### EUSTIS DIRECTORATE POSITION STATEMENT

The report is presented in two volumes. This volume (Volume I) gives a complete description of the investigation procedures and contains conclusions and recommendations, with their rationale. Volume II, "Supplemental Design Guide", contains only those recommendations which, if implemented, would improve the reliability and maintainability of future-generation Army helicopters.

This report and the accompanying Volume II are considered to provide an insight into the deficiencies which exist in the requirements documentation for helicopter electrical systems, and use of the recommended changes contained herein and in Volume II is encouraged.

However, it must be emphasized that carte blanche use of any requirement can never be as accurate as a very thorough analysis of requirements as they pertain to specific applications.

The Project Engineer for this effort was Mr. Richard I. Adams, Military Operations Technology Division.

#### DISCLAIMERS

The findings in this report are not to be construed as an official Department of the Army position unless so designated by other authorized documents.

When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission, to manufacture, use, or sell any patented invention that may in any way be related thereto.

Trade names cited in this report do not constitute an official endorsement or approval of the use of such commercial hardware or software.

#### DISPOSITION INSTRUCTIONS

Destroy this report when no longer needed. Do not return it to the originator.

**Block 20**

The helicopters selected are the AH-1G Cobra, UH-1D/H Iroquois, OH-6A Cayuse, CH-47A Chinook, and the CH-54A Tarhe. Schematics of each model helicopter electrical system were analyzed, and a composite schematic was constructed to represent all circuits, equipments, and component parts of all models. This composite schematic provided a baseline system on which to build an electrical system documentation tree.

Documents were collected from DOD sources, supplemented by information from manufacturers' drawings and Army maintenance manuals. They were analyzed for application to the documentation tree and whether they required major revision, minor revision, deletion, or rewrite. Areas which lacked design documentation were identified for new documentation requirements.

Recommendations for new documents and for improvements are identified, and supplementary information to deficient documents is provided in Volume II of this report.

## SUMMARY

This investigation was performed to identify deficiencies in U.S. Army helicopter electrical system documentation. The scope of the effort was constrained to documentation pertinent to three classes of requirements which have impact on the reliability and maintainability of helicopters: (1) design requirements; (2) qualification test requirements, procedures, and practices; and (3) quality assurance provisions and requirements.

The results of this investigation are contained in two volumes: Volume I - Document Deficiency Analysis, and Volume II - Supplemental Design Guide. Figure 1 presents an overview of the total effort and illustrates the allocation of the various tasks into Volumes I and II.

The first major task was to analyze the electrical systems contained in the current inventory of U.S. Army helicopters. Five models were selected as representative of the total family of helicopters: AH-1G, UH-1D/H, OH-6A, CH-47A, and CH-54A. The equipments that comprise the electrical system of these helicopters were then aggregated into six functional categories: alternating current, battery, electrical controls, external power, direct current, and load circuit.

Within each of the six functional groups, component trees were developed to establish the dominant/subordinate relationships among them. This was followed by the development of a baseline electrical system which presents a composite of the design philosophies of all the Army helicopter designers. The development of this baseline system, in turn, is the basis for the design of the structure of the documentation tree included in Volume II of this report.

The next major task was to collect and classify over 200 documents, of which 124 were found to be pertinent; applicable documents were then evaluated against a structured set of deficiency criteria, and the potential degree of impact on reliability and maintainability was assessed. Those documents containing deficiencies with a potential major impact were then reevaluated to identify the alternative actions that the Army might take to reduce the impact and then to select the best of the alternatives.

Of the total of 124 pertinent documents, approximately 96 percent were found to be deficient in the area of reliability requirements, 90 percent in maintainability requirements, and 94 percent in reliability and maintainability demonstration requirements.

To correct the identified deficiencies, 5 new documents should be developed to fill the void in existing documentation. Additionally, 4 of the existing documents should be deleted. Of the remaining documents, 5 were judged adequate, 76 will require major revisions, and 27 should require only minor revisions. Sixteen documents are simple hardware category and were not subjected to an alternative evaluation and selection analysis.

## INTRODUCTION

This investigation was performed in order to:

1. Determine the inherent electrical system documentation deficiencies that impact helicopter reliability and maintainability.
2. Improve deficient documents to reflect the U.S. Army helicopter operational environments.

Volume I of this report describes the various analytical activities that were performed with the primary intent of identifying the basic reliability and maintainability related deficiencies. These activities included:

1. Analysis of current-inventory helicopter electrical systems
2. Establishment of a baseline electrical system
3. Collection of electrical system documentation
4. Determination if applicable documentation existed for each electrical system generic classification
5. Identification of other document sources, i.e., commercial and manufacturer, where no existing military documentation was available
6. Performance of document deficiency analysis on all identified documentation
7. Selection of best alternatives to deficient documents
8. Recommendations for new documents

Volume II of this report is a supplemental design guide (SDG). If promulgated, the SDG will assist the designer of electrical systems and components in improving the reliability, availability, and maintainability of Army helicopters. The SDG contains a helicopter electrical system documentation tree which displays the interstitial relationships of these documents in the design of an electrical system.

## DERIVATION OF BASELINE ELECTRICAL SYSTEM

One objective of this investigation has been to develop a supplemental design guide (SDG). When implemented, this guide will serve to augment existing electrical system documentation in order to ensure that the reliability and maintainability of future electrical systems will not be degraded due to documentation deficiencies. It should be noted that in this context, documentation deficiency means either inadequate or nonexistent documents.

In order to provide an SDG of maximum use to the Army, the particular design philosophies of each of the existing helicopter suppliers must be considered. The baseline electrical system has been derived to satisfy this requirement. This baseline system is a composite design of all existing Army helicopter suppliers and therefore includes all of the generic types of components and functions represented by them.

The existing helicopter electrical systems used to develop the baseline system are shown in Table I.

TABLE I. REPRESENTATIVE ARMY HELICOPTERS

Popular Designation	Name	Manufacturer	Typical Mission Usage
AH-1G	Cobra	Bell Helicopter Company	Attack
UH-1D/H	Iroquois	Bell Helicopter Company	Utility
OH-6A	Gayuse	Hughes Tool Company	Observation
CH-47A	Chinook	Vertol Division — The Boeing Company	Cargo/Transport
CH-54A	Tarhe	Sikorsky Aircraft Division — United Aircraft Corp.	Cargo/Transport

The next step in the baseline system was to aggregate the electrical system into functional categories. The categories selected were:

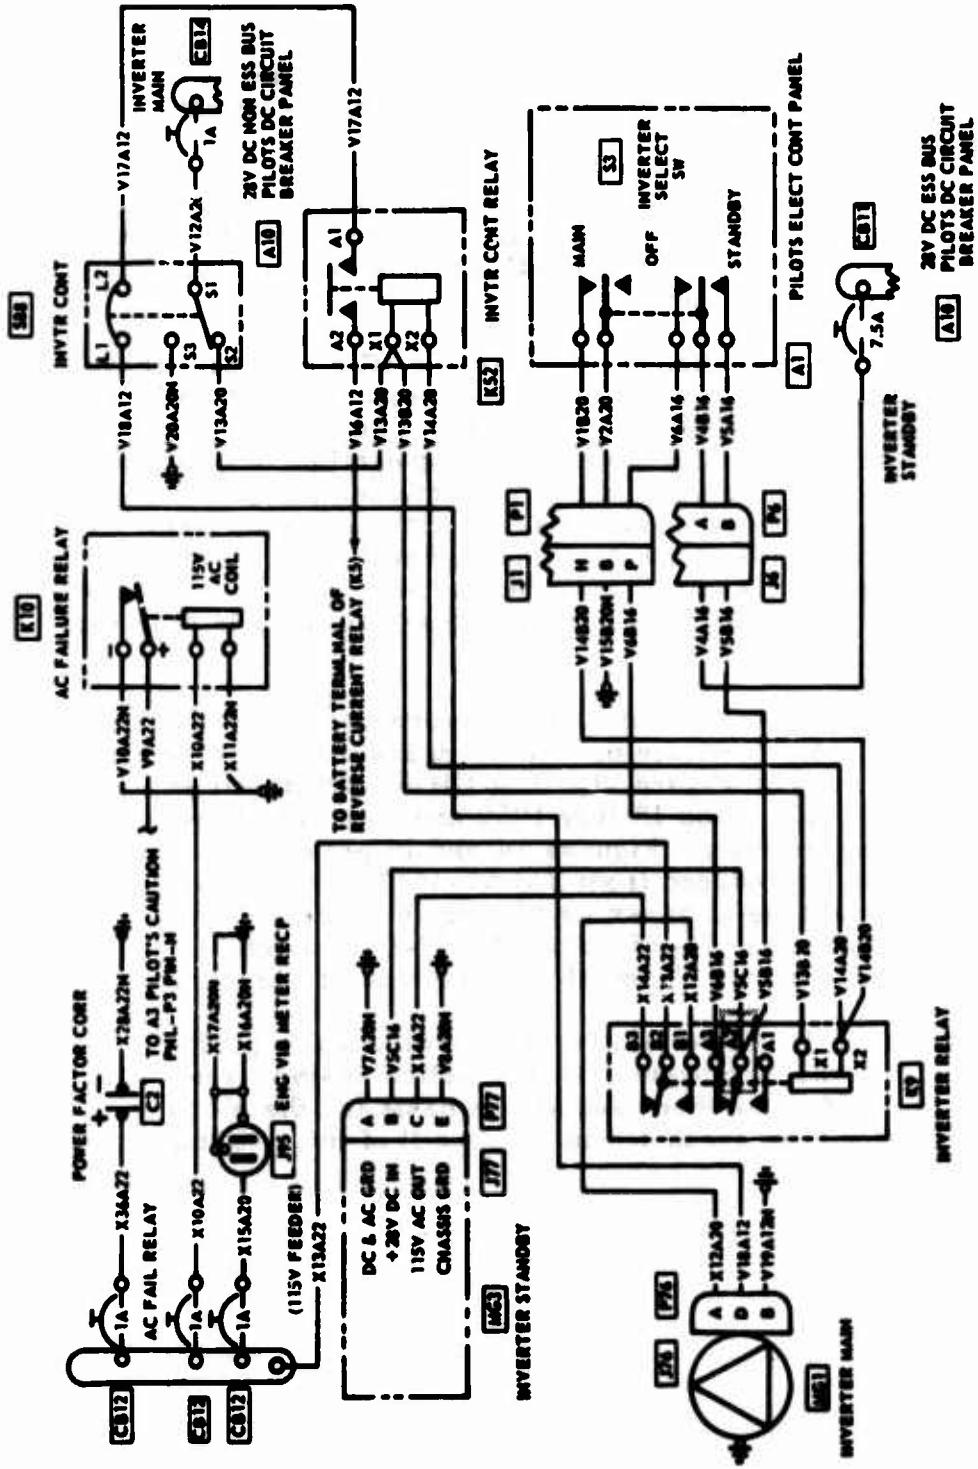

- Alternating Current Circuit — Equipment whose function is to generate and control alternating current within the electrical system.
- Battery Circuit — Equipment, including batteries, whose function is to distribute stored electrical energy within the electrical system.

- Electrical Controls Circuit — Equipment whose function is to select and protect electrical circuits.
- External Power Circuit — Equipment whose function is to receive externally provided electrical power for ground operation.
- Direct Current Circuit — Equipment whose function is to generate and control direct current within the electrical system.
- Electric Load Circuit — Equipment whose functions are to control trim actuation, lighting, fire warning, instrumentation, weapons subsystems, communications, navigation, heating, and emergency equipment.

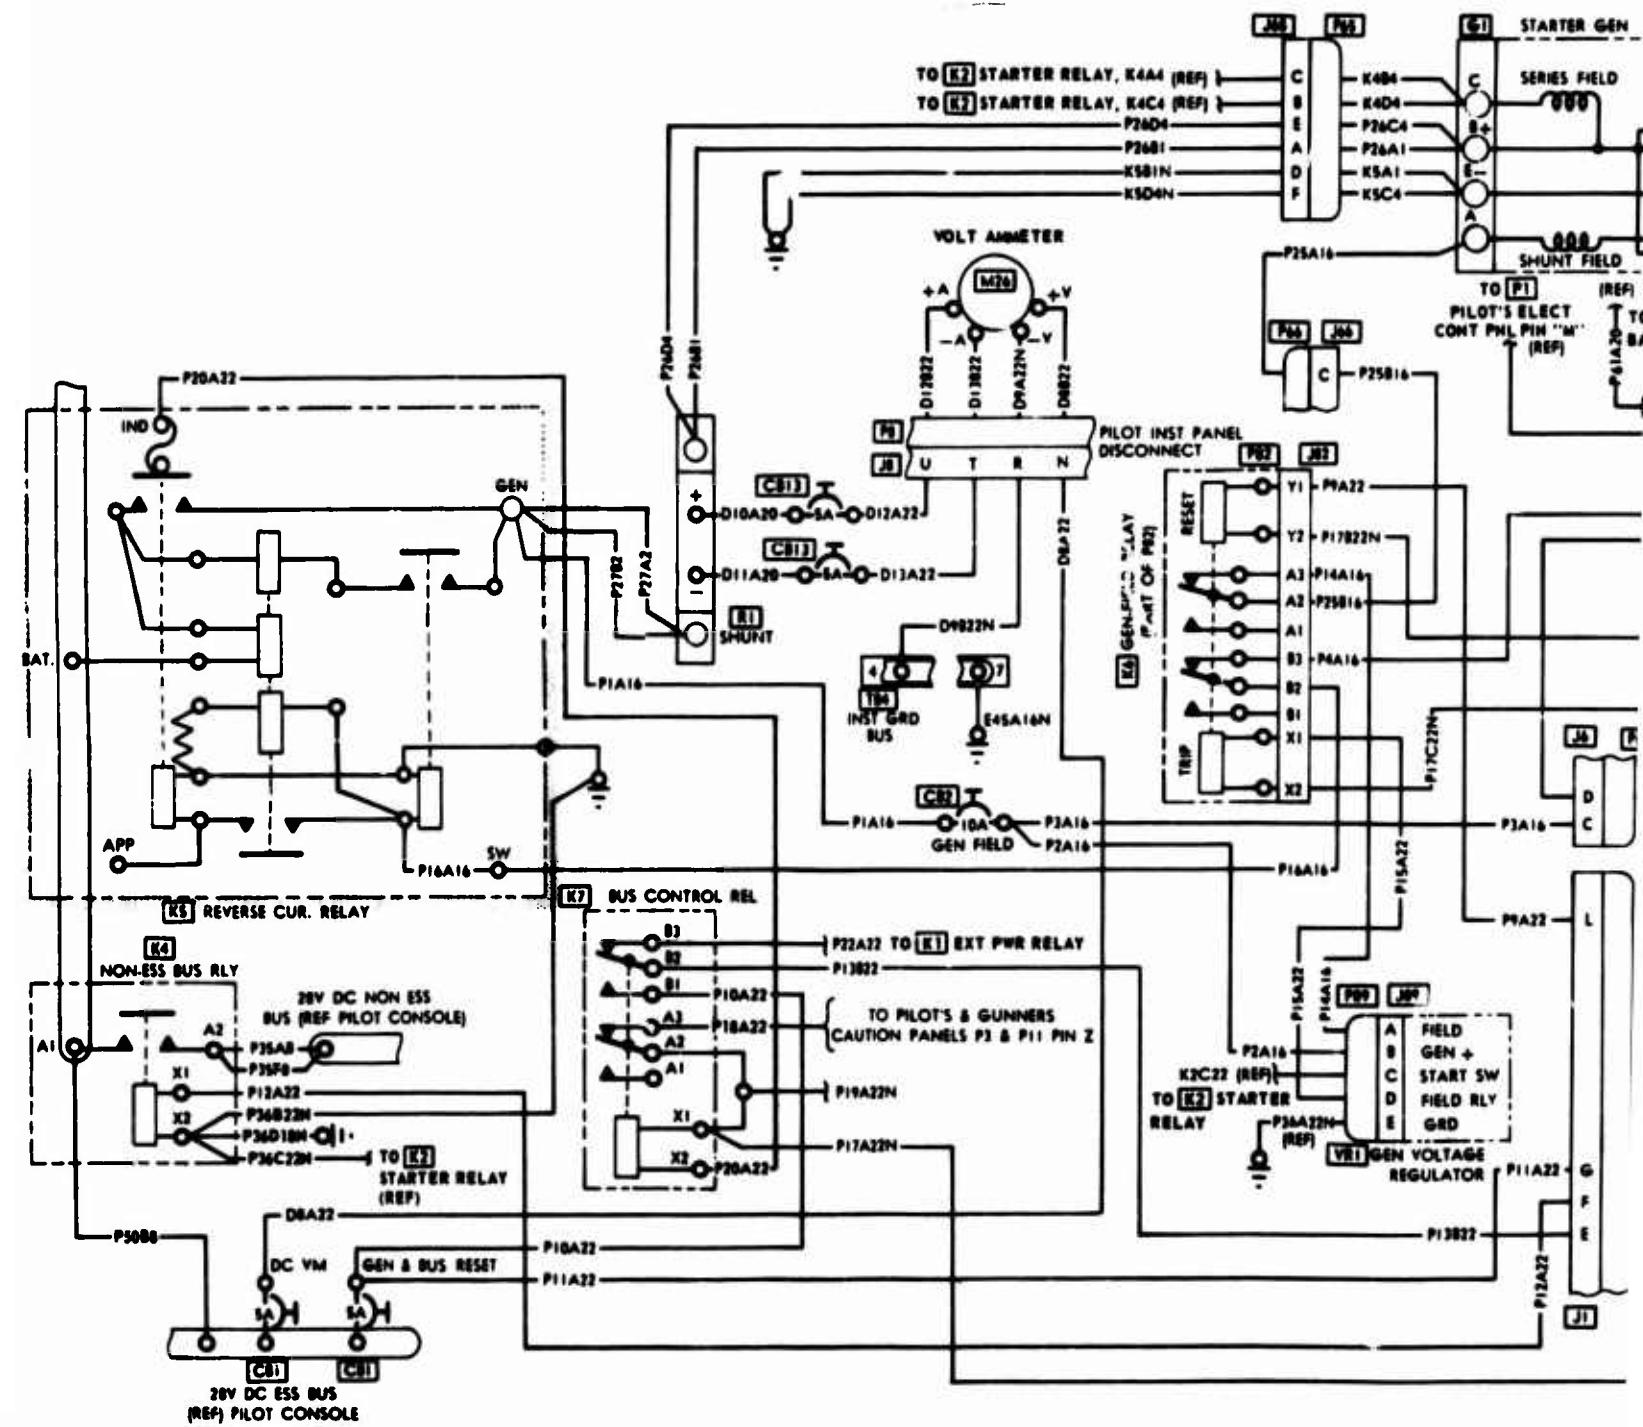

Figures 2 through 5 are the schematics of the AH-1G electrical subsystem reproduced from TM 55-1520-221-20, dated 10 September 1971 which were used to categorize the electrical subsystem into the functional groups previously described. Following this aggregation, a component "tree" is developed wherein each of the five functional groups is broken down into equipment and the component parts which comprise them. This tree format is a prerequisite to the development of the documentation tree wherein all pertinent documentation is ordered from the system down to the piece-part level. The AH-1G electrical subsystem tree is illustrated in Figure 6.

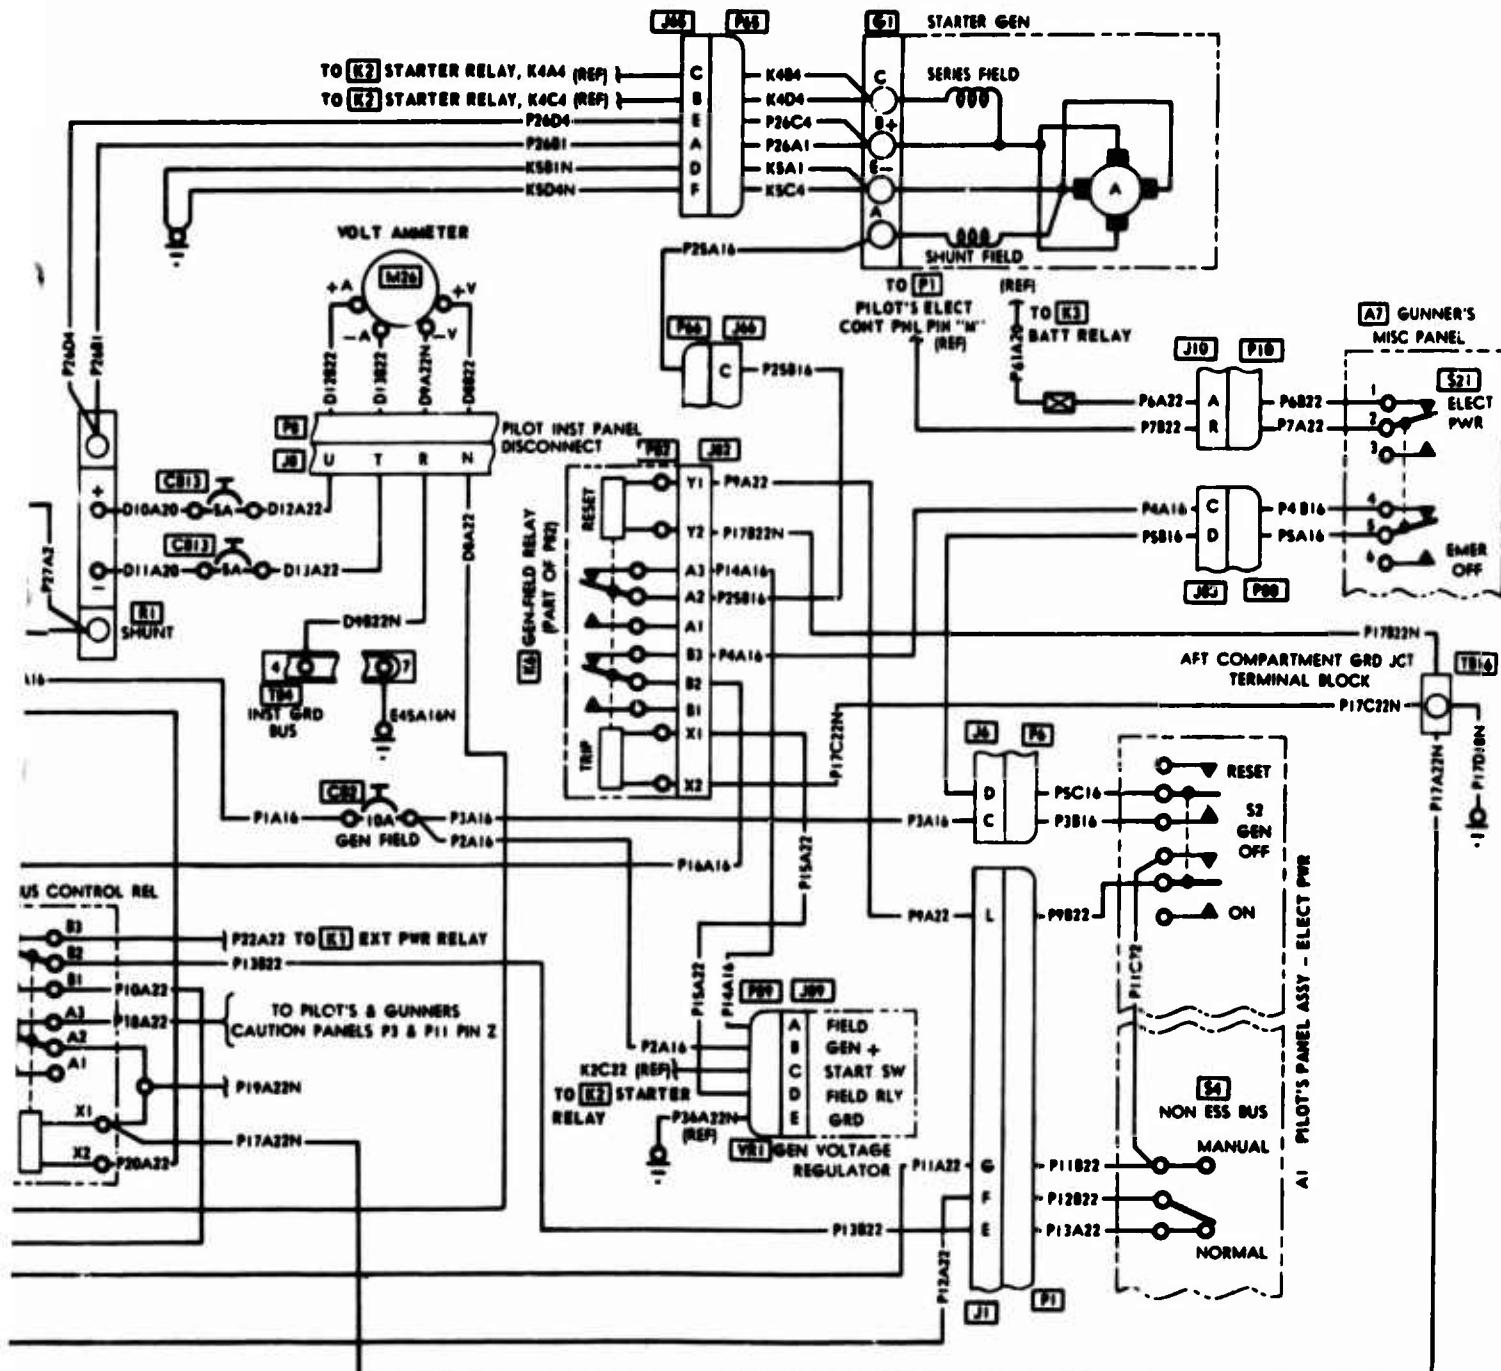

In similar fashion, the UH-1D/H schematics reproduced from TM 55-1520-210-20, dated 7 May 1969 are presented in Figures 7 through 10 and its tree is illustrated in Figure 11. The OH-6A schematic reproduced from TM 55-1520-214-20, dated 18 July 1969 and tree are shown as Figures 12 and 13 respectively. Figures 14 and 15 present the CH-47A electrical schematics reproduced from TM 55-1520-209-20, dated 29 May 1968, while the tree is shown as Figure 16. The CH-54A schematics reproduced from TM 55-1520-217-20-1/2, dated 24 April 1969, are provided in Figures 17 and 18 and the tree in Figure 19.

Upon completion of the five electrical system trees, a composite electric system tree was developed. This baseline system tree, illustrated in Figure 20, was then used as the basis for the electric system documentation tree presented in Volume II of this report.

## DOCUMENT CLASSIFICATION

During the electrical system documentation investigation, over 200 documents were identified, collected, sorted into generic classification groups, and analyzed for applicability to the Army helicopter electrical system. Appendix I lists those documents examined during this investigation. Of these 200 documents, 124 were determined to be applicable to one or more of the 5 representative helicopter types. The remaining documents were judged to be inapplicable to any of the representative helicopter types.

The documents examined were identified from the following sources:

1. Helicopter Technical Manuals (TM's)
2. Department of Defense Index of Specifications and Standards
3. Airframe manufacturers and component suppliers
4. U.S. Army Aviation Systems Command (AVSCOM), St. Louis, Missouri
5. Manufacturers' detailed design specifications for the CH-47A and CH-54A

### HELICOPTER TECHNICAL MANUALS

Following compilation of all pertinent documentation, the TM's applicable to the AH-1G, UH-1D/H, OH-6A, CH-47A, and CH-54A helicopters were reviewed to identify and classify each of the electrical system components. Table II lists the TM's that were utilized.

The helicopter repair parts manuals were used as the source documents for the applicable components list. These included:

1. AH-1G
  - TM 55-1520-221-20P
  - TM 55-1520-221-34P-1
2. UH-1D/H
  - TM 55-1520-210-20P-2
  - TM 55-1520-210-34P-2
3. OH-6A
  - TM 55-1520-214-20P
  - TM 55-1520-214-35P
4. CH-47A
  - TM 55-1520-209-20P
  - TM 55-1520-209-34P-2
5. CH-54A
  - TM 55-1520-217-20P-2
  - TM 55-1520-217-35P-2

	TM 55-1520-217-20P-2, "Organizational Maintenance Repair Parts and Special Tools List, Helicopter, Cargo Transport, CH-54A, CH-54B (Sikorsky)," dated July 1971
	TM 55-1520-217-35-1/2, "DS, GS and Depot Maintenance Manual, CH-54A Helicopter," dated April 1969
	TM 55-1520-217-35P-2, "DS, GS and Depot Maintenance Repair Parts and Special Tools List, CH-54A (Sikorsky)," dated 23 April 1969

Each component identified pertaining to the helicopter electrical system was identified by military standard (MS) number. Each standard was reviewed to determine if the standard was currently active for new designs or had been deemed inactive, cancelled or obsolete. These MS's were further reviewed to determine the military or federal specification that governs the design, testing, quality assurance requirements and provisions of the identified component. Each identified standard was then numerically sequenced and listed in Table III. This table displays the MS number, title, whether inactive, cancelled or obsolete for the new designs (indicated by an asterisk following the title), governing military or federal specification, and helicopter applicability. This latter categorization provides a ready cross-reference as to standardization of electrical systems component designs.

#### DEPARTMENT OF DEFENSE INDEX OF SPECIFICATIONS AND STANDARDS

The electrical system components identified during the analysis of the helicopter TM's were then used as the basis for research of the DODISS for applicable electrical system and component specifications. The alphabetical DODISS was surveyed to determine all military and federal specifications and standards applicable to that generic component type.

Some military specifications were noted to be interim specifications, as indicated by two zeros preceding the basic specification number. One such example is MIL-C-005015F (Navy), entitled, "Connectors, Electric, AN Type, General Specification For". The following legend is on the title page of this particular interim specification:

"This limited coordination Military specification has been prepared by the Naval Air Systems Command based upon currently available technical information, but it has not been approved for promulgation as a coordinated revision of Military Specification MIL-C-5015D. It is subject to modification. However, pending its promulgation as a coordinated Military specification, it may be used in procurement."

In such instances, both the basic and interim documents were examined for possible applicability. Additionally, all processes, practices and procedures applicable to the design, quality assurance and testing of electrical and related systems were identified in the DODISS.

#### U. S. ARMY AVIATION SYSTEMS COMMAND

Design data were also sought from the U. S. Army Aviation Systems Command (AVSCOM), St. Louis, Missouri, for those component types

for which applicable military specifications could not be identified. These data were supplied in the form of microfiche transparencies from which the military specifications used in some part of the design process were identified.

#### MANUFACTURERS' DETAILED DESIGN SPECIFICATIONS

Detailed design specifications for the Boeing-Vertol CH-47A and Sikorsky CH-54A helicopters were reviewed to ascertain all military specifications and standards used in the design of these helicopters.

#### DOCUMENTS NOT APPLICABLE

All documents that were reviewed but considered to be inapplicable to the design of Army helicopter electrical systems are shown as Appendix II. Rationale is provided for the inapplicability of each document so classified.

Documents which impact the design of helicopter electrical systems but are not considered to be electrical system documents are shown as Appendix III. These documents are applicable to aircraft hardware, processes, packaging and inspection procedures. Aircraft piece part hardware, i.e., grommets, boots, clamps, etc., and testing documents were only analyzed in a cursory manner, as they are not amenable to the imposition of reliability and maintainability requirements. These documents are shown on the documentation tree, Volume II of this report. The inspection, packaging, and process documents also were only analyzed in a very cursory manner. These documents should be included at the aircraft level documentation tree analysis because of their inherent interrelationship with all the aircraft subsystems, i.e., electrical, hydraulic, flight control, etc.

## DOCUMENT DEFICIENCY ANALYSIS

This section presents the results of the analysis of military specifications pertaining to electrical systems, equipments, components, and procedures. The pertinent documents identified during the data collection tasks as being applicable to helicopter electrical systems were reviewed, with primary attention given to those areas that, by their deficiencies, have a potentially adverse effect on reliability and maintainability.

### DOCUMENT DEFICIENCY CRITERIA

One of the more important considerations in performing a document deficiency analysis is the interstitial relationship of the design, testing, and quality assurance requirements and provisions, and their effect upon the ultimate design and life cycle cost of the Army helicopter electrical system. Figure 21 displays this interstitial relationship and all of the various requirements that should be considered during the development, qualification, and production phases of the helicopter electrical system and the constituent components. Another important facet of this type of analysis is the understanding that the strict imposition of any one of these identified requirements or provisions may cause intolerable adverse effects on other parameters. Ultimately, the helicopter and its electrical system may be adversely affected to such a degree that the mission requirements will not be achieved.

Another factor used during this analysis was the degree that the ultimate design is governed by the applicable military specification. While this was not a requirement that is normally considered in reliability and maintainability analyses, it was considered during this analysis to the degree that technological advancements may be restricted by the military specification. Military specifications that are too specific in their requirements do not allow for technological advances. This could severely constrain the expected reliability growth of the system, equipment, or component.

The detailed criteria used to identify specific deficiencies in these documents were established by developing the specific requirements, as shown in Figure 21, that should be considered by the designer to meet or exceed the operational parameters of U.S. Army helicopters.

The primary areas in each document that have been reviewed for deficiencies are the:

- Design Requirements
- Qualification Test Requirements, Procedures and Practices
- Quality Assurance Requirements and Provisions

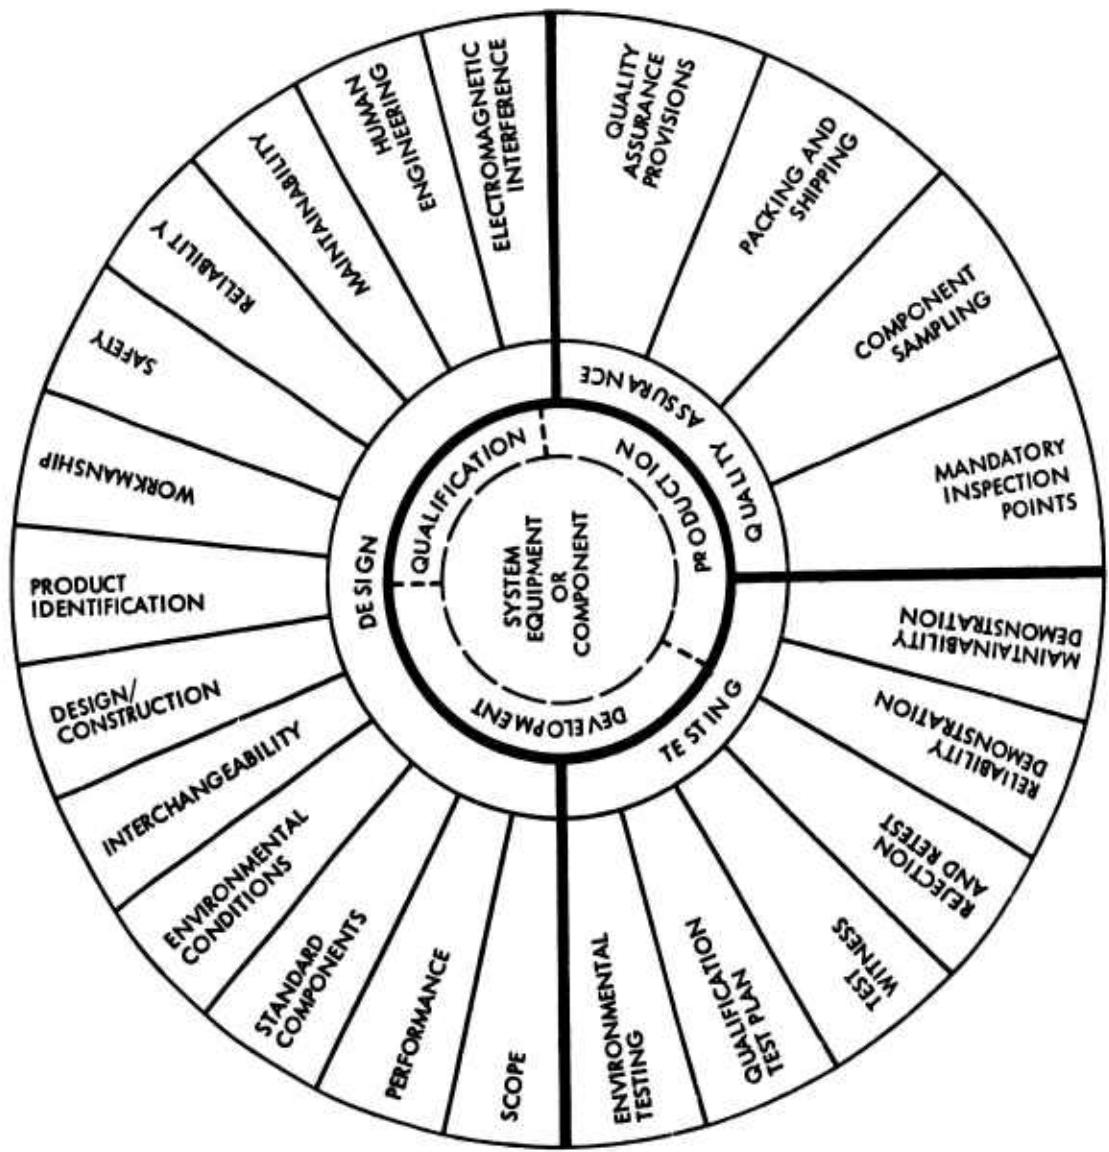

Figure 21. Electrical System Design, Testing, and Quality Assurance Requirements and Provisions.

## Design Requirements

The philosophy criteria used to analyze each document relative to design requirements are as follows:

1. Scope — Does the scope of the specification provide the designer with the types of applications for which the system, equipment or component is intended? If the specification is intended to apply only to ground-based applications, the operational stresses of a helicopter may exceed those provided by the specification. This could result in premature failure because operational parameters have been exceeded by use in the helicopter environment. On the other hand, if the intent of the specification is for a missile application, the design requirements may impose more than adequate reliability requirements, but the maintenance considerations may not be adequate for Army field use.
2. Performance — As with the scope, provisions must be made to ensure that the detailed operational requirements of the Army are considered by the designer. A mere listing of the performance parameters alone is not adequate unless these parameters are essentially the same as required by the operational use of the Army. A component or system can be built to meet or exceed the specification performance requirements and fail to meet the operational reliability or maintainability requirements.
3. Standard Components — Components on a Qualified Products List (QPL) are not necessarily qualified to the mission operational requirements of the Army. Standard component requirements should be related to the specific operational parameters that are expected to be experienced by the projected mission profile. Components that do not meet these requirements may fail prematurely when subjected to the Army helicopter operational environment.
4. Environmental Conditions — The requirements that are expressed in the military specification must be those that are imposed by the mission. Requirements that are expressed in quantitative values without reference to the expected service parameters are considered inadequate. Adverse environmental conditions such as high vibratory and extreme atmospheric conditions may cause insulation failures within electrical components and premature fatiguing or excessive wear. These factors must be adequately considered during the design of the components.

5. Interchangeability — The interchangeability requirements should consider the physical and functional parameters of the electrical system, equipment, and components to ensure all subsequent units are compatible and adequately interfaced with the electrical system and related systems. Components that are not completely interchangeable, both physically and functionally, may keep the helicopter and electrical system from achieving its operational availability requirements.
6. Design/Construction — The design and construction of the electrical system and its components, as governed by the military specification, must consider the projected operational parameters and environments to which the helicopter will be subjected. Additionally, the design requirements should not preclude the introduction of technological advancements impacting achievements of projected reliability growth.
7. Product Identification — Requirements for properly marking/identifying the components and/or equipments must be provided within the specification. These markings/identifications should include hazard or precautionary warnings, electrical ratings, interconnections, part numbers, and other pertinent data. Inadequately marked or identified components can contribute to personnel hazards and decreased availability due to increased maintenance times. The substitution of a different series of a similar type component may result in damage to the electrical system or decreased system reliability.
8. Workmanship — Workmanship requirements should be stated in clear and concise language that defines this requirement by reference to aircraft and electrical industry standards. The degradation of workmanship subsequent to reliability and maintainability demonstrations may result in the failure of the electrical system to maintain its operational availability.
9. Safety — Provisions should be included to impose systems safety programs as delineated in MIL-STD-882. Equipment designed without consideration for the safety of the operator and/or maintenance personnel or other components of the system or related systems could adversely affect the availability, or maintainability of the system. Poor safety features necessitate increased precaution during maintenance, resulting in increased maintenance man-hours expenditures.
10. Reliability — Reliability requirements stated quantitatively, as Mean-Time-Between-Failure (MTBF) values, are not considered to be adequate. An adequate reliability requirement is one that

is based on the projected mission requirements of the helicopter. Items designed to an MTBF value stated in a military specification may adversely affect the overall helicopter and/or system reliability requirement if the MTBF is not at least that required to meet the mission and/or system reliability.

11. Maintainability — Maintainability requirements must be stated with reference to the overall helicopter and/or system availability requirements. Consideration must also be given to the U.S. Army maintenance concepts, procedures, and practices. If these parameters are not considered, the item may not be compatible with the Army system and the helicopter availability and maintenance rates may be adversely affected.
12. Human Engineering — Human engineering requirements must consider the parameters delineated in MIL-STD-1472. Consideration should also be given to U.S. Army maintenance concepts, procedures, and practices. The absence of these considerations may have an adverse effect on the helicopter availability and maintenance man-hour expenditures.
13. Electromagnetic Interference — Provisions for eliminating or reducing electromagnetic interference must be included in all specifications for electrical and electronic equipments. False equipment failures induced by internally or externally generated electromagnetic energy will contribute to a lower system reliability.

#### Test Requirements, Procedures and Practices

The specific testing requirement criteria and philosophy used to conduct this analysis are as follows:

1. Environmental Testing — Each component of the electrical system should be subjected to environmental tests which simulate the Army operational environment. The test procedures of MIL-STD-810 and MIL-STD-202 should be used as representatives of the Army operational environment unless other knowledge is available for specific application. The effects of the environmental conditions, i.e., vibration, sand, and moisture, etc., on the reliability of the end item would identify inherent design weaknesses prior to the production phase.
2. Qualification Test Plan — A qualification test plan should include various categories of tests, as dictated by the design complexity, to ensure that the component meets or exceeds the design requirements imposed by military and detailed design specifications. The plan should provide for system compatibility, functional and flight testing of the component as required

by the design. The following statements define the rationale for qualification test plans which would adequately qualify the electrical system/components.

- a. System compatibility tests are necessary to ensure that all electrical system components and interfaces with other systems are compatible with the system operational and reliability requirements.
  - b. Functional tests are required to display that the component will perform its intended functions as required by the mission operating requirements.
  - c. Engineering flight tests should be imposed upon electrical systems and major components such as generators and bus tie equipment to ensure that the electrical system design is adequate and that any quality deficiencies will be identified prior to operational introduction.
3. Test Witness — The procuring activity should provide for test witnessing in those cases where the nature of the test or the inherent design of critical components require strict control. Other categories of tests should be witnessed on a random sampling basis by procuring activity representatives at the suppliers' or receiving activity sites. These representatives may be government personnel or manufacturing personnel designated by the procuring activity to perform the sampling. The witnessing of tests provides the Army with a high degree of assurance that the quality of the product is maintained such that the operational reliability is not degraded.
4. Rejection and Retest — Those components failing the initial qualification tests or subsequent sampling tests should be retested unless the failure can be isolated and categorized as a random failure. When a random failure occurs or a problem is encountered in the test procedures, the test should commence from the point of the failure and a mathematical analysis should be initiated to compute the results of the tests. If the failure is of the category that would necessitate a major redesign of the component prior to qualification, or require a significant increase in sampling frequency, complete information should be furnished to the procuring agency representative prior to continuing the test or submitting the redesigned item to retest. This latter procedure should be strictly imposed upon those components whose failure may be deemed catastrophic to the electrical system operation.

5. Reliability Demonstration — A reliability demonstration is required to ensure that the operational reliability requirements imposed by the detailed specifications are met or exceeded in the projected operating environment. This demonstration should include a formal plan in accordance with the provisions of MIL-STD-785. This demonstration will provide the Army with the necessary degree of assurance that the operational reliability is attained. The degree that this requirement should be imposed is governed by the complexity, criticality, and reliability requirements of the component. In most cases the electrical system components reliability demonstration would be conducted at the systems level, with each component being individually analyzed.
6. Maintainability Demonstration — A maintainability demonstration (service) test is required to ensure that the operational availability and maintenance man-hour per flight hour requirements imposed by the detailed specification are met or exceeded in the projected operating environment. This demonstration should include a formal plan in accordance with the provisions of MIL-STD-473. This demonstration will provide the Army with the necessary degree of assurance that the operational quantitative values are attained. The degree that this requirement should be imposed is governed by the complexity, criticality, maintenance concept, and maintainability requirements of the component. In most cases the electrical system components maintainability demonstration would be conducted at the systems level, with each component being individually analyzed.

#### Quality Assurance Requirements and Provisions

The quality assurance requirements and provisions that should be considered as a minimum for Army helicopter electrical systems are as follows:

1. Quality Assurance Provisions — Quality assurance is required to ensure that the component is subjected to quality assurance provisions and standards that meet or exceed the requirements imposed by the military and detailed design specifications. Quality assurance plans should be developed and implemented in accordance with MIL-Q-9858. The implementation of such quality assurance programs serves to maintain high standards in the production of components and a high degree of reliability.
2. Packing and Shipping — Packing and shipping requirements should be imposed to protect the component from damage during shipment and storage. Procedures should be provided such that a random sampling of the packing and unpacking techniques are closely monitored. These requirements and provisions should

- consider fragility of the component being procured by the specification. These procedures, when properly implemented, shall substantially reduce damage to the components during transit and storage and protect the component from environmentally-induced damage.
3. Component Sampling — Component sampling provisions and procedures should be imposed as delineated by MIL-STD-105. Infrequent sampling may allow defective components to be passed inadvertently. This could ultimately result in a potential degradation of the electrical system reliability and end item availability.
  4. Mandatory Inspection Points — Certain critical phases of the manufacture and assembly processes require in-process inspections by designated quality assurance personnel. Provisions and procedures should be imposed to ensure that these checks/tests/inspections be made at designated intervals as dictated by the complexity and criticality of the component. The implementation of these procedures serves to substantially reduce failures caused by manufacturing errors.

#### DOCUMENT ANALYSIS

The electrical system documents identified during the data collection task were analyzed using the criteria and philosophy identified in the preceding discussion. This required a detailed analysis of each area identified as impacting the reliability and maintainability and/or the procedures and practices used to inspect and test the item being procured. Each document was analyzed to determine if ambiguities existed within the document and between it and other controlling documents. The documents were categorized by generic component type with respect to the baseline electrical system block diagram tree as shown in Figure 20.

The document provisions were then identified as being adequate or inadequate. The inadequate and nonexistent provisions were then rated as having one of the following impacts on the electrical system reliability, availability, and maintainability:

1. Major Impact — Those deficiencies which could result in a substantial degradation of the helicopter and electrical system reliability, availability, and/or maintainability.
2. Significant — Those deficiencies that could result in some degradation of the helicopter and electrical system reliability, availability, and/or maintainability.
3. Insignificant — Those deficiencies that may result in little or no degradation of the electrical system reliability, availability, and/or maintainability.

The document analysis is presented in Appendix IV of this volume. The documents reviewed included all amendments, revisions and supplements that were available during this analysis. These documents are presented in generic groupings to facilitate understanding of the whole analysis process. A short description of each deficiency and its reliability, maintainability and availability impact category are presented in a tabular format.

The summary results of the document analysis are shown as Table IV. This analysis has revealed that five of the 124 documents evaluated can be considered adequate with respect to reliability and maintainability.

**TABLE IV. DOCUMENT DEFICIENCY MATRIX**

Parameter	% Deficient*
<b>Design Requirements:</b>	
● Design and Construction . . . . .	1.85
● Standard Components . . . . .	2.78
● Environmental Conditions . . . . .	34.26
● Interchangeability . . . . .	41.67
● Product Identification . . . . .	11.11
● Workmanship . . . . .	12.96
● Safety . . . . .	94.44
● Reliability Program . . . . .	90.74
● Maintainability Program . . . . .	89.81
● Human Engineering . . . . .	94.44
● Electromagnetic Interference . . . . .	37.04

<b>Testing:</b>	
● Environmental Testing . . . . .	37.04
● Rejection and Retest . . . . .	68.52
● Test Witness . . . . .	5.56
● Reliability and Maintainability Demonstration . . . . .	94.44
<b>Quality Assurance Requirements:</b>	
● Quality Assurance Program . . . . .	87.04
● Responsibility for Inspection . . . . .	66.67
● Component Sampling . . . . .	3.70
*Deficiency percentage is based on the 108 electrical system related documents excluding testing, hardware, deleted and required new documents.	

## ALTERNATIVE SELECTION ANALYSIS

The objective of the alternative selection analysis was to determine the feasible alternative for each document found deficient during the document deficiency analysis. These alternatives are intended to reduce or eliminate the potential adverse impact on reliability and maintainability attributed to deficient documents.

### EVALUATION METHODOLOGY

The criteria used to evaluate and select the alternative to the deficient documents were established by analyzing the status of the documents, the specific deficiencies, the potential impact of the deficiencies on reliability and maintainability, and the availability of substitute documents. When two or more documents for the same component existed, either at the system, equipment or component levels, or any combination thereof, and an ambiguity in reliability and maintainability requirements was found to exist, a determination was then made as to which requirements should be imposed.

The degree of deficiency for each document was determined from the document deficiencies analyses shown in Appendix IV to this report. This degree of deficiency is then correlated into the document action required to remove the inherent reliability and maintainability document deficiency. Five alternatives were then considered when reviewing each document related to helicopter electrical systems:

No Action (None) — Document is adequate without revision.

Minor Revision — Document has some deficiencies that have a significant adverse impact on reliability and maintainability.

Major Revision — Document has numerous deficiencies that have a significant adverse impact on reliability and maintainability and can be remedied by an extensive rewrite of the document.

Delete — Document has numerous deficiencies that have a significant adverse impact on reliability and maintainability and a substitute document is available. Documents falling into this category were not analyzed further.

Issue New Document — For those areas where no document is presently available for the generic classification, a document should be issued.

Also, where one or more documents are available, the document that best suits the reliability and maintainability requirements of the Army was identified.

## **ALTERNATIVE EVALUATION AND SELECTION**

The alternative evaluation and selection of identified electrical system specifications were accomplished using the criteria established in the preceding "Evaluation Methodology" discussion. Using the generic classification groups previously established in this investigation, each generic class of document was evaluated to determine the action required by the Army to assure that the document adequately imposes helicopter reliability and maintainability related requirements.

The alternative evaluation selection and supporting rationale for electrical system documents for each generic classification of electrical subsystems are shown in columnar format in Figures 22 through 29. Figure 22 is the analysis of the system level documents. Figures 23 through 27 display equipment level documents for the five electrical subsystems. Figure 28 displays selected load equipment documents relating to aircraft trim control. Figure 29 displays electrical component parts, and are listed generically by alphabet. The columnar headings used in the alternative evaluation and selection analysis are as follows:

**Generic Classification** — Generic classification of item controlled by document.

**Document Number** — Military specification or standard number assigned to the document.

**Document Action** — Action required for the document being analyzed.

No Action (None)  
Minor Revision  
Major Revision  
Delete  
Issue New Document

**Preferred Document** — The document has been found to contain the least reliability and maintainability related deficiencies and can be improved by use of the Supplemental Design Guide, Volume II of this report.

- Signifies the preferred approach found during the analysis
- Signifies that an alternative to the approach was found during the analysis
- ▲ Signifies that this document should be deleted
- Signifies that a new document is required

**Rationale** — The supporting rationale for the selection action for each document.

The summary of the document selection analysis is shown as Figure 30. This analysis has shown that three-fourths of all the document and generic classifications considered require major revision to the documents. The recommendations for new documents are shown in the recommendation section of this volume. Recommendations to improve existing documents are shown as Volume II, "Electrical System Supplemental Design Guide." These recommendations, if promulgated, will eliminate the inherent reliability and maintainability document deficiencies.

GENERIC CLASSIFICATION	DOCUMENT NUMBER	DOCUMENT ACTION	PREFERRED DOCUMENT	RATIONALE
Electrical System	MIL-STD-704A	None	•	This document delineates characteristics of electric power supplied to airborne equipment at the terminals.
	MIL-B-5087B	Minor	•	This document is applicable to protection against stray electrical phenomena in aerospace electrical systems. Promulgation of the supplemental design recommendations provided in Volume II of this report will remove the reliability and maintainability deficiencies that are inherent in the document.
	MIL-W-5088E	Minor	•	This document is applicable to selection and installation of aircraft wire. Promulgation of the supplemental design recommendations provided in Volume II of this report will remove the reliability and maintainability deficiencies that are inherent in the document.
	MIL-E-6051D	None	•	This document is applicable to electro-magnetic compatibility, and does not contain any deficiencies which impact on reliability or maintainability.

Figure 22. Electrical System Document Alternative Selection.

GENERIC CLASSIFICATION	DOCUMENT NUMBER	DOCUMENT ACTION	PREFERRED DOCUMENT	RATIONALE
	MIL-E-7016D	None	•	This document is applicable to aircraft electric load and power source analysis, and does not contain deficiencies which impact on reliability or maintainability.
	MIL-E-7080B	Major	•	This document is applicable to selection and installation of electrical equipment in aircraft. Promulgation of the supplemental design recommendations provided in Volume II of this report will remove the reliability and maintainability deficiencies that are inherent in the document.
	MIL-E-25499C	Major	•	This document is applicable to design and installation of electrical systems for military aircraft. Promulgation of the supplemental design recommendations provided in Volume II of this report will remove the reliability and maintainability deficiencies that are inherent in the document.

Figure 22 - Continued.

GENERIC CLASSIFICATION	DOCUMENT NUMBER	DOCUMENT ACTION	PREFERRED DOCUMENT	RATIONALE
Testing / Demonstration Requirements (Shown on tree in Volume II, but are not a part of final report SDG document improvement recommendations.)	MIL-T-8679	Minor	•	This document is applicable to ground testing of helicopter systems and could be made applicable to U. S. Army helicopter requirements through minor changes to test requirements.
	MIL-T-21200K	Major	•	This document is applicable to design and construction of equipment used in testing of aircraft electrical and electronic equipment at various maintenance levels.
	MIL-D-23222A (AS)	Major	•	This Navy document is applicable to the demonstration of fixed- and rotary-wing aircraft systems including electrical. This document could be made applicable to U. S. Army helicopter requirements only through extensive changes to test requirements.

Figure 22 - Continued.

GENERIC CLASSIFICATION	DOCUMENT NUMBER	DOCUMENT ACTION	PREFERRED DOCUMENT	RATIONALE
	MIL-D-25381A (USAF)	Major	•	This Air Force document is applicable to flight testing of aircraft electrical systems. This document could be made applicable to U. S. Army helicopter requirements only through extensive changes to test requirements.
	MIL-E-25500B (USAF)	Major	•	This Air Force document is applicable to mockup testing of aircraft electrical systems. This document could be made applicable to U. S. Army helicopter requirements only through extensive changes to test requirements.
	MIL-E-5422 (ASG)	Delete	▲	This document is applicable to environmental testing of aircraft electronic equipment and is inactive for new design. Use MIL-STD-810 or MIL-STD-202.
	MIL-E-5272C (ASG)	Delete	▲	This document is applicable to environmental testing of all aircraft equipment and is inactive for new design. Use MIL-STD-810.
	MIL-STD-202D	None	•	This document is applicable to environmental and physical characteristics tests for electrical and electronic items - especially smaller parts.

Figure 22 - Continued.

GENERIC CLASSIFICATION	DOCUMENT NUMBER	DOCUMENT ACTION	PREFERRED DOCUMENT	RATIONALE
Generator, Brush	MIL-G-6099A	Major	<input checked="" type="radio"/>	This document is applicable to air-cooled ac generators for aircraft. Promulgation of the supplemental design recommendations provided in Volume II of this report will remove the reliability and maintainability deficiencies that are inherent in the document.
	MIL-G-6340A	Major	<input checked="" type="radio"/>	This document is applicable to a specific type of generator governed by MIL-G-6099A. Promulgation of the supplemental design recommendations provided in Volume II of this report will remove the reliability and maintainability deficiencies that are inherent in the document.
	MIL-G-21075	Major	<input checked="" type="radio"/>	This Navy document is applicable to single generator, constant frequency, alternating current generators with regulators for aircraft. Promulgation of the supplemental design recommendations provided in Volume II of this report will remove the reliability and maintainability deficiencies that are inherent in the document.

Figure 23. Alternating Current Circuit Document Alternative Selection.

## CONCLUSIONS

The most salient points discovered during this investigation are that existing helicopter electrical system and related documents were prepared without due consideration given to continuing technological advancements, reliability growth requirements, projected environmental usage, and the varied mission requirements as set forth by the procuring activity. Consequently, these documents were found to be inadequate to meet the U. S. Army mission related requirements for helicopters. The promulgation of the supplemental design information provided in Volume II of this report will provide for the implementation of mission requirements into the development, testing, and production of the electrical system, equipments and components. These conclusions are based on the following findings of this analysis:

1. Military specifications and standards governing the design of electrical system, hardware, and components do not consider the mission requirements of Army aircraft.
2. Numerous electrical system related documents identified as the governing military specifications for component parts for Army helicopters are not readily identifiable as having aircraft or aeronautical application.
3. In approximately 90 percent of electrical system related documents, such important design requirements as reliability, maintainability, and reliability and maintainability demonstration are not included in the document.
4. Those documents that do contain reliability and maintainability requirements do not contain provisions for considering the specific requirements of the Army aircraft mission requirements, i. e., a 2000-hour MTBF does not necessarily meet mission availability requirements.
5. MIL-E-25499C was initially identified as controlling the design of the electrical system for Army aircraft. However, due to the inherent generalities with respect to the design, testing, and quality assurance requirements, as they relate to reliability and maintainability, MIL-E-25499C is virtually nonusable as a governing document.
6. Almost without exception, the electrical system documents do not delineate environmental conditions and/or testing that consider the specific Army mission requirements. Some of the more prevalent exclusions are vibration, sand, and dust test requirements.

## RECOMMENDATIONS

The most important recommendation derived from this investigation is that military and detailed design specifications used to govern the development, qualification, and production of helicopter electrical systems/components, should provide design, testing, and quality assurance requirements and provisions that adequately reflect the Army helicopter mission requirements. Numerous recommendations to revise, update, or delete existing documents, and requirements for new documents related to the Army helicopter electrical systems, are summarized in this section. Detailed recommendations to remove the inherent reliability and maintainability related document deficiencies are presented in Volume II of this report.

The summary of specific recommendations that resulted from this investigation are as follows:

1. The supplemental design information presented in Volume II of this report should be promulgated to the greatest extent feasible including the:
  - a. Revision of the identified documents to include these reliability and maintainability related requirements.
  - b. Appendage of this information to all future detailed and electrical or component system specifications.
  - c. Preparation of new military specifications and standards to ensure that reliability and maintainability related requirements are adequately considered.
2. A specification should be generated and promulgated which delineates the test and demonstration requirements of Army aircraft. This document could be patterned after MIL-D-23222A (AS), which delineates the specific requirements of U.S. Navy helicopter demonstration tests.
3. Incorporate Army environmental and operational requirements into all applicable design, test, and quality assurance requirements for electrical system and related component part specifications.
4. New documents and revisions to existing documents that are intended to govern the design of aircraft or aeronautical electrical systems and related components should adequately identify aircraft or aeronautical applications in the "Scope" or "Intended Use" section of the document.

5. Detailed design and test requirements such as environmental conditions, reliability, maintainability, and reliability and maintainability demonstration should be imposed upon the contractor by the detailed or system specifications.
6. Military specifications should be developed for the five electrical system generic functions that are not governed by existing military documentation. These new documents, when developed, should be promulgated to the greatest extent feasible to ensure that all aircraft electrical system component designs meet or exceed the requirements of the Army. These proposed documents with their recommended scope are:
  - a. Motor-Generators — Govern the design of 115-VAC, 400-Hertz motor-generator type inverters to operate essential equipments for ground operations.
  - b. Generator Control Panels — Govern the general design requirements of helicopter electrical power generator selection including switches, monitoring devices, and caution indicators.
  - c. Selector Switch Panel — Govern the general design requirements of helicopter electrical power generation selection including switches, monitoring devices and caution indicators.
  - d. Phase Sequence Network Relays — Govern the general design requirements of phase sensing and sequence switching devices to ensure proper phasing of externally generated alternating current.
  - e. Time Delay Battery Relay — Govern the general design requirements of time delay relays to ensure that they remain activated for a specific interval.
7. The documents that have been declared inactive for new design by the U.S. Air Force and should be considered as candidates for cancellation are:
  - a. MIL-E-5272C, "Environmental Testing, Aeronautical and Associated Equipment, General Specification for"
  - b. MIL-E-5422E, "Testing, Environmental, Aircraft Electronic Equipment"
  - c. MIL-P-26333A (USAF), "Panel, Protection, Electrical System, AC Generator System, General Requirements for"

8. The following documents should be used as written. They have been found to be completely adequate with respect to reliability and maintainability related requirements.
  - a. MIL-E-6051D, "Electromagnetic Compatibility", dated 5 July 1968
  - b. MIL-E-7061D, "Electric Load and Power Source Capacity, Aircraft Analysis of", dated 15 April 1965
  - c. MIL-STD-198C, "Capacitors, Selection and Use of", dated 29 September 1972
  - d. MIL-STD-199A, "Resistors, Selection and Use of", dated 16 October 1972
  - e. MIL-STD-704A, "Electrical Power, Aircraft, Characteristics and Utilization of", dated 5 May 1970

## GLOSSARY

<b>Availability</b>	A measure of the degree to which an item is in the operable and committable state at the start of the mission, when the mission is called for at an unknown (random) point in time.
<b>Demonstrated</b>	That which has been proven by the use of concrete evidence gathered under specified conditions.
<b>Failure</b>	The inability of an item to perform within previously specified limits.
<b>Failure Rate</b>	The number of failures of an item per unit measure of life (cycles, time, miles, events, etc., as applicable for the item).
<b>Human Engineering</b>	The area of human factors which applies scientific knowledge to the design of items to achieve effective man-machine integration and utilization.
<b>Human Factors</b>	A body of scientific facts about human characteristics. The term covers all biomedical and psychosocial considerations; it includes, but is not limited to, principles and applications in the areas of human engineering, personnel selection, training, life support, job performance aids, and human performance evaluation.
<b>Inherent</b>	Achievable under ideal conditions, generally derived by analysis, and potentially present in the design.
<b>Maintainability</b>	A characteristic of design and installation which is expressed as the probability that an item will be retained in or restored to a specified condition within a given period of time, when the maintenance is performed in accordance with prescribed procedures and resources.

Maintenance	All actions necessary for retaining an item in or restoring it to a specified condition.
Maintenance Man-Hours per Flight Hour	The number of maintenance hours expended per flight hour to keep the helicopter flying.
Mean-Time-Between-Failures (MTBF)	For a particular interval, the total functioning life of a population of an item divided by the total number of failures within the population during the measurement interval. The definition holds for time, cycles, miles, events, or other measures of life units.
Mean-Time-To-Repair (MTTR)	The total corrective maintenance time divided by the total number of corrective maintenance actions during a given period of time.
Quality Assurance	Quality control inspections subsequent to maintenance or manufacture at vendor or manufacturers' facilities.
Reliability	The probability that an item will perform its intended function for a specified interval under stated conditions.
Safety	The conservation of human life and its effectiveness, and the prevention of damage to items, consistent with mission requirements.

**APPENDIX I**  
**DOCUMENTS ANALYZED**

<u>DOCUMENT NUMBER</u>	<u>TITLE</u>
<u>MILITARY SPECIFICATIONS</u>	
MIL-I-10B	Insulating Compound, Electrical, Ceramic, Class L, 10 April 1967
MIL-R-11F	Resistors, Fixed, Composition (Insulated), 17 April 1967
MIL-C-17D	Cable, Radio Frequency, Coaxial, Dual Coaxial, Twin Conductor, and Twin Lead, 14 September 1964
MIL-R-22B	Resistors, Variable, Wire-Wound (Power Type), General Specification for, 10 September 1964
MIL-R-26E	Resistors, Fixed, Wire-Wound (Power Type), General Specification for, 11 July 1967
MIL-S-61B	Shunt, Instrument, External, 50 Millivolt (Lightweight Type), 21 October 1959
MIL-V-95B	Vibrators, Interrupter and Self-Rectifying, 29 December 1967
MIL-P-116E	Preservation, Methods of, 18 August 1967
MIL-T-152B	Treatment, Moisture-and Fungus-Resistant, of Communications, Electronic, and Associated Electrical Equipment, 6 June 1966
MIL-C-172C	Cases, Bases, Mounting, and Mounts, Vibration (For Use with Electronic Equipment in Aircraft), 20 October 1966
MIL-V-173C	Varnish, Moisture, and Fungus Resistant (For Treatment of Communications, Electronic and Associated Equipment), 5 November 1969
MIL-C-572G	Cords, Yarns and Monofilaments Organic Synthetic Fiber, 9 February 1972
MIL-W-583G	Wire, Magnet, Electrical, 6 March 1963

MIL-I-631D	Insulation, Electrical, Synthetic-Resin Composition, Non-Rigid, 20 June 1968
MIL-P-997D	Plastic Material, Laminated, Thermo-setting, Electrical Insulation, Sheets, Glass, Cloth, Silicone Resin, 14 June 1968
MIL-D-1000	Drawings, Engineering and Associated Lists, 10 February 1969
MIL-R-2726A	Receptacles, Receptacle Plugs, Switch and Receptacles, and Outlets (Electrical), General Specification for, 14 August 1969
MIL-G-3036A	Grommets, Elastic, Hot-Oil and Coolant Resistant, 13 May 1965
MIL-M-3171C	Magnesium Alloy, Processes for Pretreatment and Prevention of Corrosion On, 11 July 1966
MIL-I-3190B	Insulation Sleeving, Electrical, Flexible, Treated, 2 March 1964
MIL-C-3432D	Cable and Wire, Electrical (Power and Control; Semi-Flexible, Flexible, and Extra Flexible, 300 and 600 Volts), 5 July 1966
MIL-C-3767B	Connectors, Plug and Receptacle, Electrical (Power, Bladed Type), General Specification for, 27 April 1970
MIL-S-3786C	Switch, Rotary (Circuit Selector, Low Current Capacity), General Specification for, 19 May 1971
MIL-W-3795B	Wire, Electrical (Tinsel), 12 November 1968
MIL-S-3950E	Switches, Toggle, Environmentally Sealed, General Specification for, 24 July 1972
MIL-E-4158D (USAF)	Electronic Equipment Ground, General Requirements for, 12 March 1969
MIL-S-5002C	Surface Treatments and Metallic Coatings for Metal Surfaces of Weapons Systems, 22 May 1968
MIL-C-5015D	Connectors, Electric, AN Type, General Specification for, 9 June 1970

MIL-C-005015F (Navy)	Connectors, Electric, AN Type, General Specification for, 18 October 1972, Interim Specification (Navy only)
MIL-C-5026E	Cutout Relay, Engine Generator, 18 January 1971
MIL-W-5086B	Wire, Electric, Hookup and Interconnecting, Polyvinyl Chloride-Insulated Copper or Copper Alloy Conductor, 16 December 1970
MIL-B-5087B	Bonding, Electrical, and Lightning Protection, for Aerospace Systems, 31 August 1970
MIL-W-5088E	Wiring, Aircraft, Selection and Installation of, 28 March 1972
MIL-T-5091	Transmission, Power, Constant Ratio, General Specification for, 1 December 1949
MIL-E-5272C	Environmental Testing, Aeronautical and Associated Equipment, General Specification for, 18 September 1970
MIL-T-5350	Transmitter, Synchro Operated, Aircraft, General Specification for, 18 June 1970
MIL-F-5372C	Fuse, Current Limiter, Aircraft, 20 April 1965
MIL-F-5373C	Fuseholders, Block Type, Aircraft, 24 January 1964
MIL-T-5383 (USAF)	Transformer, Current, Type D-1, 9 April 1954
MIL-T-5422E	Testing, Environmental, Aircraft Electronic Equipment, 15 November 1961
MIL-B-5423B	Boot, Dust and Water Seal (For Toggle and Push Button Switches and Rotary Actuated Switches), General Specification for, 3 February 1972
MIL-T-5438	Tester, Abrasion, Electric Cable, 19 December 1949
MIL-T-5583B	Transmitter, Position, 28-Volt DC, 24 September 1963

MIL-L-5667B	Lighting Equipment, Aircraft Instrument Panel, General Specification for Installation of, 4 February 1964
MIL-C-5756B	Cable and Wire, Power, Electric, Portable, 9 June 1972
MIL-R-5757F	Relay, Electrical (For Electronic and Communication Type Equipment), General Specification for, 28 January 1972
MIL-C-5809F	Circuit Breaker, Trip Free, Aircraft, General Specification for, 27 April 1972
MIL-W-5846B	Wire, Electrical, Chromel, and/or Alumel, Thermocouple, 26 May 1972
MIL-E-6051D	Electromagnetic Compatibility Requirements, Systems, 5 July 1968
MIL-P-6063A	Packaging of Batteries, Storage, Charged and Dry-Uncharged and Moist, General Specification for, 4 August 1964
MIL-G-6099A	Generators and Regulators, Aircooled A-C Aircraft, General Specification for, 15 April 1958
MIL-R-6106F	Relays, Electric, General Specifications for, 27 January 1970
MIL-C-6136A	Conduit, Electrical, Flexible, Shielded, Aluminum Alloy for Aircraft Installations, 10 December 1965
MIL-B-6146	Batteries, Storage, Shielded, General Specification for, 15 May 1950
MIL-G-6162B	Generators, 30 Volt, Direct Current, Aircraft Engine Driven, and Starter Generators, General Specification for, 15 February 1972
MIL-R-6339	Regulator, Voltage, Type L-4, 4 December 1969
MIL-G-6340	Generator, A-C, Type C-3, Aircraft, 12 July 1957
MIL-L-6363E	Lamp, Incandescent, Aviation Service, General Specification for, 27 May 1969

MIL-B-6428A	Batteries, Storage, Integrally Shielded, 28 October 1969
MIL-R-6463A	Relay, Generator Equalizer Bus, Type A-1, 31 December 1952
MIL-R-6466B	Relay Armature, Exciter Protection, Type A-1, 28 July 1965
MIL-L-6484C	Lights, Cockpit Utility, Aircraft, General Specification for, 15 July 1969
MIL-L-6503G	Lighting Equipment, Aircraft, General Specification for Installation of, 27 August 1970
MIL-C-6521 (USAF)	Control, Inverter Changeover, Type A-2, 8 September 1959
MIL-T-6616A	Transformer, Voltage Adjusting, Type C-1, 27 April 1953
MIL-L-6723B	Lights, Aircraft, General Specification for, 16 February 1962
MIL-L-6730	Lighting Equipment, Exterior, Installation of Aircraft (General Specification), 9 June 1950
MIL-S-6746B	Switch, Rotary, Shielded, Aircraft Ignition, 20 June 1963
MIL-R-6749	Rheostat, Aircraft Power (AN-R-14), 6 July 1950
MIL-A-6752A	Ammeters, Voltmeters, Loadmeters, Direct Current, 3 March 1958
MIL-V-6753A	Voltmeters, 0-150V, 330-1200 Cycle, Alternating Current, 24 November 1958
MIL-C-6783	Clamps, Battery Hold-Down, 23 June 1950
MIL-S-6807D	Switch, Rotary, Selector, Power, General Specification for, 25 September 1968
MIL-R-6809	Regulator, Voltage, 30V, D. C. Generator, General Specification for, 14 December 1965
MIL-C-6818C	Clamps, Instrument Mounting, Aircraft, 13 April 1962

MIL-S-6872B	Soldering Process, General Specification for, 14 June 1968
MIL-E-7016D	Electric Load and Power Source Capacity, Aircraft, Analysis of, 15 April 1965
MIL-I-7032F	Inverters, Aircraft, General Specification for, 14 October 1970
MIL-I-7071B	Indicator, Temperature, Thermocouple, Hermetically Sealed, General Specification for, 25 February 1972
MIL-W-7072B	Wire, Electric, 600V, Aluminum, Aircraft, General Specification for, 4 September 1962
MIL-C-7078C	Cable, Electric, Aerospace Vehicle, General Specification for, 9 August 1971
MIL-C-7079	Circuit Breakers, Non Trip-Free, General Specification for, 23 March 1967
MIL-E-7080B	Electric Equipment, Aircraft, Selection and Installation of, 29 April 1968
MIL-T-7099D	Terminals, Lug and Splice, Crimp Style Aluminum, for Aluminum Aircraft Wire, 23 August 1971
MIL-T-7101A	Transmission, Power, Constant Speed, General Specification (Aircraft 056), 20 November 1951
MIL-C-7115D	Converter, Aircraft, General Specification for, 10 March 1970
MIL-F-7179D	Finishes and Coatings, General Specification for Protection of Aerospace Weapons Systems, Structures, and Parts, 3 March 1969
MIL-T-7210	Transformer, Current, Type D-2, 5 May 1958
MIL-I-7444C	Insulation Sleeving, Electrical, Flexible, 22 September 1971
MIL-R-7611	Relay, Armature, Type MA-1, 5 April 1957

MIL-R-7649	Relay, Armature, Exciter-Control, 115/200 Volt, 3 Phase 4-Wire, 21 May 1953
MIL-G-7703C	Guard, Switch, General Specification for, 9 February 1972
MIL-C-7762A	Compasses, Installation of, 18 January 1967
MIL-P-7788D	Panels, Information, Integrally Illuminated, 14 April 1967
MIL-R-7790	Resistor, Thermocouple Lead Spool, 27 December 1957
MIL-M-7793D	Meters, Time Totalizing, 31 December 1969
MIL-F-7872C	Fire and Overheat Warning Systems, Con- tinuous, Aircraft, Test and Installation of, 18 November 1966
MIL-T-7928F	Terminals, Lug and Splice, Conductor, Crimp Style, Copper, General Specifica- tion for, 19 July 1971
MIL-F-7929C	Flashers, Lights, Aircraft, 10 April 1964
MIL-P-7968A	Position Indicating Assemblies, Electrical, Wheels and Flaps, 23 March 1965
MIL-M-7969	Motor, Alternating Current, 400-Cycle, 115/200-Volt System, Aircraft, General Specification for, 25 May 1965
MIL-C-7974A	Cable Assemblies, Plugs and Receptacles, External Power, 15 June 1961
MIL-C-7989B	Covers, Light-transmitting, for Aero- nautical Lights, General Specification for, 8 March 1971
MIL-A-8064B (USAF)	Actuator and Actuating Systems, Aircraft, Electromechanical, General Requirements for, 22 January 1970
MIL-F-8180B	Floodlight, Electric, Incandescent 28-Volts, 20 Watts, Type MB-1, 30 January 1967
MIL-R-8373A	Relay, Current, Type D-1 (115-Volts, 400-Cycle, Single-Pole), 8 October 1963

MIL-C-8379A	Circuit Breaker, Electrically Operated, 3-Pole, Type A-1, 26 December 1957
MIL-I-8500B	Interchangeability and Replaceability of Component Parts for Aircraft and Missiles, 10 October 1960
MIL-H-8501A	Helicopter Flying and Ground Handling Qualities, General Requirements for, 3 April 1962
MIL-S-8516C	Sealing Compound, Synthetic Rubber, Electric Connectors, 21 June 1968
MIL-B-8565G	Batteries and Cells, Storage, Aircraft, 9 July 1971
MIL-C-8603	Clamp, Tube Support, Loop Type, 6 December 1968
MIL-M-8609B	Motors, D. C., 28V System, Aircraft, General Specification for, 26 July 1965
MIL-V-8610A	Valve, Fuel Shut-off, Solenoid Operated, 11 December 1968
MIL-A-8625C	Anodic Coatings, for Aluminum and Aluminum Alloys, 13 March 1969
MIL-I-8700A	Installation and Test of Electronic Equipment in Aircraft, General Specification for, 1 May 1970
MIL-D-8706B	Data and Test of Electronic Equipment in Aircraft, General Specification for, 15 August 1968
MIL-W-8777C	Wire, Electrical, Silicone-Insulated, Copper, 600-Volt, 200°C, 11 April 1968
MIL-F-8785B	Flying Qualities of Piloted Airplanes, 7 August 1969
MIL-8805C	Switches and Switch Assemblies, Sensitive and Push (Snap Action), General Specification for, 22 May 1972
MIL-S-8834C	Switches, Toggle, Positive Break, Aircraft, General Specification for, 15 August 1969

MIL-S-8932	Switches, Pressure, Aircraft, General Specification for, 28 January 1965
MIL-C-8956A	Clamp, Loop, Tube Support, 22 May 1972
MIL-D-9129B	Discharger, Aircraft, Electrostatic, General Specification for, 8 November 1967
MIL-R-9162	Relay, Generator, Reverse Current, 120-Volt DC, 250 Amperes, Type Q-1, 29 September 1953
MIL-T-9212	Transformer, Power, Autotransformers, and Step Down, 400-Cycle, 4 June 1965
MIL-I-9343B	Indicator, Temperature, Thermocouple, Engine Exhaust, Type MJ-1, 15 October 1970
MIL-G-9398C	Generator Tachometer, Two-Pole, High Temperature, Aircraft, 30 June 1966
MIL-S-9419D	Switch, Toggle, Momentary, Four-Position ON, Center OFF, 10 August 1962
MIL-Q-9858A	Quality Program Requirements, 16 December 1963
MIL-M-10304D	Meters, Electrical Indicating Panel Type, Ruggedized, General Specification for, 27 April 1971
MIL-C-10544C	Connectors, Plug and Receptacle (Electrical, Audio, Waterproof, Ten Contact, Polarized), 31 August 1964
MIL-T-10727A	Tin-Plating, Electrodeposited or Hot-dipped, for Ferrous and Non-Ferrous Metals, 20 May 1959
MIL-P-11268G	Parts, Materials, Processes Used in Electronic Equipment, 1 April 1971
MIL-C-11796B	Corrosion Preventative, Petrolatum, Hot Application, 17 November 1971
MIL-C-12000F	Cable, Cord, and Wire, Electric; Packaging of, 10 September 1971
MIL-C-12520C	Connectors, Plug and Receptacle (Electrical, Waterproof), and Accessories, General Specification for, 5 November 1965

MIL-S-12883B	Sockets and Accessories for Plug-in Electronic Components, General Specification for, 22 March 1969
MIL-M-13231A	Marking of Electronic Items, 9 May 1960
MIL-C-13777F	Cable, Special Purpose, Electrical, General Specification for, 15 September 1969
MIL-C-13909B	Conduit, Metal, Flexible, Electrical, Shielded, 3 January 1963
MIL-F-14256D	Flux, Soldering, Liquid (Rosin Base), 20 December 1963
MIL-P-15024	Plates, Tags, and Bands for Identification of Equipment, 10 May 1971
MIL-F-15160E	Fuses, Instrument, Power and Telephone, 30 January 1971
MIL-S-15291C	Switch, Rotary, Snap Action, 15 January 1969
MIL-T-15659G	Terminal, Lug, Solder and Phosphor Bronze, 30 June 1967
MIL-F-15743A	Switch, Rotary, Enclosed, 3 September 1959
MIL-M-16034A	Meter, Electrical, Indicating (Switchboard and Portable Types), 19 June 1967
MIL-M-16125C	Meter, Electrical, Frequency, 2 November 1964
MIL-E-16298	Electric Machines Having Rotating Parts and Associated Repair Parts, Packaging of, 28 February 1964
MIL-E-16366D	Electrical Clamp, Lug, and Conductor Splices - Pressure Grip, 23 April 1964
MIL-W-16878D (Navy)	Wire, Electrical, Insulated, High Temperature, 15 June 1967
MIL-I-16923E	Insulating Compound, Electrical, Embedding, 19 July 1963
MIL-M-17275B	Meter, Electrical, Indicating, Direct Current, 14 April 1969

MIL-E-17555G	Electronic and Electrical Equipment, Accessories, and Repair Parts, Packaging and Packing of, 15 April 1970
MIL-M-18012B	Markings for Aircrew Station Displays and Configuration of, 20 July 1964
MIL-I-18057A	Insulation Sleeving, Electrical, Flexible, Glass Fiber, Silicone Rubber Treated, 21 May 1965
MIL-I-18079B	Installation of Angle of Attack and Sideslip Systems, 31 March 1969
MIL-C-18148C	Connector, Plug, Electrical, Quick- disconnect, Battery, 21 April 1972
MIL-L-18276C	Lighting, Aircraft Interior, Installation of, 25 April 1969
MIL-N-18307D (Navy)	Nomenclature for Electronic, Aeronautical, and Aeronautical Support Equipment, Including Ground Support Equipment, 15 September 1969
MIL-F-18327C	Filter, High Pass, Low Pass, Band Pass, Band Suppression, and Dual Functioning, General Specification for, 25 May 1966
MIL-A-19401	Actuator, Electromechanical, Rotary, For AS-473/ASB-1, 21 March 1956
MIL-S-19500E	Semiconductor Devices, General Specifica- tion for, 8 September 1952
MIL-A-19531	Aircraft, Maintenance and Engineering Inspection, 24 December 1958
MIL-G-20699A	Grommets, Rubber, Split, General Purpose, 21 August 1967
MIL-S-20708C	Synchros, General Specification for, 27 August 1969
MIL-G-21075	Generator System, Single Generator, Con- stant Frequency, Alternating Current, Aircraft, General Specification for, 12 March 1958
MIL-C-21097C	Connectors, Electrical, Printed-Wiring Board, General Purpose, General Specifi- cation for, 30 May 1972

MIL-T-21200K	Test Equipment for Use with Electronic and Electrical Equipment, General Specification for, 30 November 1971
MIL-G-21480A	Generator System, 400 Hertz, A-C, Aircraft, General Specification for, 24 August 1971
MIL-I-21557B	Insulation Sleeving, Electrical, Flexible, 19 July 1963
MIL-C-21565B	Clamp, Loop, Plastic, Wire Support, 9 August 1971
MIL-S-21604B	Switch, Rotary, Multipole and Selector, 1 to 10 Ampere, 6 May 1970
MIL-F-21608D	Ferrule, Shield Terminating, Crimp Style, 13 January 1971
MIL-C-21617	Connector, Plug and Receptacle-Electrical, Rectangular, Polarized Shell, Miniature Type, 5 March 1959
MIL-L-21652A	Light, Beacon, Anticollision Aircraft, General Specification for, 1 October 1964
MIL-I-22076B	Insulation, Tubing, Electrical, Non-Rigid, Vinyl, Very Low Temperature Grade, 2 August 1973
MIL-I-22129C	Insulation, Tubing, Electrical, Poly-tetrafluoroethylene Resin, Non-Rigid, 18 February 1965
MIL-C-22520D	Crimping Tools, Contact, Electric, Hand, General Specification for, 31 March 1971
MIL-G-22529A (AS)	Grommet, Plastic, 22 October 1968
MIL-C-22751D	Coating System, Epoxy-Polyamide, Chemical and Solvent Resistant, Process for Application of, 2 March 1971
MIL-W-22759C	Wire, Electric, Fluorocarbon-Insulated Copper or Copper Alloy, 20 November 1970
MIL-R-22973	Reliability Index Determination for Avionics Equipment Models, General Specification for, 16 October 1961

MIL-E-23001A	Electric Generating System, Variable Speed Constant Frequency Aircraft, General Specification for, 1 July 1968
MIL-I-23053B	Insulation Sleeving, Electrical, Heat Shrinkable, General Specification for, 24 March 1970
MIL-S-23190C	Strap, Tie Down, Electrical Components, 13 January 1971
MIL-C-23216C	Contacts, Electric Connector (Navy), General Specification for, 27 March 1972
MIL-A-23282B	Actuator, 3 March 1969
MIL-F-23419B	Fuses, Instrument Type, General Specification for, 18 November 1970
MIL-F-23447	Fire Warning Systems, Aircraft, Radiation Sensing Type, Test and Installation of, 14 September 1962
MIL-S-23586C	Sealing Compound, Electrical, Silicone Rubber, Accelerator Required, 12 June 1972
MIL-A-23622 (WEP)	Actuator, Aircraft Electromechanical, Linear, Direct Current, 15 April 1963
MIL-R-23761	Regulator, Voltage, Static, 28-Volt Direct Current Generator, General Specification for, 7 May 1963
MIL-E-24021C	Electric Power Monitors, External, Aircraft, 2 April 1965
MIL-M-24041	Molding and Potting Compounds, Chemically Cured, Polyurethane (Polyether Based), 15 March 1971
MIL-C-24308A	Connectors, Electric, Rectangular, Miniature Polarized Shell, Rack and Panel, General Specification for, 15 May 1972
MIL-S-24236B	Switches, Thermostatic (Metallic and Bimetallic), General Specification for, 25 August 1972
MIL-I-24391A	Insulation Tape, Electrical, Plastic, Pressure-Sensitive, 15 January 1972

MIL-W-25038D	Wire, Electrical, High Temperature and Fire Resistant, Aircraft, 10 January 1972
MIL-K-25049	Knob, Control, Equipment, Aircraft, 25 July 1960
MIL-C-25050A	Colors, Aeronautical Lights and Lighting Equipment, 2 December 1963
MIL-F-25173	Fastener, Control Panel, Aircraft Equipment, 23 November 1959
MIL-E-25366C	Electric and Electronic Equipment and System, Guided Missile, Installation of, General Specification for, 27 February 1961
MIL-L-25467C	Lighting, Integral, Aircraft Instrument, General Specification for, 29 May 1964
MIL-E-25499C	Electrical Systems, Aircraft, Design and Installation of, General Specification for, 23 March 1970
MIL-M-25500B	Mockup Testing, Electrical System, Piloted Aircraft and Guided Missile, General Requirements for, 27 October 1969
MIL-G-25704A	Generating System, A-C, Aircraft, General Specification for, 13 June 1968
MIL-C-25955	Connectors, Electrical, Environment Resisting, Miniature, With Snap-In Contacts, 5 February 1960
MIL-B-26220C (USAF)	Batteries, Storage, Aircraft, Nickel-Cadmium, General Specification for, 18 January 1971
MIL-F-26301C	Flashers, Position Light, Aircraft, 6 December 1967
MIL-P-26333A	Panel, Protection, Electrical System, AC Generator System, General Requirements for, 12 May 1959
MIL-C-26482E	Connectors, Electric, Circular, Miniature, Quick-Disconnect, Environment Resisting, 17 January 1972
MIL-C-26500D	Connectors, General Purpose, Electrical, Miniature, Circular, Environment Resisting, General Specification for, 26 January 1971

MIL-P-26517A (USAF)	Power Supply, Transformer-Rectifier, Aircraft, General Specification for, 10 March 1970
MIL-C-26518J	Connectors, Electrical, Miniature, Rack and Panel, Environment Resisting 200°C Ambient Temperature, 23 June 1972
MIL-G-26611B	Generator Tacometer, GEU-7/A, Miniature, 27 October 1969
MIL-C-26636A (USAF)	Contacts, Crimp Style, For Electrical Connectors, 21 September 1961
MIL-C-26637	Connectors, Coaxial, Radio Frequency, Series LT, General Specification for, 4 December 1963
MIL-C-27072A (USAF)	Cable, Special Purpose, Electrical, Multi-conductor, 7 August 1969
MIL-L-27160B	Lighting, Instrument, Integral, White, General Specification for, 4 December 1969
MIL-I-27273A	Inverter, Power, Static, General Specification for, 12 March 1970
MIL-T-27493A	Transformer, Variable, Single Phase, 400 Cycles, General Specification for, 30 October 1964
MIL-C-27500A	Cable, Electrical, Shielded and Unshielded, Aircraft and Missile, 24 February 1971
MIL-C-27699	Connector, Plug, Electrical Connector, Receptacle, Electrical (Heavy Duty, Waterproof), 2 October 1961
MIL-R-38100B (USAF)	Reliability and Quality Assurance Requirements for Established Reliability Parts, General Specification for, 15 June 1964
MIL-C-38300A	Connectors, Electrical Circular, Multi-contact, High Environment, Quantitative Reliability, General Specification for, 15 December 1970
MIL-M-38510A	Microcircuits, General Specification for, 2 November 1969

MIL-C-38999C	Connectors, Electrical, Circular, Miniature, High Density, Quick Disconnect, Environmental Resisting, Removable Crimp Type Contact, Reliability Assurance, 7 April 1972
MIL-C-39010B	Coils, Fixed, Radio Frequency, Molded, Established Reliability, General Specification for, 5 August 1968
MIL-C-39012B	Connectors, Coaxial, Radio-frequency, General Specification for, 9 April 1970
MIL-T-39013A	Transformers and Inductors (Audio and Power), Established Reliability for, 2 March 1970
MIL-C-39019A	Circuit Breakers, Magnetic, Low Power, Sealed, Trip-Free, General Specification for, 16 March 1971
MIL-C-39020	Crystal Units, Quartz, Established Reliability, General Specification for, 2 December 1964
MIL-F-39025	Filters, High Pass, Low Pass, Band Pass, Band Suppression, and Dual Functioning, Established Reliability, General Specification for, 24 February 1965
MIL-C-39029	Contacts, Electric, General Specification for, 6 April 1972
MIL-G-45204B	Gold Plating, Electrodeposited, 26 February 1971
MIL-I-45208A	Inspection System Requirements, 16 December 1963
MIL-C-45662A	Calibration System Requirements, 9 February 1962
MIL-S-45743C	Soldering, Manual Type, High Reliability, Electrical, Electronic, Instrument, Communication, and Radar for Aerospace, and Control Systems, Procedure for, 15 June 1970
MIL-E-45782B	Electrical Wiring, Procedures for, 28 December 1967

MIL-I-46058C	Insulating Compound, Electrical (For Coating Printed Circuit Assemblies), 25 March 1971
MIL-H-46355A	Human Engineering Requirements for Military Systems, Equipment, and Facilities, 29 March 1968
MIL-Q-50301 (MU)	Quality Control System, Requirements for, 6 May 1969
MIL-C-55021B	Cables, Twisted Pairs and Triples, Internal Hookup, General Specification for, 13 February 1970
MIL-P-55034A	Powered Magnetic Material, Molded, Stability of (For Cores Used in Electrical and Electronic Parts), 30 January 1963
MIL-C-55074D	Connector, Plug, Electrical U-185/G, Connector, Receptacle, Electrical U-186/G, Connector, Receptacle, Electrical U-187/G, Contact Assembly, Electrical, MX 3227/G, 15 May 1969
MIL-C-55081B	Connector, Plug, Electrical, U-176/G, Connector, Plug, Electrical, U-319/G, Connector, Receptacle, Electrical, U-121/G, Connector, Receptacle, Electrical, U-122/G, 22 May 1967
MIL-C-55116A	Connectors, Miniature Audio, Five Pin, 15 November 1965
MIL-B-55118A	Batteries, Storage (Cells), Vented, Nickel-Cadmium, 14 June 1971
MIL-B-55130	Batteries, Storage, Sealed, Nickel-Cadmium, 19 May 1961
MIL-T-55155A	Terminals, Feed-Thru (Insulated) and Terminals, Study (Insulated and Non-insulated), General Specification for, 27 October 1971
MIL-T-55156	Terminals, Lug, Splices, Conductor, Screw Type, General Specification for, 8 July 1965
MIL-T-55164A	Terminal Board, Molded, Barrier, Screw and Stud Types, and Associated Accessories, General Specification for, 22 July 1970

MIL-C-55181A	Connector, Plug and Receptacle, Intermediate (Electrical, Waterproof), General Specification for, 29 April 1968
MIL-C-55235	Connector, Coaxial, Radio Frequency, Series TPS, 2 July 1963
MIL-C-55302A	Connector, Printed Circuit Subassembly and Accessories, 15 August 1969
MIL-S-55433A	Switch Capsules, Dry Reed Type, General Specification for, 21 November 1968
MIL-C-55543A	Cable, Electrical, Flat Multiconductor, Flexible, Unshielded, 6 October 1971
MIL-C-55544A	Connectors, Electrical, Environment Resistant, For Use with Flexible Flat Conductor Cable and Round Wire, General Specification for, 25 June 1971
MIL-S-55556 (EL)	Specification, Preparation, Installation, and Acceptance of Electronics Equipment in Aircraft, 4 October 1967
MIL-G-62075	Generator System, Alternator Rectifier, 30/80 Amperes, 28-Volts, 22 November 1967
MIL-I-63026	Manual, Technical, for Army Aircraft, 2 September 1969
MIL-I-81023B	Inductor, 28V D.C. Laboratory Test, General Specification for, 6 December 1965
MIL-W-81044A	Wire, Electric, Crosslinked, Polyalkene Insulated, Copper, 30 November 1970
MIL-L-81174	Lights, Landing, Aircraft, Retractable, 20 January 1968
MIL-I-81219A	Indicator, Elapsed Time, Electrochemical, 6 August 1970
MIL-M-81260	Manual, Technical, Aircraft Maintenance, 18 May 1965
MIL-P-81279	Power Supply, Miniature, General Specification for, 1 August 1965

MIL-P-81338	Power Supply, Transistorized, Direct Current, Regulated, General Specification for, 18 November 1965
MIL-W-81381 (AS)	Wire, Electric, Polyimide-Insulated, Copper and Copper Alloy, 12 November 1970
MIL-C-81511C	Connector, Electrical, Circular, High Density, Quick Disconnect, Environment Resisting, and Accessories, General Specification for, 30 October 1970
MIL-M-81531	Marking of Electrical Insulating Materials, 2 May 1967
MIL-I-81550A	Insulating Compound, Electrical Embedding, Reversion Resistant Silicone, 9 March 1970
MIL-P-81653 (AS)	Power Controller, Solid State, General Specification for, 17 November 1969
MIL-C-83723A	Connectors, Electric, Circular, Environment Resisting, 30 June 1972
MIL-T-81768	Transformer-Rectifier, TEK-9/A24B-4(V), 30 November 1970

#### STANDARDS

MIL-STD-8C	Dimension and Tolerancing, 1 January 1968
MIL-STD-12C	Abbreviations for Use on Drawings, Specifications, Standards, and in Technical Documents, 15 June 1968
MIL-STD-100A	Engineering Drawing Practices, 1 October 1967
MIL-STD-104B	Limits for Electrical Insulation Color, 31 December 1970
MIL-STD-105D	Sampling Procedures and Tables for Inspection by Attributes, 20 March 1964
MIL-STD-106A	Mathematical Signs and Symbols for Use in Physical Sciences and Technology, 4 April 1969
MIL-STD-109B	Quality Assurance Terms and Definitions, 4 April 1969

MIL-STD-129E	Marking for Shipment and Storage, 20 April 1970
MIL-STD-130D	Identification Marking of U.S. Military Property, 30 July 1971
MIL-STD-143B	Standards and Specifications, Order of Precedence for the Selection of, 12 November 1969
MIL-STD-195	Marking of Connection for Electric Assemblies, 7 February 1958
MIL-STD-198C	Capacitor, Selection and Use of, 29 September 1972
MIL-STD-199A	Resistor, Selection and Use of, 16 October 1972
MIL-STD-202D	Test Methods for Electronic and Electrical Component Parts, 15 April 1970
MIL-STD-210A	Climatic Extremes for Military Equipment, 30 November 1958
MIL-STD-250C	Aircrew Station Controls and Displays for Rotary Wing Aircraft, 8 July 1958
MIL-STD-255A	Electric Voltages, Alternating and Direct Current, 29 January 1957
MIL-STD-280A	Definition of Item Levels, Item Exchange- ability, Models, and Related Terms, 7 July 1969
MIL-STD-411D	Aircrew Station Signals, 30 June 1970
MIL-STD-414	Sampling Procedures and Tables for Inspection of Variables for Percent 9 Defective, 11 June 1957
MIL-STD-417	Rubber Composition, Vulcanized General Purpose, Solid, 10 September 1957
MIL-STD-446B	Environmental Requirements for Electronic Component Parts, 2 September 1970
MIL-STD-454C	Standard General Requirements for Electronic Equipment, 1 May 1972

MIL-STD-461A	<b>Electromagnetic Interference Characteristics, Requirements for Equipment,</b> 9 February 1971
MIL-STD-462	<b>Electromagnetic Interference Characteristics, Measurement of,</b> 9 February 1971
MIL-STD-463	<b>Definition and System of Units, Electromagnetic Interference Technology,</b> 9 June 1966
MIL-STD-470	<b>Maintainability Program Requirements (for Systems and Equipments),</b> 21 March 1966
MIL-STD-471	<b>Maintainability Demonstration,</b> 9 April 1968
MIL-STD-473	<b>Maintainability Verification/Demonstration Evaluation for Aeronautical Systems,</b> 3 May 1971
MIL-STD-480	<b>Configuration Control - Engineering Changes, Deviations, and Waivers,</b> 30 October 1968
MIL-STD-490	<b>Specification Practices,</b> 1 February 1969
MIL-STD-681B	<b>Identification Coding and Application of Hookup and Lead Wire,</b> 6 February 1967
MIL-STD-686A	<b>Cable and Cord, Electrical; Identification Marking and Color Coding of,</b> 13 July 1972
MIL-STD-690	<b>Failure Rate Sampling Plans and Procedures,</b> 12 August 1971
MIL-STD-704A	<b>Electric Power, Aircraft, Characteristics and Utilization of,</b> 5 May 1970
MIL-STD-721B	<b>Definition of Effectiveness Terms for Reliability, Maintainability, Human Factors, and Safety,</b> 10 March 1970
MIL-STD-749B	<b>Preparation and Submission of Data for Approval of Non-Standard Electronic Parts,</b> 29 August 1969
MIL-STD-756A	<b>Reliability Prediction,</b> 5 May 1963
MIL-STD-757	<b>Reliability Evaluation from Demonstration Data,</b> 19 June 1964

MIL-STD-765A	Compass Swinging, Aircraft, General Requirements for, 4 January 1967
MIL-STD-778	Maintainability Terms and Definitions (Cancelled)

**APPENDIX II**  
**RELATED INAPPLICABLE DOCUMENTS**

The following military specifications were collected for review. Examination revealed that they did not have application to the helicopter electrical system report.

<u>DOCUMENT NUMBER</u>	<u>TITLE</u>	<u>APPLICATION</u>
MIL-C-17D	Cable, Radio Frequency; Coaxial, Dual Coaxial, Twin Conductor, and Twin Lead	Radio frequency transmission
MIL-S-61B	Shunt, Instrument, External, 50 Millivolt (Lightweight Type)	Nonaviation
MIL-V-95B	Vibrators, Interrupter and Self-Rectifying	Electronic equipment
MIL-C-172C	Cases; Bases, Mounting; and Mounts, Vibration (For Use with Electronic Equipment in Aircraft)	Use in helicopters not permitted
MIL-C-572G	Cords, Yarns and Monofilaments Organic Synthetic Fiber	Nonaviation
MIL-W-583G	Wire, Magnet, Electrical	Nonaviation
MIL-R-2726A	Receptacles, Receptacle Plugs, Switch and Receptacles, and Outlets (Electrical), General Specification for	Shipboard
MIL-C-3432D	Cable and Wire, Electrical (Power and Control; Semi-Flexible, Flexible, and Extra Flexible, 300 and 600 Volts)	Nonaviation
MIL-C-3767B	Connectors, Plug and Receptacle, Electrical (Power, Bladed Type), General Specification for	Nonaviation

MIL-S-3786C	Switch, Rotary (Circuit Selector, Low Current Capacity), General Specifications for	Airborne electronics/communications
MIL-W-3795B	Wire, Electrical (Tinsel)	Nonaviation
MIL-E-4158D (USAF)	Electronic Equipment Ground; General Requirements for	Ground electronics
MIL-C-5015D	Connectors, Electric, AN Type, General Specification for	Inactive for USAF procurement
MIL-C-005015F (Navy)	Connectors, Electric, AN Type, General Specification for	Interim specification (Navy only)
MIL-T-5091	Transmission, Power, Constant Ratio: General Specification for	Power plant system
MIL-E-5272C	Environmental Testing, Aeronautical and Associated Equipment, General Specification for	Inactive for Air Force new design
MIL-T-5422E	Testing, Environmental, Aircraft Electronic Equipment	Electronic, inactive for new design
MIL-T-5438	Tester, Abrasion, Electric Cable	Inactive for Air Force procurement
MIL-L-5667B	Lighting Equipment, Aircraft Instrument Panel, General Specification for Installation of	Aircraft lighting subsystem
MIL-L-6363E	Lamp, Incandescent, Aviation Service, General Specification for	Aircraft lighting subsystem
MIL-L-6484C	Lights, Cockpit Utility, Aircraft, General Specification for	Aircraft lighting subsystem
MIL-L-6503G	Lighting Equipment, Aircraft, General Specification for Installation of	Aircraft lighting subsystem

MIL-T-6616A	Transformer, Voltage Adjusting, Type C-1	Tetrahedron
MIL-L-6723B	Lights, Aircraft, General Specification for	Aircraft lighting subsystem
MIL-L-6730	Lighting Equipment, Exterior, Installation of Aircraft (General Specification)	Aircraft lighting subsystem
MIL-C-6818C	Clamps, Instrument Mounting, Aircraft	Aircraft instruments
MIL-S-6872B	Soldering Process, General Specification for	Non-electrical
MIL-I-7071B	Indicator, Temperature, Thermocouple, Hermetically Sealed, General Specification for	Turbine temperature
MIL-T-7101A	Transmission; Power, Constant Speed: General Specification for	Power plant accessories
MIL-C-7762A	Compasses, Installation of	Non-electrical
MIL-P-7788D	Panels, Information, Integrally Illuminated	Information display
MIL-R-7790	Resistor, Thermocouple, Lead Spool	Thermocouple leads
MIL-M-7793D	Meters, Time Totalizing	Equipment operating time
MIL-F-7872C	Fire and Overheat Warning Systems, Continuous, Aircraft, Test and Installation of	Engine, etc., fire warning
MIL-F-7929C	Flashers, Lights, Aircraft	Aircraft lighting subsystem
MIL-P-7968A	Position Indicating Assemblies, Electrical, Wheels and Flaps	Aircraft instruments
MIL-C-7989B	Covers, Light-Transmitting, for Aeronautical Lights, General Specification for	Aircraft lighting subsystem

MIL-F-8180B	Floodlight, Electric Incandescent, 28-Volts 20 Watts, Type MB-1	Aircraft lighting subsystem
MIL-V-8610A	Valve, Fuel Shut-off, Solenoid Operated	Aircraft fuel system
MIL-F-8785B	Flying Qualities of Piloted Airplanes	Fixed wing
MIL-S-8932	Switches, Pressure, Aircraft, General Specification for	Liquid pressure
MIL-I-9343B	Indicator, Temperature, Thermocouple, Engine Exhaust, Type MJ-1	Power plant
MIL-G-9398C	Generator Tachometer, Two- Pole, High Temperature, Aircraft	Engine RPM
MIL-M-10304D	Meters, Electrical Indicating Panel Type, Ruggedized, General Specification for	Field equipment
MIL-C-10544C	Connectors, Plug and Receptacle (Electrical, Audio, Waterproof, Ten Contact, Polarized)	Field equipment
MIL-C-12520C	Connectors, Plug and Receptacle (Electrical, Waterproof), and Accessories, General Specification for	Ground electronics
MIL-S-12883B	Sockets and Accessories for Plug-in Electronic Components, General Specification for	Electronics
MIL-C-13777F	Cable, Special Purpose, Electrical, General Specifica- tion for	Ground fire control
MIL-C-13909B	Conduit, Metal, Flexible, Electrical, Shielded	Military vehicles
MIL-F-14256D	Flux, Soldering, Liquid	Soldering
MIL-F-15160E	Fuses, Instrument, Power and Telephone	Instruments, telephones

MIL-S-15291C	Switch, Rotary, Snap Action	Shipboard
MIL-T-15659G	Terminal, Lug, Solder and Phosphor Bronze	Heavy equipment
MIL-F-15743A	Switch, Rotary, Enclosed	Shipboard
MIL-M-16034A	Meter, Electrical, Indicating (Switchboard and Portable Types)	Shipboard
MIL-M-16125C	Meters, Electrical, Frequency	Shipboard
MIL-E-16366D	Electrical Clamp, Lug, and Conductor Splices - Pressure Grip	Shipboard
MIL-M-17275B	Meter, Electrical, Indicating, Direct Current	Field equipment
MIL-I-18079B	Installation of Angle of Attack and Sideslip Systems	Aircraft instruments
MIL-L-18276C	Lighting, Aircraft Interior, Installation of	Aircraft lighting subsystem
MIL-F-18327C	Filters, High Pass, Low Pass, Band Pass, Band Suppression, and Dual Functioning, General Specification for	Audio
MIL-A-19401	Actuator, Electromechanical, Rotary, For AS-473/ASB-1	Radar antenna
MIL-S-20708C	Synchros, General Specification for	Fire control
MIL-I-21557B	Insulation Sleeving, Electrical Flexible	Shipboard
MIL-S-21604B	Switch, Rotary, Multipole and Selector, 1 to 10 Ampere	Shipboard
MIL-F-21608D	Ferrule, Shield Terminating, Crimp Style	RF cables

MIL-C-21617	Connectors, Plug and Receptacle-Electrical, Rectangular, Polarized Shell, Miniature Type	Shipboard
MIL-L-21652A	Light, Beacon, Anticollision Aircraft, General Specification for	Aircraft lighting subsystem
MIL-C-22520D	Crimping Tools, Contact, Electric, Hand, General Specification for	Electrical tools
MIL-A-23282B	Actuator	Torpedo
MIL-F-23419B	Fuses, Instrument Type, General Specification for	Electronic instruments
MIL-F-23447	Fire Warning Systems, Aircraft, Radiation Sensing Type, Test and Installation of	Navy aircraft
MIL-I-24391A	Insulation Tape, Electrical, Plastic, Pressure-Sensitive	Shipboard
MIL-C-22520D	Crimping Tools, Contact, Electric, Hand, General Specification for	Tools
MIL-C-25050A	Colors, Aeronautical Lights and Lighting Equipment	Aircraft lighting
MIL-L-25467C	Lighting, Integral, Aircraft Instrument, General Specification for	Aircraft lighting
MIL-E-25366C	Electric and Electronic Equipment and Systems, Guided Missiles, General Specification for	Missiles
MIL-C-25955	Connectors, Electrical, Environment Resisting, Miniature, With Snap-In Contacts	Inactive for new design
MIL-F-26301C	Flashers, Position Light, Aircraft	Aircraft lighting subsystem

MIL-P-26333A	Panel, Protection, Electrical System, AC Generator System, General Requirements for	Inactive for new design
MIL-C-26500D	Connectors, General Purpose, Electrical, Miniature, Circular Environment Resisting, General Specification for	Inactive for new design
MIL-G-26611B	Generator Tachometer, GEU-7/A Miniature	Turbine RPM
MIL-C-26637	Connectors, Coaxial, Radio Frequency Series LT, General Specification for	Audio transmission
MIL-L-27160B	Lighting, Instrument, Integral, White, General Specification for	Instrument lighting
MIL-T-27493A	Transformer, Variable, Single Phase, 400 Cycles, General Specification for	Aircraft lighting subsystem
MIL-C-27699	Connector, Plug, Electrical Connector, Receptacle, Electrical (Heavy Duty, Waterproof)	Outdoor cables
MIL-M-38510A	Microcircuits, General Specification for	Electronic
MIL-C-39010B	Coils, Fixed, Radio Frequency, Molded, Established Reliability, General Specification for	Audio/RF circuits
MIL-C-39012B	Connectors, Coaxial, Radio-frequency, General Specification for	Audio circuits
MIL-T-39013A	Transformers and Inductors (Audio and Power), Established Reliability for	Electronic
MIL-C-39019A	Circuit Breakers, Magnetic, Low Power, Sealed, Trip-Free, General Specification for	Electronic

MIL-C-39020	Crystal Units, Quartz, Established Reliability, General Specification for	Electronic
MIL-F-39025	Filters, High Pass, Low Pass, Band Pass, Band Suppression, and Dual Functioning, Estab- lished Reliability, General Specification for	Audio circuit
MIL-G-45204B	Gold Plating, Electrodeposited	Corrosion prevention
MIL-E-45782B	Electrical Wiring, Procedures for	Missiles
MIL-I-46058C	Insulating Compound, Elec- trical (For Coating Printed Circuit Assemblies)	Nonaviation
MIL-C-55021B	Cables, Twisted Pairs and Triples, Internal Hookup, General Specification for	Electronic
MIL-P-55034A	Powered Magnetic Material, Molded, Stability of (For Cores Used in Electrical and Electronic Parts)	Army field equipment
MIL-C-55074D	Connector, Plug, Electrical U-185/G, Connector, Receptacle, Electrical U-186/G, Connector, Receptacle, Electrical U-187/G, Contact Assembly, Electrical, MX 3227/G	Military communications
MIL-C-55081B	Connector, Plug, Electrical, U-185/G, Connector, Plug Electrical, U-319/G, Connector, Receptacle, Electrical, U-121/G, Connector, Receptacle, Electrical, U-122/G	Field equipment
MIL-C-55116A	Connectors, Miniature Audio, Five Pin	Audio circuit
MIL-B-55118A	Batteries, Storage (Cells), Vented, Nickel-Cadmium	Ground equipment

MIL-B-55130	Batteries, Storage, Sealed, Nickel-Cadmium	Ground equipment
MIL-T-55155A	Terminals, Feed Thru (Insulated) and Terminals, Stud (Insulated and Non-insulated), General Specification for	Nonaviation
MIL-T-55156	Terminals, Lug, Splices, Conductor, Screw Type, General Specification for	Nonaviation
MIL-T-55164A	Terminal Board, Molded, Barrier, Screw and Stud Types, and Associated Accessories, General Specification for	Nonaviation
MIL-C-55181A	Connectors, Plug and Receptacle, Intermediate (Electrical, Waterproof), General Specification for	Electronic
MIL-C-55235	Connectors, Coaxial, Radio Frequency, Series TPS	Audio circuit
MIL-C-55302A	Connectors, Printed Circuit Subassembly and Accessories	Nonaviation
MIL-S-55433A	Switch Capsules, Dry Reed Type, General Specification for	Nonaviation
MIL-G-62075	Generator System, Alternator Rectifier 30/80 Amperes, 28 Volts	Ground vehicles
MIL-L-81174	Lights, Landing, Aircraft, Retractable	Aircraft lighting subsystem
MIL-I-81219A	Indicator, Elapsed Time, Electrochemical	Equipment operating time
MIL-P-81338	Power Supplies, Transistorized, Direct Current, Regulated, General Specification for	Electronic

MIL-C-81511C	Connectors, Electrical, Circular, High Density, Quick Disconnect, Environ- ment Resisting, and Acces- sories, General Specification for	Inactive for new design
MIL-P-81279	Power Supply, Miniature, General Specification for	Electronics
MIL-T-81768	Transformer-Rectifier TEK-9/A24B-4(V)	Nuclear weapons

**APPENDIX III**  
**RELATED REFERENCE DOCUMENTS**

The following documents were valuable as reference documents. They are applicable to processes, marking, packaging, and inspection procedures.

<u>DOCUMENT NUMBER</u>	<u>TITLE</u>	<u>PURPOSE</u>
MIL-P-116E	Preservation. Method of	Corrosion control
MIL-T-152B	Treatment, Moisture and Fungus-Resistant of Communications, Electronic, and Associated Electrical Equipment	Moisture and fungus treatment
MIL-V-173C	Varnish, Moisture, and Fungus Resistant (For Treatment of Communications, Electronic and Associated Equipment)	Moisture and fungus treatment
MIL-D-1000	Drawings, Engineering, and Associated Lists	Drawing requirements
MIL-M-3171C	Magnesium Alloy, Processes for Pretreatment and Prevention of Corrosion On	Corrosion control
MIL-S-5002C	Surface Treatments and Metallic Coatings for Metal Surfaces of Weapons Systems	Cleaning metal surfaces
MIL-P-6063A	Packaging of Batteries, Storage, Charged and Dry- Uncharged	Battery shipping
MIL-F-7179D	Finishes and Coatings, General Specification for	Aircraft finishes
MIL-I-8500B	Interchangeability and Replaceability of Component Parts for Aircraft (Including Guided Missiles)	Includes electrical system

MIL-H-8501A	Helicopter Flying and Ground Handling Qualities, General Requirements for	Design requirements
MIL-A-8625C	Anodic Coatings, for Aluminum and Aluminum Alloys	Corrosion protection
MIL-I-8700A	Installation and Test of Electronic Equipment in Aircraft, General Specification for	Improved electronics
MIL-D-8706B	Data and Test of Electronic Equipment in Aircraft, General Specification for	Electronic equipment
MIL-Q-9858A	Quality Program Requirements	Supplies and services
MIL-T-10727A	Tin-Plating, Electrodeposited or Hot-dipped, for Ferrous and Non-Ferrous Metals	Preparation for soldering
MIL-P-11268G	Parts, Materials, Processes Used in Electronic Equipment	Shopping list
MIL-C-11796B	Corrosion Preventative, Petrolatum, Hot Application	Corrosion control
MIL-C-12000F	Cable, Cord, and Wire, Electric; Packaging of	Shipment and storage
MIL-M-13232A	Marking of Electronic Items	Marking material
MIL-P-15024	Plates, Tags, and Bands for Identification of Equipment	Includes electrical
MIL-E-16298	Electric Machines Having Rotating Parts, Packaging of	Shipment and storage
MIL-E-17555G	Electronic and Electrical Equipment, Accessories, and Repair Parts; Packaging and Packing of	Treatment, marking, shipping, and storage
MIL-M-18012B	Markings for Aircrew Station Displays and Configuration of	Letters, numerals

MIL-N-18307D (NAVY)	Nomenclature for Electronic, Aeronautical, and Aeronautical Support Equipment, Including Ground Support Equipment	Navy ground support
MIL-A-19531	Aircraft Maintenance and Engineering Inspection	Navy aircraft
MIL-STD-22256 (AER)	Reliability Requirements for Design of Electronic Equipment or Systems	Navy aircraft
MIL-C-22751D	Coating System, Epoxy-Polyimide, Chemical and Solvent Resistant, Process for Application of	Aircraft paint
MIL-R-22973	Reliability Index Determination for Avionics Equipment Models, General Specification for	Avionics models
MIL-R-38100B (USAF)	Reliability and Quality Assurance Requirements for Established Reliability Parts, General Specification for	Air Force R&M
MIL-I-45208A	Inspection System Requirements	Contractor procedure
MIL-C-45662A	Calibration System Requirements	Standardized calibration
MIL-S-45743C	Soldering, Manual Type, High Reliability Connections for Missile Systems, Procedures for	Missile wiring
MIL-H-46855A	Human Engineering Requirements for Military Systems, Equipment and Facilities	All military systems
MIL-Q-50301 (MU)	Quality Control System, Requirements for	Technical data
MIL-S-55556 (EL)	Specification, Preparation, Installation, and Acceptance of Electronics Equipment in Aircraft	Army aircraft

MIL-I-63026	Manual, Technical, for Army Aircraft	Aeronautical maintenance
MIL-I-81023B	Inductor, 28V D.C. Laboratory Test, General Specification for	Laboratory test
MIL-M-81260	Manual, Technical, Aircraft Maintenance	Navy aircraft
MIL-M-81531	Marking of Electrical Insulating Materials	Marking performance

## APPENDIX IV DOCUMENT ANALYSIS

This appendix provides the analysis of the electrical system documentation. The documents are divided into 8 major classifications.

- Electrical System Documents, Figure 31
- Alternating Current Circuit Documents, Figure 32
- Battery Circuit Documents, Figure 33
- Electrical Controls Circuit Documents, Figure 34
- External Power Circuit Documents, Figure 35
- Direct Current Circuit Documents, Figure 36
- Load Circuit Documents, Figure 37
- Electrical System Component Part Documents, Figure 38

The analysis is presented in columnar format; the columnar headings used in this analysis are as follows:

Generic Classification — Generic classification of item controlled by the document.

Document Number — Military specification or standard number assigned to the document, document title, all active revisions, amendments, and supplements and the dates of each.

Deficiency — Abbreviated deficiency terms are presented in this column. Abbreviated terms are used in Figures 31 through 38 for the purpose of brevity. A short description of these reliability/maintainability related deficiencies are as follows:

1. Performance. The document is devoid of requirements for the component to meet or exceed the performance requirements established by the mission profile.
2. Design. The document references other documents for the design requirements. This is considered inadequate.
3. Environmental Conditions. The document either does not address environmental conditions which are normally encountered by military helicopters, or merely implies the mission design requirements by stating performance or physical test values in nonspecific terms.

4. Interchangeability. The document is devoid of a requirement for similar assemblies, subassemblies, and replaceable parts to be interchangeable.
5. Standard Components. The document is devoid of a requirement to use standard components that consider the specific mission profile requirements.
6. Product Identification. The document is devoid of identifying features, i.e., nameplates or markings which identify the item governed by the specification.
7. Workmanship. The document is devoid of a workmanship requirement, or a standard is merely implied.
8. Safety. The document is devoid of safety requirements for personnel and equipment.
9. Reliability Program. The document is devoid of reliability program requirements that consider the mission require requirements.
10. Maintainability Program. The document is devoid of maintainability program requirements that consider the mission requirements.
11. Electromagnetic Interference. The document is devoid of electromagnetic interference requirements for electrical components.
12. Human Engineering. The document is devoid of human engineering requirements.
13. Environmental Testing. The document is either devoid of environmental testing requirements or the requirements stated are not in consonance with MIL-STD-810 and/or MIL-STD-202.
14. Qualification Test Plan. The document does not require qualification testing or the test plan requirements are ambiguous.
15. Test Witness. The document does not require that a designated test witness be appointed to observe critical tests.
16. Rejection and Retest. The document is either devoid of definitive qualification retesting procedures, or implies retesting in case of quality conformance test failures.

17. Reliability Demonstration. The document does not require a reliability demonstration or implies reliability by quantitative "life" testing.
18. Maintainability Demonstration. The document is devoid of a maintainability demonstration requirement.
19. Quality Assurance Program. The document is devoid of a quality assurance program or existing provisions are stated in ambiguous terms.
20. Component Sampling. The document is either devoid of qualification test sampling, or implies this function by requiring quality conformance sampling.
21. Packing and Shipping. The document is devoid of requirements for packing and shipping.
22. Mandatory Inspection Points. The document is devoid of requirements for in-process inspection points.

GENERIC CLASSIFICATION	DOCUMENT NUMBER, TITLE, REVISION, AMENDMENT, SUPPLEMENT AND DATES	DEFICIENCY	POTENTIAL RELIABILITY/MAINTAINABILITY IMPACT
Electrical System	MIL-STD-704A Electrical Power, Aircraft, Characteristics and Utilization of Change 2, dated 9 August 1966	General: No deficiencies were noted which would have impact on reliability or maintainability.	Insignificant
	MIL-B-5087B (ASG) Bonding, Electrical, and Lightning Protection for Aerospace Systems Amendment 2, dated 31 August 1970	Design Requirements: <ul style="list-style-type: none"> <li>● Workmanship</li> <li>● Human Engineering</li> </ul>	Significant Significant
	MIL-W-5088E Wiring, Aircraft, Selection and Installation of Revised 28 March 1972	Design Requirements: <ul style="list-style-type: none"> <li>● Environmental Conditions</li> <li>● Safety</li> <li>● Human Engineering</li> </ul> Testing: <ul style="list-style-type: none"> <li>● Reliability Demonstration</li> <li>● Maintainability Demonstration</li> <li>● Environmental Testing</li> </ul>	Significant Significant Significant
