FOREWORD

This two-part bibliography features books and periodical articles written on the subject of desert operations. These relate to warfare. Historically, military forces literally burned themselves out in desert expanses while enroute to some built-up area objective. Technology has, of course, tended to off-set any such former advantage in the modern sense. Still, it is suggested, there are advantages in having read the lessons of past conflicts.

This bibliography is arranged in two parts. Part one covers books. Part two features periodicals. An arbitrarily devised acronym should aid in the cause of brevity. Inclusion of an item, or omission, does not imply USAFAS indorsement or sanction of the compiler's point-of-view nor does it guarantee accuracy of content. Comment and criticism concerning this list is solicited.
