ON RECENT RESEARCH RESULTS. AN EXTENSIVE DISCUSSION IS INCLUDED AND ABOUT 38 REFERENCES LISTED. TRANSLATION OPTIONAL.

BRONZE PROPELLERS AND THEIR MAINTENANCE. =

JAHRBUCH SCHIFFBAUTECHN. GES. 59, 1965, P. 93-101

AN ATTEMPT IS MADE TO INDICATE THE MAJOR DIFFERENCES BETWEEN THE THREE MAIN GROUPS OF COPPER-BASE ALLOYS USED FOR LARGE PROPELLER MANUFACTURE. THOSE INCLUDE HIGH-TENSILE BRASSES, ALUMINUM BRONZES AND MANGANESE-ALUMINUM BRONZES. SPECIFIC MAINTENANCE PROCEDURES MUST BE FOLLOWED ACCORDING TO THE PROPELLER MATERIAL. IN ENGLISH.

AUTOMATIC WELDING, JULY 1960, PP. 18-23	24090	703
THIS IS A GENERAL DISCUSSION ON USE OF SHEET STEEL IN THE DESIGN OF WELDED STRUCTURES. THE AMOUNT OF WELDING IS REDUCED BY WIDE EMPLOYMENT OF BENDING CLOSED BOX TYPE OR TUBULAR SECTIONS ARE USED TO OBTAIN MAXIMUM STIFFNESS, AND HOLLOW COMPONENTS ARE SEALED HERMETICALLY TO PREVENT INTERNAL CORROSION. ELECTRODES FOR WELDING SHIP HULL SKINS MADE OF SKHL STEELS.=	24091	502
AUTOMATIC WELDING, AUG. 1960 P. 26-32	24091	503
THIS IS A DETAILED DESCRIPTION OF COMPOSITION AND PROPERTIES OF THE AN-KH 7 ELECTRODES WHICH PROVIDE WELDED JOINTS WITH SATISFACTORY MECHANICAL PROPERTIES. THE CORROSION RESISTANCE OF WELDS IS EQUAL TO THAT OF THE PARENT METAL. THIS IS ACHIEVED MAINLY BY AN ADDITION OF 7-8% OF PERCHROMIUM TO ELECTRODE COATING. THE SKHL TYPE OF STEELS IS REPRESENTED BY 10 KH AND STEEL (0.08 C, 0.61 MN, 0.80 SI, 0.89 CR., 0.80 NI, 0.41 CU). IN ENGLISH.	24091	504

A METHOD FOR DETERMINING THE IMPACT STRENGTH OF STEEL BY FRACTURE ANALYSIS.=	24094	101
INDUSTRIAL LABORATORY, 27, DEC. 1961, P. 1510-1514.	24094	102
THIS IS A SHORT DESCRIPTION OF AN EMPIRICAL METHOD WHICH IS PROPOSED FOR DETERMINATION OF THE IMPACT STRENGTH OF CARBON AND ALLOY STEELS. IF ENOUGH DATA ARE ACCUMULATED, IT IS POSSIBLE TO PLOT, FOR EVERY GRADE OF STEEL, NOMOGRAMS FOR THE CALCULATION OF IMPACT STRENGTH FROM HARDNESS AND STRUCTURE OF FRACTURE. IN ENGLISH	24094	201

RESULTS OF A JOINT INVESTIGATION ON REMOVAL OF ROLLING SKIN FROM SHIP STEELS.=	24095	101
SCHIFF UND HAFEN, 10, JAN. 1958, P. 23-25.	24095	201
THIS IS A SHORT BUT COMPREHENSIVE REPORT ON THE TITLE TOPIC. THE MAIN OBJECTION WAS TO ESTABLISH SUITABLE FINISHING PROCEDURES BOTH DURING AND AFTER ROLLING, WHICH WOULD FACILITATE REMOVAL OF THE ROLLING SKIN BEFORE PAINTING. VARIOUS PROCEDURES ARE EVALUATED BOTH FOR RIMMING AND ROLLED STEELS. TRANSLATION OPTIONAL.	24095	202

AUTOMATIC WELDING, JUL 1962, P. 8-11	24124	507
TESTS WERE PERFORMED ON CORROSION RESISTANCE OF WELDED JOINTS BETWEEN ALUMINUM ALLOYS AND STEEL IN SYNTHETIC SEA WATER. IT IS CONCLUDED THAT THE CORROSION RESISTANCE OF JOINTS BETWEEN ALUMINUM ALLOYS AND GALVANIZED STEEL ARE SUFFICIENTLY HIGH. A VARIETY OF SATISFACTORY WELDING TECHNIQUES HAS BEEN DEVELOPED FOR VARIOUS TECHNOLOGICAL NEEDS.	24124	701

7	24137	252

A METHOD IS DESCRIBED WHICH CAN BE USED TO PERFORM NOTCHED BEND IMPACT TESTS ON THESE MATERIALS. IT APPEARS THAT THE TRANSITION TEMPERATURE IS NOT MUCH CHANGED IF A COMPARABLE, MULTILAYER SPECIMEN, JOINED BY RIVETS AT ENDS, IS TESTED INSTEAD OF A SINGLE LAYER. HOWEVER, THE TRANSITION TEMPERATURE FOR A GIVEN THICKNESS OF A LAYER DECREASES RAPIDLY WITH DECREASE IN THICKNESS.	24137	501

DEMIN, I.

DETERMINATION OF ICE DISTRIBUTION BY SHIP RADARS. =

MORSKOJ FLOT, 21, MAR 1961, PP. 12-14

THIS IS BRIEF ANALYSIS OF THE TITLE SUBJECT.

IT IS CONCLUDED THAT RADARS OF TYPES NEPTUN-M AND DON ARE QUITE SUITABLE FOR DETERMINATION OF ICE DISTRIBUTIONS. BEST ACCURACY OF OBSERVATION IS REACHED WHEN ICE FIELDS ARE ROUGHED AND COMPACT. BROKEN ICE AND FIELDS OF FLOWS ARE USUALLY OVERESTIMATED IN SIZE AND DENSITY. TRANSLATION OPTIONAL.

OF A METHOD OF POSITION DETERMINATION OF ICEBREAKERS DURING THE POLAR NIGHT. A REGULAR THEODOLITE IS USED FOR MEASUREMENTS BASED ON OBSERVATION OF STARS AND ON RECORDING OF TIME OF THEIR RELATIVE MOTION. IT IS STATED THAT SUCH A METHOD WAS USED IN WINTER OF 1961 ON THE LENIN ICEBREAKER. MEASUREMENTS WERE PERFORMED BOTH ON THE SHIP AND ON THE SURROUNDING ICE. TRANSLATION OPTIONAL.

SOME STABILITY CONDITIONS OF A NONLINEAR SYSTEM OF AUTOMATIC SHIP NAVIGATION.=

TRUDY C.N.I.I. MORSKOGO FLOTA 55, 1964, P. 33-51

THIS IS AN EXTENSIVE AND DETAILED ARTICLE ON STABILITY PROBLEMS OF NONLINEAR SYSTEMS OF AUTOMATIC SHIP NAVIGATION. THE STABILITY CONDITIONS OF A SYSTEM, WHICH CAN BE REGULATED, WERE DERIVED UNDER THE ASSUMPTION OF A NONLINEAR RUDDER DRIVE. THIS WAS DONE BY THE DIRECT METHOD OF A. M. LJAPUNOV AT CONSTANT EXCITATIONS AND ALSO BY MEANS OF THE METHOD OF STATISTICAL LINEARIZATION WHEN RANDOM EXCITATION FACTORS WERE PRESENT. THE STABILITY CONDITIONS WERE OBTAINED FOR THE SYSTEM UNDER VARIOUS WORKING REGIMES.

LINE ICEBREAKER LENINGRAD. =

MORSKOJ FLOT, 22, OCT 1962, PP. 30-32

THIS IS THE SECOND ICEBREAKER OF THE MOSKVA CLASS, BUILT AT WARTSILA INC. IN FINLAND. THE ARTICLE DESCRIBES IN DETAIL ALL IMPORTANT TECHNICAL DATA EXCEPT FOR MATERIALS WHICH WERE USED. TOTAL DISPLACEMENT OF THE ICEBREAKER IS 13,290 TONS, MACHINERY OUTPUT 26,000 H.P. IT SATISFIES THE SPECIFICATIONS OF CLASS 100 AL OF THE LLOYD REGISTER OF SHIPPING AND PERTAINING SOVIET SPECIFICATIONS. IT IS ASSIGNED TO THE NORTHERN POLAR SEA WAY. TRANSLATION RECOMMENDED.

ICEBREAKER KARHU.=

SCHIFF UND HAFEN, 10, NOV 1958, PP. 2-12

THE ICEBREAKER KARHU IS DESCRIBED IN A BROADER CONNECTION WITH THE DEVELOPMENT OF ICEBREAKER PRODUCTION IN FINLAND. PAST AND PRESENT HISTORY AND DESCRIPTION OF TEN ICEBREAKERS USED IN FINLAND FROM 1890 TILL 1959 IS GIVEN. THE FOUR MOST RECENT MODELS WERE BUILT IN FINLAND IN 1939, 1953, 1958 (KARHU) AND IN 1959 (MURTAJA). THE LAST TWO ARE IDENTICAL. HOWEVER, ALMOST 40 ICEBREAKERS UP TO 22,000 H.P. (THE MOSKVA CLASS) WERE BUILT BY SANDVIKENS SKIPPSDOCKA IN HELSINGFORS, FINLAND FROM 1938 TO 1960. THE KARHU AND MURTAJA ICEBREAKERS ARE DRIVEN BY 2 FORWARD AND 2 AFT PROPELLERS, PROPORTION OF POWER IS APPROXIMATELY 3:1 AND MAY BE REVERSED. TOTAL OUTPUT OF THE FOUR DIESEL-ELECTRIC UNITS IS 7,500 H.P. THE PROPULSION FACILITY IS DESCRIBED IN DETAIL. THE SAME IS TRUE FOR DESCRIPTION OF OTHER MECHANICAL EQUIPMENT, CONTROLS AND FURNISHINGS. GENERAL DATA AND DRAWINGS ARE SHOWN AND DISCUSSED AT LENGTH.

THE HULL STRUCTURE CONSISTS OF TEN COMPARTMENTS AND IS DESCRIBED ONLY SHORTLY. IT SATISFIES

THE CLASS +100 A 1 ICEBREAKER SPECIFICATIONS OF THE LLOYDS REGISTER AND ALSO THE HIGHEST FINNISH ICE CLASS IA. IT IS ALMOST COMPLETELY WELDED, MAXIMUM PLATE THICKNESS 1.2 IN. NO MATERIAL OR WELDING PROCEDURE DATA IS GIVEN.

DANBJORN ICEBREAKER WITH NEW B + W VEE-TYPE ENGINES.=

SHIPPING WORLD AND SHIPBUILDER, 7, OCT 1965, P. 72-76

DESCRIPTION OF THE DANBJORN ICEBREAKER IS GIVEN. TOTAL MACHINERY OUTPUT AMOUNTS TO 10,500 S.H.P., DISPLACEMENT IS 3,685 TONS, SPEED IN OPEN WATER IS 18 KNOTS. MORE DATA IS GIVEN.

ACCORDING TO NORWEGIAN VERITAS, THE ICEBREAKER IS CONSTRUCTED AS A ONE COMPARTMENT SHIP, THE STEEL STRUCTURE IS FULLY WELDED, PLATE THICKNESSES UP TO 1.25 IN. WERE USED. THERE ARE TWO FORWARD AND TWO AFT PROPELLERS POWERED BY A DIESEL-ELECTRIC UNIT. THIS CONSISTS OF SIX V-12 CYLINDER ENGINES WITH 1,370 K.W. GENERATORS. FOUR OF THESE DRIVE THE AFT PROPELLERS AND TWO THE FORWARD ONES. HEELING PUMPS, REMOTE CONTROL OF MACHINERY AND AUTOMATIC RECORDING INSTRUMENTS ARE BRIEFLY MENTIONED.

A NEW HARBOR ICEBREAKER.=

SUDOSTROENIE, 26, JAN 1960, PP. 6-8

A NEW ICEBREAKER DESIGNED FOR BOTH HARBOR AND LINE SERVICE IS DESCRIBED. IT BELONGS TO THE INTERMEDIATE CLASS, HAVING ONE FORWARD AND TWO AFT PROPELLERS AND A DIESEL-ELECTRIC FACILITY OF TOTAL OUTPUT 5400 HP. THE DESCRIPTION IS RATHER DETAILED, AND IT CONTAINS ALSO COMPARATIVE DATA OF TEN OTHER PARTLY RUSSIAN ICEBREAKERS OF SIMILAR SIZE. THE GENERAL ARRANGEMENT OF CONSTRUCTION IS MENTIONED, INCLUDING SOME INFORMATION ON MATERIALS USED. HOWEVER, NO INFORMATION ON ALLOY STEELS WHICH HAVE BEEN USED IS DISCLOSED. THE POWER UNIT AND ITS POSSIBLE SERVICE ARRANGEMENTS ARE DISCUSSED. TRANSLATION RECOMMENDED.

REQUIREMENTS OF CLASSIFICATION REGISTERS ON
STRENGTH OF SHIPS NAVIGATING IN ICE.=

SUDOSTROENIE, 28, JAN 1962, PP. 7-10

THIS IS A VERY USEFUL ARTICLE WHICH COMPARES BASIC STRUCTURAL REQUIREMENTS OF TEN REGISTERS ON CARGO SHIPS NAVIGATING IN ICE. REQUIREMENTS OF THE FOLLOWING REGISTERS ARE INCLUDED SEA

REGISTER OF THE USSR (1956), LLOYD REGISTER OF SHIPPING (1958), BUREAU OF SHIPS (1959), NORWEGIAN VERITAS (1958) AND OF SIMILAR ORGANIZATIONS IN FINLAND (1958), FRANCE (1959), GERMANY (1956), JAPAN (1956), POLAND (1957) AND ITALY (1956). A DETAILED COMPARATIVE TABLE IS INCLUDED AND INDIVIDUAL CLASSES ARE BRIEFLY DISCUSSED. AN EXAMPLE SHOWS A HYPOTHETICAL 10 000 TON SHIP AND EVALUATES ITS STRENGTH CHARACTERISTICS ACCORDING TO DIFFERENT REQUIREMENTS. IT APPEARS THAT THE TOP CLASSES OF THE ENGLISH LLOYD AND OF THE USSR REGISTER ARE SUPERIOR TO THE GERMAN, NORWEGIAN AND JAPANESE CLASSES. TRANSLATION RECOMMENDED.

THIS IS A PART OF THE AUTHOR'S M.C.T.H. 513. IT PRESENTS A SHORT ACCOUNT OF ICEBREAKING THEORY AND OF RESULTING RECOMMENDATIONS ON ICE CLASSIFICATION.

FIRST, IT GIVES MEAN SURFACE TEMPERATURES OF ICE IN VARIOUS POLAR AREAS. THIS MEAN SURFACE TEMPERATURE IS CONSIDERED AS A BASIS FOR COMPARISON OF MECHANICAL PROPERTIES OF ICE. A GRAPH OF VERTICAL FLOW FORCE VS. TEMPERATURE, COMPOSITION AND THICKNESS IS SHOWN. THEN PROPULSION MACHINERY AND THRUST PREDICTIONS ARE DISCUSSED WITH SPECIAL ATTENTION TO ZERO VELOCITY CONDITION. THE REMAINING PART IS DEVOTED TO ICEBREAKING THEORY, NAMELY TO ICEBREAKER MOTION IN ICE AND TO ITS ABILITY TO BREAK ICE.

THIS IS A FIRST DRAFT ARTICLE SUMMARIZING THE WORK WHICH HAS BEEN DONE SINCE 1933. MAINLY IN GERMANY, ON PITCHING EQUIPMENT FOR ICEBREAKERS. SUCH EQUIPMENT CONSISTS USUALLY OF TWO ECCENTRIC WEIGHTS, ROTATING AROUND THE SAME HORIZONTAL AXIS BUT IN OPPOSITE DIRECTIONS. HENCE A VERTICAL OSCILLATING FORCE OF PRESCRIBED MAGNITUDE AND FREQUENCY IS PRODUCED. THIS EQUIPMENT REPLACES HEELING AND TRIMMING TANKS WHICH PRODUCE ONLY STATIC FORCES. THE DYNAMICS OF OSCILLATING FORCE MAINTAINS PARTLY THE NATURAL PITCH AND ROLL MOTION OF THE SHIP DURING ICEBREAKING AND VIRTUALLY DOUBLES THE ICEBREAKING CAPACITY OF A GIVEN SHIP.

ALTHOUGH SUCH EQUIPMENT HAD BEEN USED ONLY ON RELATIVELY SMALL ICEBREAKERS (3000 HP) AND TUGS, IT IS EXPECTED THAT LARGE ICEBREAKERS MAY BENEFIT AS WELL.

THE FORCED DYNAMIC MOTION OF THE SHIP IN ICE PRODUCES SOMEWHAT DIFFERENT REACTIONS FROM THE SURROUNDING ICE. HENCE, SLIGHTLY DIFFERENT BOW SHAPE IS REQUIRED, NAMELY, 15 DEGREE BOWSTEM SLOPE IS FAVORED. SOME EXAMPLE SECTIONS ARE SHOWN.

EFFICIENCY OF MECHANICAL PITCHING PLANTS INSTALLED IN ICEBREAKERS.=

SCHIFFBAUTECHNISCHE GESELLSCHAFT, NOV 1958, PP 2-17

THIS IS A MANUSCRIPT OF A LECTURE BY THE AUTHOR ON PITCHING EQUIPMENT FOR ICEBREAKERS (C.F. 12054). IT DESCRIBES EXTENSIVELY THE FAVORABLE EXPERIENCE WITH PITCHING EQUIPMENT ON ICEBREAKERS WISENT (BUILT IN 1952), LMSHORN (1955/56), EISFUCHS (1957) AND SEIDENSTEIN. ALTHOUGH THOSE ARE ONLY SMALL ICEBREAKERS (300 TONS, 1000 HP), THE EXPERIENCE SHOWS THAT THEY WERE CAPABLE OF PERFORMING LIKE VESSELS OF TWICE THAT SIZE. HENCE, IT IS NECESSARY TO EQUIP SUCH ICEBREAKERS WITH STRONGER HULLS.

THE LECTURE FURTHER DISCUSSES THE THEORETICAL ASPECTS OF SHIP DESIGN WITH RESPECT TO PITCHING EQUIPMENT (VIBRATION ANALYSIS, OPTIMUM FREQUENCY AND AMPLITUDE, ETC.). IT IS EXPECTED THAT EVEN LARGE ICEBREAKERS MAY BE EQUIPPED WITH PITCHING EQUIPMENT.

THEORY OF ICEBREAKING IS BRIEFLY DISCUSSED, AND IT IS SHOWN THAT DYNAMICAL FORCES PRODUCED BY PITCHING EQUIPMENT ARE MORE EFFICIENT IN ICE BREAKING, CAPABLE OF BREAKING THICKER ICE AND OF PRODUCING SMALLER FLOES. RESULTS OF FIELD AND LABORATORY EXPERIMENTS ARE DISCUSSED.

FINALLY, EFFECTS ON CREW ARE DISCUSSED AND CONSIDERED AS NEGLIGIBLE. THE LECTURE SHOULD CONTAIN 15 FIGURES AND THREE MOVIES. NONE OF THESE IS ATTACHED TO THE MANUSCRIPT. IN ENGLISH.

NEW RULES FOR CLASSIFICATION AND CONSTRUCTION OF STEEL SEA SHIPS OF THE SEA REGISTER OF USSR.=

SUDOSTROENIE, 23, JAN 1957, PP. 4-10

THIS IS AN EXPERT CRITICAL EVALUATION OF THE NEW RULES OF 1956 WHICH WERE TO REPLACE THE 1940 ISSUE. IT CONTAINS MANY COMMENTS, SOME OF THEM BEING VERY CRITICAL. OBJECTIONS ARE CONCENTRATED MAINLY ON PROBLEMS OF HULL DESIGN, AND

CONSIDERABLE ATTENTION IS GIVEN TO USE OF STEELS WITH HIGHER MECHANICAL PROPERTIES. HERE THE RATIO OF ULTIMATE STRENGTH TO YIELD STRENGTH IS INTRODUCED IN THE RULES FOR USE IN DESIGN

FORMULAE. NATURALLY IN THE RULES THIS OBSCURE RECOMMENDATION IS SEVERELY CRITICIZED, ALSO BECAUSE IT WOULD DISCOURAGE FROM USE OF BETTER

STEELS. THERE ARE MANY OTHER COMMENTS WHICH INDICATE THAT THE RULES CONTAIN BOTH MODERN AND

NUMERICAL INTEGRATION FORMULAE FOR USE IN CA-
LCULATIONS OF SHIP STRUCTURES ON COMPUTERS.=

SUDOSTROENIE, 25, FEB 1959, PP. 12-14

AFTER A SHORT SUMMARY OF PRESENT FORMULAE FOR
NUMERICAL INTEGRATION, THE ARTICLE NOTES SPECI-
AL REQUIREMENTS FOR INTEGRATION OF CERTAIN FUN-
CTIONS OF THE SHIP SURFACE ALONG THE SHIP LENG-
TH. THOSE REQUIREMENTS INCLUDE A SUFFICIENT
ACCURACY WITHOUT ADDITIONAL ORDINATES, LOCATIO-
N OF ORDINATES ON THEORETICAL FRAME AXES WHEN
20 SECTIONS ARE CONSIDERED. THE NUMBER OF ORD-
INATES SHOULD BE MINIMUM.

A SERIES FORMULA (2) IS GIVEN WITH COEFFICIENT
S WHICH ARE OBTAINED AS SOLUTIONS OF A SYSTEM
OF LINEAR ALGEBRAIC EQUATIONS (3). ALL DETAIL
S ARE GIVEN. AS AN EXAMPLE, AREAS AND CENTERS
OF GRAVITY ARE EVALUATED FOR A SET OF ALGEBRA-
IC CURVES. ALTOGETHER 7 FORMULAE WITH VARIOUS
NUMBER OF ORDINATES ARE COMPARED. THOSE DEVE-
LOPED IN THIS ARTICLE SHOW BEST ACCURACY WITH
THE LOWEST NUMBER OF ORDINATES. TRANSLATION O-

EXPERIENCE OBTAINED FROM APPLICATION OF RUBBER TUG BUMPERS ON ICEBREAKERS.=

SUDOSTROENIE, 28, FEB 1962, PP. 57-59

THIS IS A SHORT BUT REASONABLY DETAILED DESCRIPTION OF THE TITLE TOPIC. IT IS RECOGNIZED THAT DURING TOWING AND ICEBREAKING OPERATIONS, THERE IS A DANGER OF COLLISION OF SHIPS. HENCE, ICEBREAKERS HAVE TO BE EQUIPPED WITH SUITABLE SAFETY EQUIPMENT. RUBBER BUMPERS WHICH ARE USUALLY USED ON TUGS MAY SERVE FOR THAT PURPOSE. SOME ADJUSTMENTS ARE NECESSARY FOR USE ON ICEBREAKERS. THOSE ARE DESCRIBED (INCLUDING DIMENSIONS) AND A GENERAL DRAWING IS SHOWN. IT IS REPORTED THAT SUCH BUMPERS WERE SUCCESSFULLY USED ON ICEBREAKER LENIN. TRANSLATION OPTIONAL.

ICEBREAKER SIBIR IN THE ARCTIC.=

SUDOSTROENIE, 28, APR 1962, P. 81

THIS IS A VERY BRIEF NOTE ON THE TITLE ICEBREAKER. IT WAS COMPLETELY REBUILT IN 1959. CONSIDERABLE PORTION OF STRUCTURAL PARTS (3000 TONS) WAS REPLACED, AND THE ORIGINAL COAL WAS CHANGED TO A LIQUID FUEL. THE ICEBREAKER HAS NOW 12 000 HP. 8326 TONS DISPLACEMENT, SPEED 13.9 KNOTS AND PERIOD OF INDEPENDENT OPERATION HAS BEEN INCREASED FROM 25 TO 52 WEEKS.

THE USE OF COMPUTERS IN SHIP STATICS CALCULATIONS.=

SUDOSTROENIE, 23, MAY 1957, PP. 49-52

THIS IS AN EXPOSITORY ARTICLE CONTAINING SOME EXAMPLES OF GENERAL NATURE. THE EXPLANATIONS AND METHODS USED ARE ELEMENTARY. EXAMPLES INCLUDE VOLUME DETERMINATION FROM CROSS-SECTION SHAPES, CENTERS OF GRAVITY, SHIP STABILITY PROBLEMS, ETC. NO DETAILS OR NUMERICAL RESULTS ARE SHOWN.

STRENGTH COMPARISON OF WELDED AND RIVETED JOINTS UNDER DYNAMIC LOADING.=

SUDOSTROENIE, 23, AUG 1957, PP. 7-11

THIS IS A DESCRIPTION OF EXTENSIVE EXPERIMENTS PERFORMED ON STRUCTURAL JOINTS OF ACTUAL SIZE. COMPARISON OF TYPICAL SHAPES AND ARRANGEMENTS SHOWS THAT RIVETED JOINTS OF EQUAL WEIGHT AS WELDED ONES HAVE ONLY ABOUT 40% OF STRENGTH OF THE LATTER.

THIS ARTICLE IS A PART OF EXTENSIVE WORK OF THE AUTHOR WHO IS WELL KNOWN FOR HIS STUDIES IN STRENGTH OF WELDMENTS.

A CLASS OF ICEBREAKING SHIPS.=

SUDOSTROENIE, 28, NOV 1962, P. 77

THIS IS A SHORT ACCOUNT OF PAPERS WHICH HAVE APPEARED IN HOLLAND SHIPBUILDING, 10, JULY 1961, AND 11, MAR 1962, RESPECTIVELY.

ICEBREAKING CARGO SHIPS RITVA DAN AND ERITA DAN ARE DESCRIBED. DATA: LENGTH 98.5 M, BREADTH 14 M, DEPTH FROM UPPER DECK 8 M, DRAUGHT UNDER LOAD 6.6 M, DEAD WEIGHT 2750 TONS, SPEED 14.5 KNOTS, SKIN THICKNESS AT WATERLINE 25 MM (1 IN.) AT STERN AND 18 MM (0.7 IN.) SIDES. A MAI

ON RATIONAL DISTRIBUTION OF SHIP LOAD FROM T
HE GENERAL STRENGTH VIL POINT. =

SUDOSTROENIE, 23, JAN 1957, PP. 3-51

THIS IS A DESCRIPTION OF A METHOD FOR RATIONAL
DISTRIBUTION OF A GIVEN LOAD IN INDIVIDUAL PA
RTS OF A SHIP. GENERAL STRENGTH IS TAKEN AS A
CRITERION. FIRST, THE METHOD IS EXPLAINED WH
EN SPECIAL DIAGRAMS FOR CONTROL OF SHIP LOAD A
RE AVAILABLE. THE CASE OF EQUIPMENT WEIGHT AN
D THAT OF CARGO WEIGHT ARE CONSIDERED SEPARATE
LY. THEN APPROXIMATE FORMULAE ARE GIVEN WHEN
DIAGRAMS ARE NOT AVAILABLE. ALL ARE VERY SIMP
LE, AS IS THEIR EXPLANATION.

A HARBOR ICE-BREAKING FERRY. =

SUDOSTROENIE, 31, AUG 1965, PP. 3-6

THIS IS A DESCRIPTION OF AN ICE-BREAKING FERRY
FOR PASSENGERS AND VEHICLES TRANSPORTATION IN
HARBORS. ITS NAME IS KAMONEREC AND THE DATA I
S AS FOLLOWS CLASS 0.4 P 4/1 S OF THE USSR R
EGISTER, LENGTH 40M, BREADTH 10M, DEPTH 4.2 M,
DRAUGHT 2.5 M, DISPLACEMENT (WITH LOAD) 516 T
ONS, LOAD CAPACITY 65 TONS (64 PASSENGERS). D
IESEL-ELECTRIC PROPULSION, TWO PROPELLER ENGIN
ES (FORWARD AND AFT) GIVE 312 KW AT 420 RPM.
MANY DETAILS ARE GIVEN AND DRAWINGS ARE INCLUD
ED. TRANSLATION OPTIONAL.

A NEW ICE-BREAKING STEAMER MAGGA DAN. =

MORSKOJ FLOT, 17, JUL 1957, PP. 26-30

A DETAILED DESCRIPTION OF THE STEAMER IS GIVEN
. IT HAS BEEN BUILT IN AND FOR DENMARK. IT M
EETS ICE-BREAKING REQUIREMENTS OF THE ENGLISH L
LOYD AND OF THE FINNISH AL ICE CLASS (I.E. THE
SKIN MUST BE OVER 1 IN. THICK). IT CAN CARRY
36 PASSENGERS AND HENCE MEETS ALL SAFETY REQU
IREMENTS FOR PASSENGER SHIPS. DATA LENGTH 75
M, BREADTH 13.7 M, LOAD CAPACITY 62 500 CUBIC
FEET, SPEED 12 KNOTS. IT HAS SOME INTERESTIN
G FEATURES AND EQUIPMENT. ITS COLOR IS BRIGHT
RED. IT HAS SOPHISTICATED NAVIGATION EQUIPME
NT, TWO INDEPENDENT RADARS, AUTOMATIC SMOKE SI
GNALIZATION SYSTEM. MANY PARTS OF EQUIPMENT A
RE DOUBLED.

SHIP-BUILDING COMPUTATIONS ON COMPUTERS. =

SUDOSTROENIE, 31, FEB 1965, PP. 79-80

THIS IS AN EXTENSIVE AND DETAILED REVIEW OF A
RECENT BOOK BY PEJNOV, M. N., BREGMAN, V. I.,
MOSKALENKO, V. M., NAKHIMOVICH, E. M., PETROV,
E. JU, MOSHENSKIY, N. L. AND AKSENOV, E. M.

THE BOOK APPEARED UNDER THE TITLE NAME AND WAS
EDITED BY PEJNOV, M. N. IN THE PUBLISHING HOU
SE SUDOSTROENIE IN 1964. THE ACCOUNT INDICATE
S THAT THE BOOK IS MODERN, WELL WRITTEN, CONTA
INS MANY EXAMPLES AND DEALS WITH IMPORTANT TOP
ICS. TRANSLATION RECOMMENDED.

ICEBREAKERS OF HIGHER CAPACITY ARE NEEDED FOR FAR EAST AND NORTH.=

MORSKOJ FLOT, 25, FEB 1965, P. 44

THE INTERESTING PART OF THIS ARTICLE IS THAT IT GIVES SOME DATA OF A LEDOKOL (ICEBREAKER) CLASS OF ICEBREAKERS WHICH HAS APPEARED ONLY ON PHOTOGRAPHS IN SUDOSTROENIE JOURNAL. AS OF THE DATE OF THIS ARTICLE, 6 SUCH ICEBREAKERS HAVE BEEN BUILT PROBABLY BY THE ADMIRALTEJSKIY SHIPYARD IN Leningrad. FURTHER SHIPS WILL BE BUILT. PRINCIPAL DATA: LENGTH 67.63M, BREADTH MAX. 18.06 M, DISPLACEMENT 2000 TONS, CAPACITY ON AFT PROPELLERS 4800 HP, SPEED 14.8 KNOTS. DIESEL-ELECTRIC PROPULSION. THE ARTICLE WAS WRITTEN BY A CREW MEMBER (ELECTROTECHNICIAN) WHO SERVED ON LEDOKOL 1 AND LEDOKOL 3. HE STATES THAT THE LEDOKOL CLASS HAS NOT SUFFICIENT CAPACITY FOR EFFECTIVE ICE-BREAKING OPERATIONS ESPECIALLY IN WINTER. HE SAYS THAT TWO CLASSES SHOULD BE CONSTRUCTED, ONE 5400 HP WHICH COULD BE USED IN HARBORS DURING WINTER AND A 7200 HP CLASS FOR REGULAR WINTER USE ON THE NORTHERN SEA WAY. THEN HE CRITICIZES SOME DESIGN FEATURES OF THE LEDOKOL CLASS, PARTICULARLY THE FORWARD PROPELLER. TRANSLATION RECOMMENDED.

1. A SIMPLIFIED METHOD FOR COMPUTATION OF WIND
 VELOCITY WHICH A SHIP CAN RESIST.=
 SUPOSTROENIE, 24, FEB 1961, PP. 1-5
 THIS IS A DETAILED EXPLANATION OF A SIMPLIFIED
 APPROACH TO COMPUTATION OF A MAXIMUM ANGLE OF
 INCLINATION AND OF THE LIMITING VALUE OF THE
 WIND FORCE. THE METHOD IS BASED ON CONPARISON
 OF A DIAGRAM OF THE INCLINATION MOMENT WITH
 A DIAGRAM OF MOMENTS OF STATIC STABILITY. GRAPHS,
 FORMULAS, AND AN ILLUSTRATIVE EXAMPLES ARE
 GIVEN.

2. RATIONAL ARRANGEMENT OF A RUDDER IN A STREAM
 OF A HEAVILY LOADED PROPELLER.=
 SUPOSTROENIE, 27, JUL 1961, PP. 13-15
 THIS IS A SHORT BUT DETAILED THEORETICAL STUDY
 ON THE TITLE TOPIC. IT IS CONCLUDED THAT THE
 RUDDER SHOULD BE LOCATED AS CLOSELY AS POSSIBLE
 TO THE PROPELLER. A METHOD FOR EVALUATION
 OF THE LIFTING FORCE OF A RUDDER IS OUTLINED IN
 DETAIL.

3. EXPERIMENTAL INVESTIGATION OF WATER RESISTANCE
 DURING ROLL OF A SHIP.=
 SUPOSTROENIE, 23, JUN 1957, PP. 9-11
 THIS IS BOTH AN EXPERIMENTAL AND THEORETICAL INVESTIGATION
 ON THE TITLE SUBJECT. THE LAW OF
 WATER RESISTANCE AS FUNCTION OF ANGULAR VELOCITY
 OF ROLL IS EXPRESSED IN FORM OF A QUADRATIC
 BINOMIAL. A PROCEDURE IS OUTLINED WHICH EN-
 ABLES TO COMPUTE THE TOTAL RESISTANCE MOMENT OF
 A STANDING SHIP DURING THE ROLLING MOTION IN
 CALM WATER. THE METHOD SHOWS REASONABLE AGREE-
 MENT WITH EXPERIMENTS AND IS APPLICABLE TO A VARIETY
 OF CROSS-SECTIONS.

WELDABILITY INVESTIGATION OF THERMALLY-STRENGTHENED CARBON STEEL 20 C.=	24005	201
SUDOSTROENIE, 29, JAN 1963, PP. 51-54	24005	202
THIS ARTICLE DESCRIBES TESTS WHICH ARE TO CHARACTERIZE WELDABILITY OF THE MENTIONED STEEL.	24005	251
THE THERMALLY-STRENGTHENED CARBON STEEL 20 C IS CONSIDERED AS A SUBSTITUTE FOR MORE EXPENSIVE LOW-ALLOY STEELS WITH YIELD LIMIT LARGER THAN 35 KG/MM ² (I.E. 50KSI). THE STEEL ITSELF IS NOT DESCRIBED.	24005	501
BOTH AUTOMATIC AND MANUAL WELDING WAS USED ON PLATES 10 AND 32 MM (I.E. 0.4 AND 1.25 IN.). ONLY EMPIRICAL TESTING METHODS ARE USED BENDING TESTS OF SPECIMENS WITH WELDS AND SURFACE WELD-BEADS, IMPACT ROUND NOTCH TESTS, DROP-WEIGHT TESTS ON 4 WELDED BEAMS. IN ADDITION, LIMITED METALLOGRAPHIC STUDIES OF THE WELD WERE MADE. THE RESULTS SHOW THAT THE TESTED WELDMENTS ARE SAFE AGAINST BRITTLE FRACTURE AT -25 DEGREES C AND THAT THE ORIGINAL STRENGTHENING WAS NOT IMPAIRED BY SUBSEQUENT WELDING.	24005	502
HOWEVER, SUCH CONCLUSIONS ARE NOT FULLY JUSTIFIED SINCE THE METHODS USED ARE OBSOLETE AND UNRELIABLE.	24005	503

A MODEL OF THE NUCLEAR ICEBREAKER LENIN.=
SUDOSTROENIE, 24, APR 1958, P. 72
THIS IS A NOTE ON A 1 TO 50 SCALED MODEL OF THE
NUCLEAR ICEBREAKER WHICH WAS DISPLAYED AT THE
WORLD FAIR IN BRUSSELS IN 1958. OBVIOUSLY,
IT WAS A VERY SOPHISTICATED AND LARGE MODEL, 9
FT. LONG AND CONSISTING OF 15,000 JOINTS AND
OF 50,000 PARTS. 30 PEOPLE, INCLUDING SOME NOTED
ARTISTS, TOOK PART IN CONSTRUCTION. TWO
PHOTOGRAPHS ARE SHOWN.

USE OF STATISTICAL METHODS FOR SHIP STRENGTH
EVALUATION BASED ON EXPERIMENTAL RESULTS. =

TRUDY C.N.I.I. MORSKOBO FLOTA 41, 1962, P. 3-2
2

THIS IS A DESCRIPTION OF EXPERIMENTS WHICH WERE PERFORMED ON THE TANKER INZHENER A. POSTUSHKIN DURING NAVIGATION ON HEAVY SEAS. THE SHIP IS CONSIDERED AS A STATIONARY DYNAMIC SYSTEM WHICH IS SUBJECTED TO A RANDOM INFLUENCE OF THE WAVE PROFILE AT A POINT OF SEA SURFACE. THIS INPUT (EXCITATION) PROCESS IS CONSIDERED STATIONARY AND ERGODIC. THE OUTPUT (RESPONSE) IS ALSO STATIONARY AND ERGODIC AND REPRESENTS THE TIME CHANGE OF THE BENDING MOMENT IN A CROSS-SECTION OF THE SHIP. ALL DETAILS OF THE EXPERIMENTAL PROGRAM, PROCESSING OF RESULTS AND THEIR ANALYSIS AND OTHER FEATURES OF THE PROJECT ARE DESCRIBED. TRANSLATION OPTIONAL.

ICE RESISTANCE OF ICEBREAKER MODELS IN BROKEN
 ICE, AS INVESTIGATED FROM 1949 TO 1951.=
 TRUDY Leningrad. KORABLISTR. INST. 29, 1959, P.
 . 53-69

THIS IS A DESCRIPTION OF EXPERIMENTS WHICH WERE
 PERFORMED IN THE Leningrad SHIPBUILDING INSTI-
 TUTE WITH A SET OF SCALED MODELS OF THE ICEBR-
 EAKER I. STALIN. PARAFFIN ICE WAS USED WITH O-
 FERTY RANGING FROM 4 TO 10. THE RESULTS ARE
 EVALUATED IN FORM OF COEFFICIENTS OF SPECIFIC
 RESISTANCE WHICH ARE FUNCTIONS OF THE FROUDE N-
 UMBER. FORMULAE ARE SHOWN AND COMPARED WITH E-
 XPERIMENTS. C.F. REF. 55067. TRANSLATION REC-
 OMENDED.

RESEARCH IN THE FIELD OF ICEBREAKERS.=

PROBLEMY ARKTIKI I ANTARKTIKI 4, 1960, P. 130-
 138

THIS IS A RATHER GENERAL ARTICLE SUMMARIZING B-
 RIEFLY THE HISTORY OF PAST AND RECENT RESEARCH
 ACTIVITIES IN THE FIELD OF ICEBREAKERS WHICH
 WAS PERFORMED BY THE ARCTIC INSTITUTE. NO REF-
 ERENCES ARE GIVEN. THE FOLLOWING TOPICS ARE D-
 ISCUSSED. ICE RESISTANCE OF BROKEN AND SOLID
 ICE, PROPELLERS AND SHAFTS, HULL STRENGTH, MEC-
 HANICAL SYSTEMS, SPECIFICATIONS AND RECOMMENDA-
 TIONS. TRANSLATION RECOMMENDED.

●	SCHIFF UND HAFEN, NOV 1957, P. 942-950	55114	251
	THIS IS A DETAILED ARTICLE ON A 1700 HP ICEBREAKING TUG WHICH WAS CONSIDERED A PROTOTYPE FOR ABOUT 15 SIMILAR SHIPS TO BE BUILT IN FINLAND. LENGTH 61 M, BREADTH 11.5 M, DEPTH 5.5 M, DRAUGHT 4.5 M, 1013 BRT, 239 NRT. IT SATISFIES THE I A ICE CLASS (FINLAND). IT HAS A FULLY WELDED HULL STRUCTURE. ALL STRUCTURAL, DESIGN AND EQUIPMENT ASPECTS ARE FULLY DESCRIBED.	55114	501

METHOD OF INVESTIGATION OF THE DYNAMICS OF THE SYSTEM: REMOTE AUTOMATIC CONTROL -- MAIN ENGINES -- PROPELLERS -- SHIP'S HULL.=	55127	201
TRUDY G.N.I.I. MORSKOGO FLOTA, 75, 1966, P. 88-98	55127	202
THIS IS A DETAILED THEORETICAL ARTICLE. THE DYNAMIC PROPERTIES OF THE MAIN ENGINE ARE INVESTIGATED FIRST. IT IS NOTED THAT THE USUAL APPROACH TO THIS PROBLEM, WITHIN THE FRAMEWORK OF A REGULATION SYSTEM IS NOT SUITABLE HERE. INSTEAD, THE MAIN ENGINE IS CONSIDERED TO BE A PART OF A CONTROLLED SYSTEM AND, THE EQUATION OF MOTION OF THE ENGINE ACCOUNTS FOR ALL TRANSIENT WORKING MODES. THEN, THE ARTICLE OUTLINES A METHOD OF INVESTIGATION OF DYNAMICS OF THE REMOTE AUTOMATIC CONTROL UNIT AS A PART OF THE SHIP SYSTEM WHICH INCLUDES ALSO THE MAIN ENGINES, THE SCREW PROPELLERS AND THE HULL. TRANSLATION OPTIONAL.	55127	203

PROBLEMY ARKT. I ANTARKT. 24, 1966, P. 68-72	55127	508
THIS IS A DETAILED THEORETICAL STUDY ON THE FORCES WHICH ACT ON THE ICEBREAKER IN A NARROW CHANNEL IN ICE. THE WEDGING CONDITIONS ARE ANALYZED AND THE WEDGING FORCES ARE RELATED TO THE MAGNITUDE OF EMERGENCE OF THE ICEBREAKER HULL AFTER IMPACT, WHICH IS FOUND AS A FUNCTION OF SHIP VELOCITY BEFORE IMPACT, AND OF ICE THICKNESS. HENCE, THE WEDGING FORCES CAN BE RELATED TO SHIP VELOCITY AND TO PARTICULAR ICE CONDITIONS. A SHORT EXAMPLE IS WORKED OUT. TRANSLATION RECOMMENDED.	55127	509

CONSTRUCTION OF THE NUCLEAR ICEBREAKER.=
SUDDOSTROENIE, 23, JAN 1957, PP. 11-14
THIS IS A PRELIMINARY ARTICLE DESCRIBING MAIN
CONSIDERATIONS AND STRUCTURAL FEATURES OF THE
LENIN ICEBREAKER.
THE ADVANTAGE OF THE NUCLEAR PROPULSION LIES B
OTH IN THE LENGTH OF INDEPENDENT NAVIGATION AN
D IN MAINTAINING THE RATIO OF POWER CAPACITY T
O WATER DISPLACEMENT. THIS RATIO (44 000 HP.
TO 16 000 TONS = 2.8) IS PROPORTIONAL TO THE
ICEBREAKING CAPACITY AND WAS LOWER THAN ONE ON
OLD STEAM ICEBREAKERS. COMPARATIVE NAVIGATIO
N PERIOD OF A DIESEL-ELECTRIC ICEBREAKER OF TH
E SAME SIZE WOULD BE ONLY 16 WEEKS AND THE POW
ER CAPACITY WOULD BE ONLY 30 000 HP. HENCE, T
HE ABOVE MENTIONED RATIO WOULD BE 1.9.
SOME STRUCTURAL DETAILS, GENERAL ASSEMBLY AND
WELDING PROCEDURES ARE MENTIONED. TRANSLATION
RECOMMENDED.

FROM THE EXPERIENCE OF EXPLOITATION OF THE I
SPEAKER 'MORRYUA NIKITIC' . =

MOSEKOV FLOT, 24, FEB 1964, PP. 24-25

THE AUTHOR IS CAPTAIN OF THE TITAN ICEBREAKER WHICH HAS BEEN IN SERVICE SINCE 1960. THIS ICEBREAKER HAS BEEN USED SUCCESSFULLY IN REGULAR SEA SERVICE, ALTHOUGH IT HAS BEEN CONSTRUCTED FOR HAR-OF SERVICE. THE ARTICLE CONTAINS SOME TECHNICAL DATA WHICH APPEARS IN MORE DETAIL IN 55014, 75015, 13182 AND ALSO DESCRIBES OPERATION EXPERIENCE. IT SEEMS THAT A MORE REALISTIC ACCOUNT OF THE LATTER IS GIVEN IN 55050.

TRANSLATION OPTIONAL.

FROM THE EXPERIENCE OF CONSTRUCTION OF ICEBREAKING TUGS.=

SUDOSTROENIE, 24, AUG 1958, PP. 54-60

THIS IS A VERY DETAILED AND EXTENSIVE ARTICLE WHICH DESCRIBES CONSTRUCTION, FIELD TESTS AND PERFORMANCE CHARACTERISTICS AND SUBSEQUENT CHANGES OF PROPELLER DESIGN IN POWER PLANT CHARACTERISTICS, ETC., OF TWO IDENTICAL ICEBREAKING TUGS DON AND VOLGA. TECHNICAL DATA: LENGTH 44.7 M, BREADTH 11.4 M, DEPTH 4.0 M, DISPLACEMENT (WITH FUEL FOR 8 WEEKS) 657 TONS, DRAUGHT 2.4 M, 2 DIESEL-ELECTRIC UNITS GIVE 1300 HP. ICEBREAKING CAPACITY IN CONTINUOUS MOTION 0.4 M

FOR AN ACTIVE METHOD OF ICE-BREAKERS OPERATIO

N (EXPERIENCE FROM THE ICEBREAKER MOSKVA). =
 MORSKOJ FLOT, 22, JAN 1965, PP. 35-36
 THIS IS A BRIEF ACCOUNT OF THE AUTHORS EXPERIENCE ON VARIOUS ICEBREAKERS, MOST RECENTLY AS CAPTAIN OF THE ICEBREAKER MOSKVA. IT DESCRIBES ICEBREAKING PERFORMANCE OF ICEBREAKERS OF THE 7000-8000 HP CLASS AND REQUIREMENTS ON THE FOLLOWING SHIPS. THEN THERE IS A VERY BRIEF NOTE ON THE PERFORMANCE OF THE MOSKVA ICEBREAKER AND ON THE GREAT USEFULNESS OF ICE-STRENGTHENED CARGO SHIPS OF LENA CLASS. TRANSLATION AVAILABLE DDC, D PHYS. R(G), REPT. MISC., G. 12, OTTAWA, JAN 1963.

 STATISTICAL EVALUATION OF TECHNICAL FAILURES DURING 1960. =
 SCHIFFRAUTECHNIK II, OCT 1961, P. 525-526
 THIS IS A RATHER INTERESTING SUMMARY OF SHIP FAILURES. IT APPEARS THAT 55% ARE DAMAGES OF VARIOUS MACHINES, AND ABOUT 20% DAMAGES OF PROPULSION SYSTEMS.
 SIX MODES OF BASIC FAILURE REASONS ARE SUBDIVIDED INTO A TOTAL OF 35 ITEMS AND EVALUATED IN PER CENTS.

CAPACITY CALCULATION OF SHIP POWER PLANTS BY
THE METHOD OF STATISTICAL MODELING ON DIGITAL
COMPUTERS.=

SUDOSTROIE, S.F., 1966, PP. 17-41

IT IS PROPOSED TO DETERMINE THE CAPACITY REQUI-
REMENTS OF A SHIP POWER PLANT FROM PROBABILITY
CHARACTERISTICS WHICH ARE OBTAINED BY MEANS OF
STATISTICAL MODELING ON COMPUTERS AND WHICH
ARE BASED ON WORKING FEATURES OF PARTICULAR AP-
PLIANCES AND OF ITS GROUPS. IN THIS WAY, THE
RANDOM CHARACTER OF THE REQUIRED CAPACITY, IS
DESCRIBED BY MATHEMATICAL PROBABILITY, MEAN SQ
VARIANCE DERIVATION AND BY A DISTRIBUTION LAW. THE
LATTER IS WELL APPROXIMATED BY NORMAL DISTRI-
BUTION LAW WHEN THE KOLMOGOROV CRITERION IS US-
ED. THE STATISTICAL MODELING METHOD AND ITS P-
ROGRAMMING IS DESCRIBED IN DETAIL.

ZAICEV, I. A.

ON THE PROBLEM OF SELECTION OF POWER PLANT TYPE
 FOR SHIPS NAVIGATING IN ICE. =

SUDOSTROENIE, 25, OCT 1959, PP. 23-26

THIS IS A DESCRIPTION OF VARIOUS HYDRAULIC SYS-
 TEMS WHICH CAN TRANSFORM EFFECTIVELY THE TORSI-
 ON MOMENT OF A DIESEL ENGINE TO A PROPELLER SH-
 AFT. IT IS SHOWN THAT SUCH REPLACEMENT OF ELE-
 CTRIC TRANSFORMING UNITS IS VERY ADVANTAGEOUS
 ON ICEBREAKERS AND OTHER SHIPS WHICH NAVIGATE
 IN ICE SINCE THE HYDRAULIC TRANSFORMATION IS A
 MORE SUITABLE FOR OPERATING CONDITIONS DURING N-
 AVIGATION IN ICE. TRANSLATION OPTIONAL.

ON ECONOMIC JUSTICES OF OURS WITH NUCLEAR
ON THE PLANTS. =

THIS IS A REVIEW OF OIL TRANSPORTATION COSTS. AMERICAN ARTICLES ON THE TOPIC, FOR EXAMPLE, IN REFERENCES, SEE SHIPPING WORLD, N.Y., 1961 AND COMPASS, LONDON, 1961. IN THE 1960S, CALCULATIONS, THERE IS A RATHER INTERESTING ONE. IN A HYPOTHETICAL EXAMPLE OF OIL TRANSPORT BY A 60,000 TON TANKER FROM THE GULF OF PERSIA TO NEW YORK, THE COST OF TRANSPORTATION IS 9.07 IN CASE OF AN AMERICAN SHIP AND 8.33 IN CASE OF AN AVERAGE SHIP OF ANOTHER WESTERN FLEET. THE DIFFERENCE IS DUE MAINLY TO TONNAGE, INSURANCE AND AMORTIZATION. IT IS SHOWN THAT SHIPS UNDER AR PROPELLSION WOULD BE MORE EXPENSIVE, FROM 9.07 TO 14.90 PER TON.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the team.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete each task.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress to ensure that the project is on track.

5. The final step is to evaluate the results of the project. This involves assessing the outcomes against the objectives and goals and identifying any areas for improvement.

1. The first step is to identify the problem.
 2. The second step is to define the problem.
 3. The third step is to analyze the problem.
 4. The fourth step is to develop a solution.
 5. The fifth step is to implement the solution.
 6. The sixth step is to evaluate the solution.
 7. The seventh step is to monitor the solution.
 8. The eighth step is to maintain the solution.
 9. The ninth step is to improve the solution.
 10. The tenth step is to document the solution.

WORK OF THE PROPELLER PUMP PLANT OF THE A.C.S.
PLANT DURING BREAKING OF ICE BY PROPELLER SELF
DES. =

MORSEKOU FLOT, 26, AUG 1966, PP. 10-24
 THIS IS A DETAILED THEORETICAL AND ONE OF THE
 TITLE SUBJECT. THE THEORY IS BASED ON FOUR
 EXPERIMENTAL FIELD MEASUREMENTS PERFORMED ON
 ICE-BREAKERS. A SIMPLIFIED IS USED TO DETERMINE
 THE FORCES GENERATED DURING INTERACTION OF THE
 FLAOT WITH A FLOT. CALCULATIONS THEN FOLLOW
 AND STATE THE RESULTS OF THE INTERACTION.
 ALSO, THE POWER AND TIME REQUIRED TO
 PROVIDE SUFFICIENT FLOT TO
 OF PERCEIVED OUTPUT WITH THE
 FLOTTING OF FLOTTING IN ICE.

[illegible]

MATHEMATICAL MODELING OF THE INTERACTION OF A PROPELLER WITH ICE.=

SUDOSTROENIE, 30, MAR 1964, PP. 32-36

THIS IS A DETAILED AND ADVANCED STUDY ON MODEL
ING AND COMPUTER ANALYSIS OF AN ICEBREAKERS PO
WER PLANT PERFORMANCE HISTORY DURING INTERACTI
ON OF THE PROPELLER WITH ICE. IT IS CONCLUDED

THAT FAST ACTING EXCITATION EQUIPMENT SHOULD
BE USED FOR ICEBREAKERS POWER PLANTS, WHICH WO
ULD OPERATE ONLY DURING THE INTERACTION PERIOD

. SUCH EQUIPMENT MINIMIZES CHANCES OF WEDGING
OF BLADES IN ICE AND GENERALLY REDUCES THE PR
OBABILITY OF DAMAGE. THE INFLUENCE OF VARIOUS
PARAMETERS OF THE POWER PLANT ON THE WEDGING
REGIME IS ANALYZED AND FULLY EXPLAINED. A PRO
GRAMMING PROCEDURE IS DESCRIBED, WHICH MAY BE
USED TO CALCULATE OPTIMAL PARAMETERS OF A POWE
R PLANT FROM A GIVEN TIME DISTRIBUTION OF THE
ICE MOMENT. SUCH PROCEDURE SHOULD ENSURE BEST
PERFORMANCE OF THE POWER PLANT AND ITS SMOOTH
RESPONSE TO TRANSIENT EFFECTS. TRANSLATION R
ECOMMENDED.

POZDEEV, A.V.

CONSTRUCTION OF NUCLEAR POWER PLANTS FOR MIL
ITARY AND COMMERCIAL VESSELS IN CAPITALIST COU
NTRIES.=

SUDOSTROENIE, 24, JAN 1958, PP. 53-66

THIS IS AN EXTENSIVE REVIEW BASED ON WESTERN (UN
LISTED) REFERENCES. IT SUMMARIZES WORK ON T
HE TITLE SUBJECT WHICH HAD BEEN DONE OR CONSID
ERED AT THAT TIME IN THE USA (ABOVE ALL), ENGL
AND, NORWAY, HOLLAND, FRANCE, SWITZERLAND, AND
IN WESTERN GERMANY.

SOME RESULTS OF TESTING OF MAIN ENGINES OF I
CEBREAKER MOSKVA.=

SUDOSTROENIE, 28, JUN 1962, PP. 45-46

THIS IS A SHORT DESCRIPTION OF PERFORMANCE TES
T RESULTS OF THE MOSKVA ICEBREAKER. A VARIETY
OF DATA IS GIVEN. PLOTS OF OUTPUT CHANGES AN
D FUEL CONSUMPTION OF MAIN ENGINES VS. SPEED O
F THE ICEBREAKER ARE SHOWN. TRANSLATION RECOM
MENDED.

ELECTRIC DRIVE FOR THE SCREW OF THE ATOMIC ICEBREAKER LENIN.

ELEKTRICHESTVO 10, 1959, P. 50-56

THIS IS A DETAILED DESCRIPTION OF THE ELECTRIC POWER SYSTEM FOR THE ICEBREAKER PROPELLERS. IT INCLUDES MAIN TECHNICAL DATA ON THE ICEBREAKER, ITS MAIN CURRENT CIRCUIT DIAGRAM AND DETAILED ACCOUNT OF THE CONTROL SCHEME, INCLUDING ITS STABILIZATION, EXCITATION AND OTHER UNITS.

SCHEMATIC DRAWINGS AND GRAPHS ARE ATTACHED.

1. The first part of the report is devoted to a general description of the object of the investigation and the methods used. The second part contains the results of the calculations and the third part contains the conclusions.

2. The object of the investigation is to determine the influence of the parameters of the system on the results of the calculations. The methods used are the method of finite differences and the method of Monte Carlo.

3. The results of the calculations show that the influence of the parameters of the system on the results of the calculations is significant. The conclusions are that the parameters of the system must be chosen carefully in order to obtain reliable results.

4. The first part of the report is devoted to a general description of the object of the investigation and the methods used. The second part contains the results of the calculations and the third part contains the conclusions.

$\frac{1}{\sqrt{\pi}} \int_{-\infty}^{\infty} f(x) \delta(x-a) dx = f(a)$

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971). The concentration of chlorophylls was expressed as $\mu\text{g mL}^{-1}$ of the sample.

| SCHIFF UND HAFEN, DEC 1957, P. 1035-1097 | 75068 | 251 |
| THIS IS THE SECOND PART OF THE ARTICLE. FOR THE FIRST PART SEE 75067. HERE, THE INFLUENCE OF THE PROPELLER ON SHIPS' CONTROL AND MANEUVER IS DISCUSSED. EXTENSIVE ATTENTION IS ALSO GIVEN TO THE USE OF ADJUSTMENT AS A PART OF THE REGULATION SYSTEM OF THE ENTIRE PROPULSION SYSTEM. FINALLY, POSSIBILITIES OF MANEUVER FOR SHIPS WITH ONE OR MORE ADJUSTABLE PROPELLERS IS DISCUSSED. BRIEF ATTENTION IS GIVEN TO PERFORMANCE IN ICE, WHICH IS FAVORABLE. 65, MAINLY GERMAN REFERENCES ARE GIVEN. | 75068 | 501 |

11. SUMMARY

Library search for literature in the field of icebreaker design and construction was made. The purpose of this search was to collect, review and make documentation of Russian and German literature, published between 1956 and 1966, which was pertinent to the main subject.

Special reference was given to structural design, propulsion and to materials and processes used in construction as well as to physical properties of ice, to icebreaking theory and methods and to problems related to the interaction between the icebreaker and ice. Other pertinent areas, including fracture, fatigue and corrosion resistance were also included.

This report describes the main features of the work, its extent, sources and results. It contains technical information on the documentation and on copyright clearance. Bibliographical data, abstracts and key words of all references included in this search are listed in numerical order within each of ten subject categories.
