12. **PROTOCOL OUTCOME SUMMARY:** (Please provide, in "ABSTRACT" format, a summary of the protocol objectives, materials and methods, results - include tables/figures, and conclusions/applications.)

The purpose of this course is to familiarize PGY-3 Oral and Maxillofacial Surgery Residents with basic principles of microvascular surgery. At the conclusion of the course, the participant will be better suited to assist/perform basic techniques required in nerve and vessel reanastomosis. Over a 4 day period, the participant will learn via both didactic and hands-on experience. Using a rat model, the participant will learn to utilize basic microsurgical techniques and become familiar with the instrumentation. Hands on skill set will develop to further assist the resident in actual human patient procedures. The OMS microvascular course is an essential part of the contemporary Oral and Maxillofacial Surgery resident training. The course will provide the basic skills needed to perform and assist in human surgeries.
