Subject: *Technical* Report on Contract
F49620-84-C-0078

Dear Joe,

Enclosed are six copies of our annual report covering August and September 1984. Provisional results for the Ni-Cr-Si, Ni-Al-Si, $\text{NiO}_2\text{-SiO}_2$ and $\text{Cr}_2\text{O}_3\text{-SiO}_2$ are enclosed. I expect to be in Washington on 19, 20 November 1984 and would like to see you if you are available.

Best Regards,

Larry Kaufman

LK/cg

Approved for public release;
distribution unlimited.

18. SUPPLEMENTARY NOTES		
19. KEY WORDS (Continue on reverse side if necessary and identify by block number)		
20. ABSTRACT (Continue on reverse side if necessary and identify by block number) Computer Coupled Phase Diagram and Thermochemical Data have been used to calculate the NiO-SiO ₂ and Cr ₂ O ₃ -SiO ₂ Phase Diagrams and isothermal sections in the Ni-Si-Al and Ni-Cr-Si systems between 700K and 1500K.		

I PROGRESS DURING THE CURRENT YEAR

The methods developed under the previous Contract F49620-80-C-0020 and described in the final report on that contract dated 30 November 1983 entitled "Computer Based Methods for Thermodynamics Analysis of Materials Processing" by Larry Kaufman are to be employed to carry out the following tasks during the first year of the current program:

1. A combined thermochemical and phase diagram analysis will be performed for the $\text{GeO}_2 - \text{HfO}_2$, $\text{GeO}_2 - \text{TiO}_2$, $\text{GeO}_2 - \text{Al}_2\text{O}_3$, $\text{GeO}_2 - \text{MgO}$, $\text{GeO}_2 - \text{SiO}_2$, $\text{GeO}_2 - \text{CaO}$, $\text{SiO}_2 - \text{NiO}$ and $\text{SiO}_2 - \text{Cr}_2\text{O}_3$ quasi-binary systems in order to define the lattice stability, solution and compound phase parameters and expand the current data base.
2. Isothermal sections in the $\text{GeO}_2 - \text{MgO} - \text{SiO}_2$, $\text{GeO}_2 - \text{MgO} - \text{TiO}_2$, $\text{GeO}_2 - \text{CaO} - \text{MgO}$ systems will be calculated between 700K and 2700K and isothermal sections in the Ni - Cr - Si and Ni - Al - Si systems will be calculated between 700 and 1500K. The calculated phase diagrams will be compared with available experimental phase diagrams to test the data base.

During the first two months of the program the $\text{SiO}_2 - \text{Cr}_2\text{O}_3$ and $\text{SiO}_2 - \text{NiO}$ quasi binary system have been analysed and ternary sections in the Ni-Cr-Al and Ni-Al-Si systems have been calculated. Figures 1-12 show the present (provisional) results of this work.

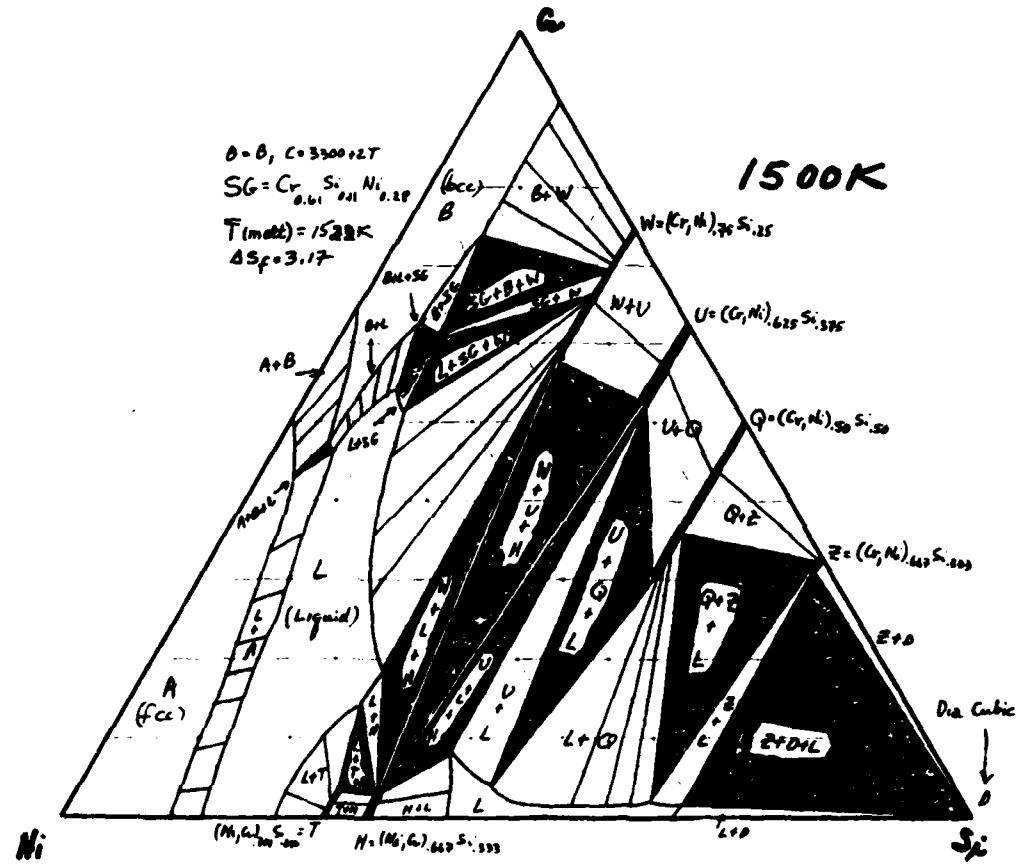

Figure 1 Calculated Isothermal Section in the Cr-Si-Ni System at 1500K

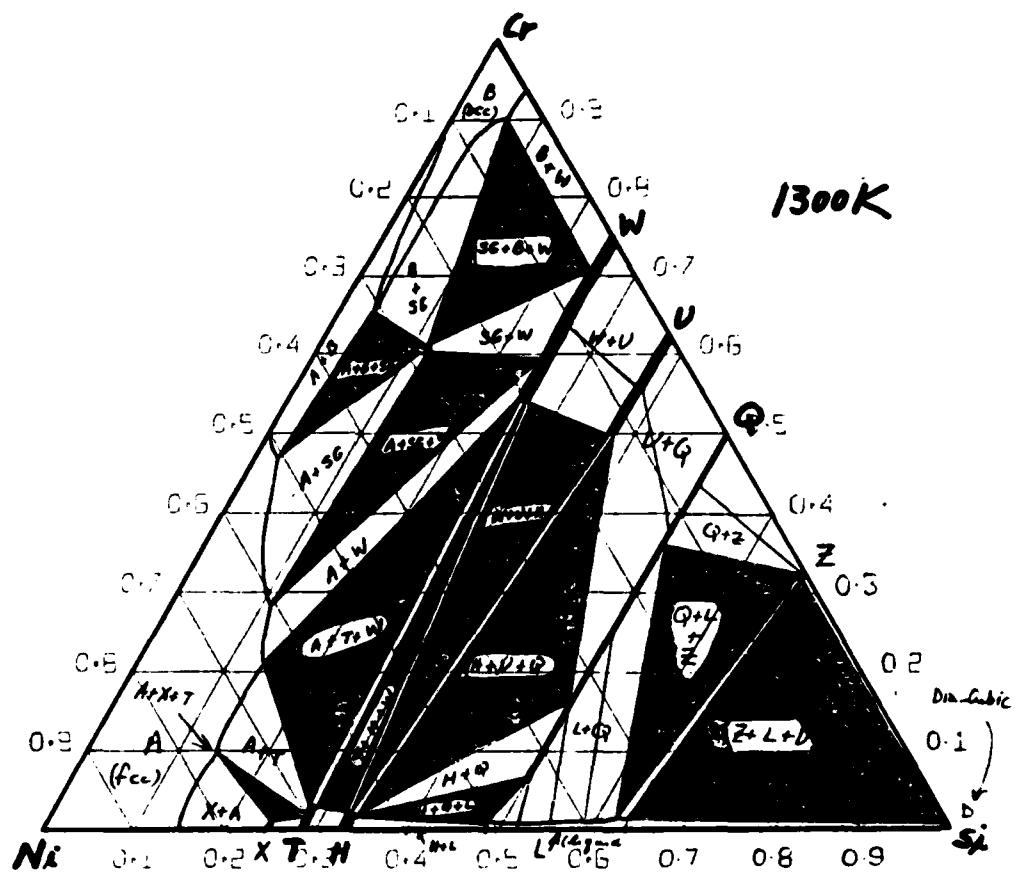

Figure 2 Calculated Isothermal Section in the Cr-Si-Ni System at 1300K

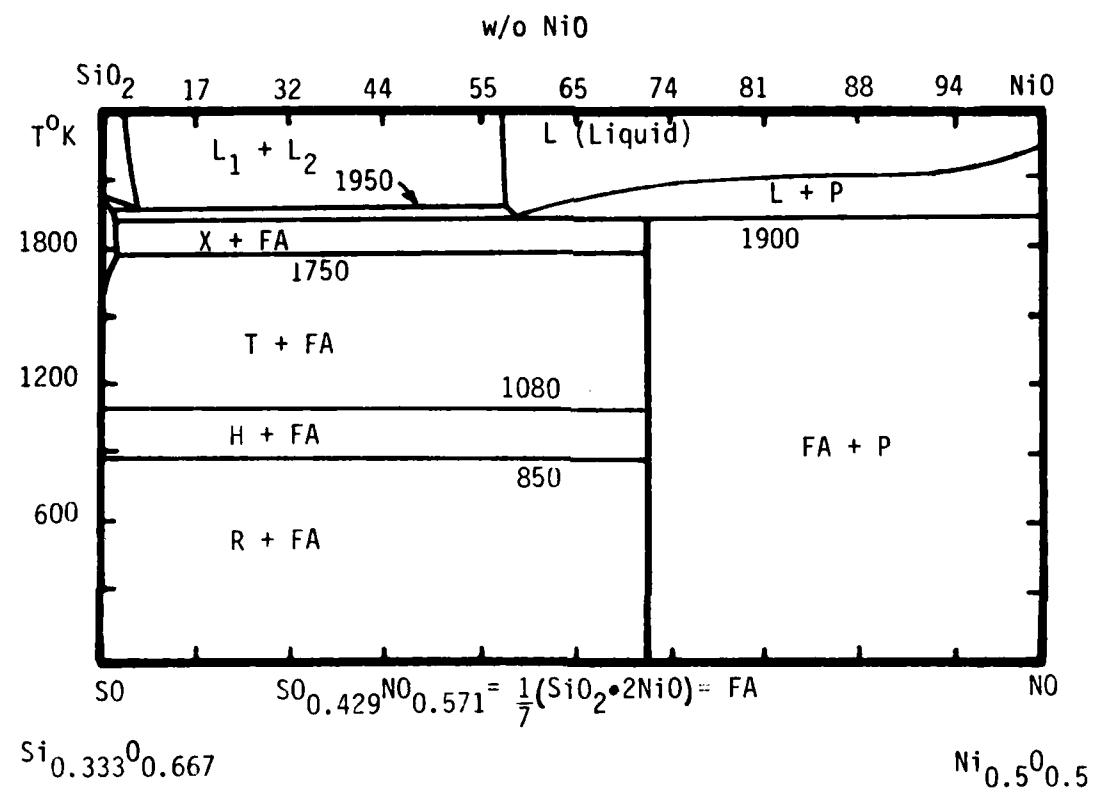

Figure 12 Calculated $\text{Si}_{0.333}\text{Ni}_{0.667} - \text{Ni}_{0.5}\text{O}_{0.5}$ Phase Diagram

II PROGRAM PERSONNEL

Technical activities during the past two months have been carried out by L. Kaufman, D. Birnie, J. Pershan, E.P. Warekois, J. Smith and D. Hay.
