FOREWORD

This bibliography represents a selection of recent literature on the Universal Decimal Classification. The emphasis has been given to material published since 1960. More selectivity was applied to earlier literature, and only the more significant items, generally of substantial importance, were chosen from publications earlier than 1950. The objective was to assemble a list in English and other languages that would present a well-balanced record of the nature of the UDC as a major ordering system among the established classification systems. Its prominent role in library cataloging and information handling suggests the need for a reference aid which can serve as a guide to the literature about the UDC. Publications of the UDC (full or abridged) individual schedules and amendments have not been included.

Much of the literature was identified by searching secondary sources dealing with the publications of library and information sciences. Contributions of additional references have been generously supplied by a number of individuals who reviewed the earlier drafts. These include the USNCFID, former UDC Subcommittee members, members of the U.S. Study Group of FID C54/66 and the FID/CC Secretariat, as well as specialists in the U.S. and Europe.

Publications of the International Federation for Documentation can be purchased from the F.I.D., 7 Hofweg, The Hague, Netherlands. A catalog is issued annually and may be procured from F.I.D.
