# Life Cycle Management Automation Programmer's Manual

by  
Don Kermath  
Yung Pan  
Jui-tine Lee  
Gonzalo Perez

Life Cycle Management Automation is a micro-computer system to manage the Army Reserve Inventory of Facilities through their entire life cycle, from acquisition to disposal. The system is made up of several computer programs, all of which access a common database.

The programs included in the LCM are: UNIT, FACILITY, AMSA, BACKLOG, ProjDoc, MINOR, and REAL ESTATE. The programs UNIT, FACILITY, and AMSA collect the basic data used by BACKLOG, ProjDoc, MINOR, and REAL ESTATE. BACKLOG generates the 5-year plan. ProjDoc produces Military Construction, Army Reserve (MCAR) project documentation in minutes. MINOR manages the Minor Construction Program. REAL ESTATE manages the Real Estate Program.

LCM requires no special computer training. It runs on IBM-compatible computers with at least 420K memory, PC DOS 3.1 or higher, 1 floppy disk drive, 8 to 15 megabytes of free hard disk space for the program, and a printer with a 12-character per inch capability.

## CHAPTER 1: INTRODUCTION

### 1.1 BACKGROUND

The purpose of LCM Software is to provide a computer program that will help manage MCAR project life cycle. The basis for the program is a set of data files containing extensive information on USAR facilities and USAR units. These data files are created from information already available to the user. Corrections, changes, and additions are then made by the user to support production of reports.

No special computer training is required to use LCM software. The programs are designed to provide maximum user friendliness.

The benefits and advantages of LCM software are many. Currently the production of reports is a difficult, protracted, stubby pencil drill. Any revisions to a project require total recalculation of project information and total reproduction of the reports by hand. LCM software replaces the stubby pencil, producing needed reports in minutes.

Revisions to projects are simple. LCM software will almost instantaneously recalculate the data and reproduce updated reports.

The ability of LCM software to handle changes results in an extremely valuable by-product of the program. It allows the manager to judge the impact of varied scheduling, stationing, and/or construction options.

### 1.2 OBJECTIVE

1.2.1 Purpose of Program Maintenance Manual. The objective for writing this Program Maintenance manual for LCM software is to provide the maintenance programmer personnel with the information necessary to effectively maintain the system. The system refers to LCM automation software as of 01 OCT 89.

1.2.2 Project References. The program was developed under contract from the USACERL (United States Army Construction Engineering Research Lab), Champaign, Illinois, for OCAR (Office of the Chief, Army Reserve), HQDA [DAAR] (Headquarters, Department of the Army).

1.2.3 Standards or Reference Documentation.

- a. Project Documentation User's Guide, Office of the Chief, Army Reserve, Construction Management Division, undated.
- b. ProjDoc User's Manual, U.S. Army Construction Engineering Research Laboratory, FS Division, MPA Team, dated July 1988.
- c. Military Construction Program (Justification Data Submitted to Congress), FY 1989, "Green Book," Department of the Army, United States Army Reserve, dated February 1988.

- d. AR 140-478, Army Reserve Facilities, Projects and Programs, Headquarters, Department of the Army, dated 13 June 1986.
- e. AR 140-485, Army Reserve Space Guidelines, U.S. Army Reserve Facilities, Headquarters, Department of the Army, dated 26 March 1986.
- f. DOD-STD-7935, Department of Defense (DoD) Standard, Automated Data Systems (ADS) Documentation, DoD, dated 15 February 1983.

- r. Pkarc, Pkware, Inc. version 3.5

1.2.4 Terms and Abbreviations. See Appendix A for a list of terms, definitions, acronyms, and abbreviations unique to this document and/or subject to interpretation by the user.

1.2.5 Security. The program is UNCLASSIFIED as is the information contained in the completed data files. No extraordinary security measures are required. However normal precautions should be taken to safeguard the stored information and prevent unauthorized access to or destruction of the program and data.

### 1.3 APPROACH

MCAR automation is an integrated microcomputer system in which all subsystems are accessing the same database. To ensure maximum understanding of the whole system, we first illustrate the whole functional system overview to explain how the system is functioned, what each subsystem is doing, and how these subsystems are interrelated. Next, the database structure and design process are presented. Finally, each subsystem programs are explained by using program flow diagrams. The generation and compilation of program codes are also explained.

#### 1.4 MODE OF TECHNOLOGY TRANSFER

The program and documentation for the LCM Automation will be available from Construction Management Division, Office of the Chief, Army Reserve.

## CHAPTER 2: FUNCTIONAL SYSTEM DESCRIPTION

### 2.1 OVERVIEW

Life Cycle Management Automation is a microcomputer system intended to support DAAR-CM officers in managing the Army Reserve Inventory of Facilities through their entire life cycle, from acquisition to disposal. The system is made up of several computer programs, all of which access a common database. Each program supports a different managerial requirement in the facility life cycle. The relationship among the different programs and the database is shown in Figure 2.1.

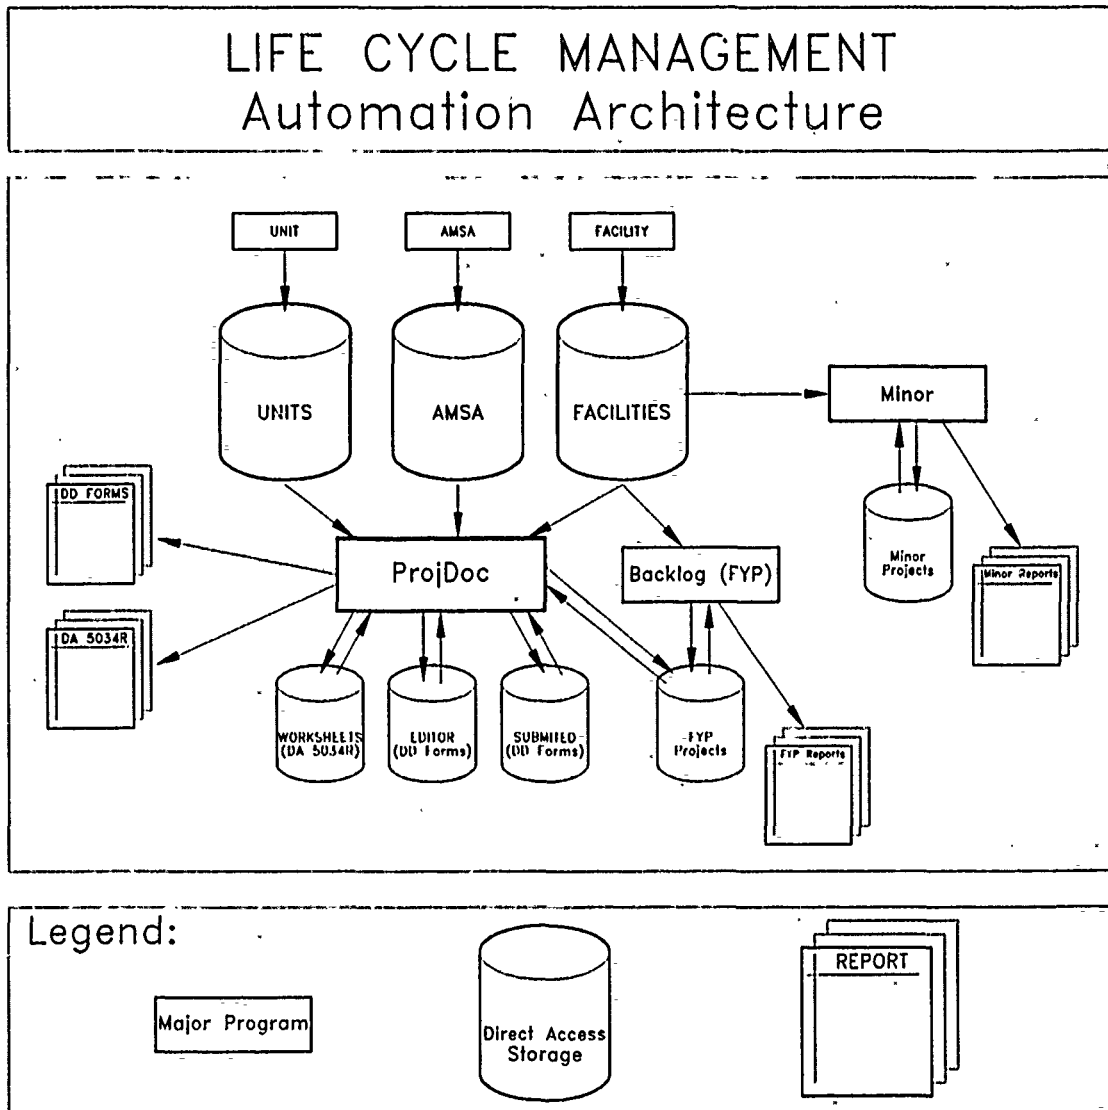

Figure 2.1

The programs included in the LCM system are: UNIT, FACILITY, AMSA, Backlog, ProjDoc, MINOR, and REAL ESTATE. The programs UNIT, FACILITY, and AMSA collect the basic data to be used by Backlog, ProjDoc, MINOR, and Real Estate. The integrated design of the LCM system makes data collection a one time effort from which the rest of the programs start. In addition, LCM Software also includes a few utilities to help operate and maintain the database.

The objective of UNIT is to gather and maintain a data inventory of U.S. Army Reserve Units to be used by the other LCM programs. The collection of unit data is done only once, and after that the program is only used to maintain the data. An explanation of how to use UNIT is found in Chapter 3 of this manual.

The objective of FACILITY is to gather and maintain a data inventory of U.S. Army Reserve facilities to be used by the other LCM programs. The collection of facilities data is done only once, and after that the program is only used to maintain the data. A description of FACILITY can be found in Chapter 3 of this manual.

The objective of AMSA is to gather and maintain a data inventory of Area Maintenance Support Activities (AMSA) to be used by the other LCM programs. The collection of AMSA data is done only once, and after that the program is only used to maintain the data. A description of AMSA is found in Chapter 3 of this manual.

The purpose of Backlog is to generate the 5-year plan as described in Army Regulation AR 140-478. A description of Backlog can be found in Chapter 4 of this manual.

The purpose of ProjDoc is to produce Military Construction Army Reserve (MCAR) project documents which are incorporated into the Military Construction Program, United States Army, Green Book. Army Regulations AR 140-478 and AR 140-485 describe the different forms and procedures required to document a project. A description of ProjDoc is found in Chapter 5 of this manual.

The purpose of MINOR is to manage the Minor Construction Program as described in the Army Regulations 140-478. A description of the program is found in Chapter 6 of this manual.

Chapter 7 provides a description of the different utilities used by LCM Automation system.

## 2.2 HARDWARE CONFIGURATION

LCM runs on IBM compatible computers with at least 420K of available system memory, PC DOS 3.X, 1 floppy disk drive, 8-15 megabytes of free hard disk for the programs, system files and databases, and a printer with 12-character per inch capability.

High quality printing is available on an HP LaserJet+ with a Prestige Elite 12cpi font cartridge and HP Softfonts (AC). With the laser printer it is possible to print 1390 and 1391 forms with border and form information with the data.

## 2.3 SOFTWARE LIST

Figure 2.2 13 shows the list of software used in developing the LCM system. Software titles are trademarks of the manufactures listed below.

---

**LCM Software Requirement List**

---

<u>Manufacturer</u>	<u>Software</u>	<u>Version</u>	<u>Function</u>
WordPerfect	WordPerfect	5.1	Word processing for writing documentation and editing memo fields.
Wall Soft	Documenter	1.27b	Document Quicksilver programs and data.
Wall Soft	UI Programmer	2.0	Create and edit template files and data dictionary.
WordTech	dBXL	1.3	Quicksilver program interpreter.
WordTech	QuickSilver	1.3	Compilation manager which prepares a list of programs which need to be compiled. Generates object code.
Pocket Soft	RTLink	2.03	Dynamic linker and overlay manager of object code. Uses run time library to reduce overall program size on disk.
Phoenix	PLink86	2.20	Dynamic linker and overlay manager of object code.
Hewlett-Packard	HP Softfonts	(AC)	Fonts used in 1390 and 1391 forms.
	Automenu		LCM main menu system.
Concentric Data Systems	R&R Report Writer	3B	dBXL database report generator.
Rick Hansen	QSPRO	11-88	QuickSilver compilation manager.
Pkware, Inc.	Pkarc	3.5	File archive utility.

---

Figure 2.2

## 2.4 DATABASE DESIGN

LCM database is a relational database. Figure 2.3. shows the entity relationship diagram.

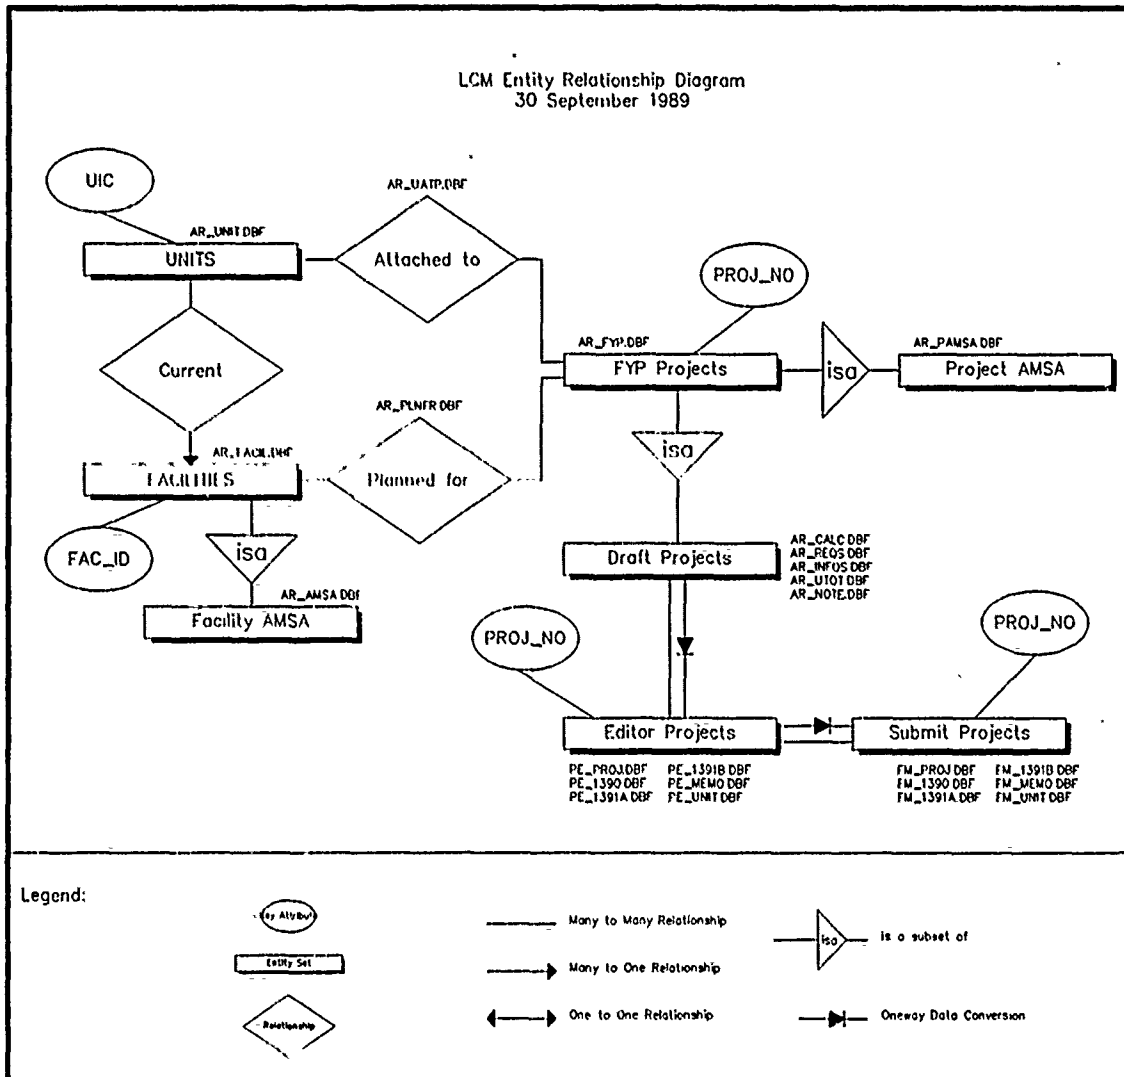

Figure 2.3

U.S. Army Unit inventory data is entered from UNIT subsystem. Data is stored in ar\_unit.dbf which includes UIC (unit ID code, key field), CUR\_FAC (which facility is the unit currently located), and other unit information.

Similarly, facility inventory data is entered from FACILITY subsystem. Data is stored in ar\_facil.dbf which includes FAC\_ID (facility ID, key field) and other facility information.

Some facilities include an AMSA. For these facilities, facility data is first entered from FACILITY, then AMSA data is entered from AMSA subsystem. AMSA data is stored in ar\_amsa.dbf which includes FAC\_ID (facility ID, key field) and other AMSA information.

UNIT, FACILITY, and AMSA are the inventory collection phase of the whole LCM automation system. They form the bases of project creation and documentation preparation.

Projects can be created from BACKLOG or ProjDoc. Basic project data is stored in ar\_fyp.dbf, and the key field is PROJ\_NO (project number). Since each project is using one facility and some units, two other files are also needed to keep track of these relationships. One is ar\_plnfr.dbf in which the relation between project and facility is stored. The other is ar\_uatp.dbf in which the relation between project and units is stored. If a project is also an AMSA project, its AMSA requirement data is stored in ar\_pamsa.dbf.

Project documentation is created from ProjDoc subsystem. Draft project documents are prepared to calculate authorized space and enter user required space. The data is kept in ar\_calc.dbf, ar\_reqs.dbf, ar\_infos.dbf, ar\_utot.dbf, and ar\_note.dbf. When preparing for DD Form 1390 and 1391, this editor project data is stored in pe\_proj.dbf, pe\_1390.dbf, pe\_1391A.dbf, pe\_1391B.dbf, pe\_memo.dbf, and pe\_unit.dbf. Finally, submit project data is stored in fm\_proj.dbf, fm\_1390.dbf, fm\_1391A.dbf, fm\_1391B.dbf, fm\_memo.dbf, and fm\_unit.dbf.

Minor construction programs are created from MINOR subsystem and its data is stored in ar\_minor.dbf.

Consult the data dictionary in Appendix B for detail database information.

## 2.5 DESIGN PROCESS

In designing LCM system, the first step is to create the database structure. For each file, key field is selected for identifying records, index is created for fast search, and relationship between files is created for linking files together. These database files can be created from DBXL or UI Programmer.

Next, all of these database files are put into data dictionary by using UI Programmer. The name of our data dictionary is MCar.DIC. The data dictionary serves not only as a reference of database files but also as a base for designing data entry windows and writing templates for programs.

After data dictionary is built, we begin to design programs. In the LCM automation system, some programs have similar structure. The only difference is that they access different database files and the data entry windows are different. Therefore, different windows are designed for each program but a common template is written and used by all of them. Then, by selecting a window and this template, we can generate these programs. All of these processes are done through UI Programmer. A list of windows and templates used by each program can be found in Chapter 2.

However, for those programs that either do not need data entry windows or are very unique, we wrote their codes directly by any kind of editor, such as Applied Systems Technologies' QEdit, instead of writing UI Programmer template to generate them.

Next, programs are compiled using QuickSilver and linked using RTlink or Plink86.

Finally, Automenu is used to generate various menus in LCM system so that all of the subsystems are integrated together.

In the procedure of documenting, WordPerfect is used for writing manuals. Documenter, dFlow, and dAnalyst are used for analyzing DBXL programs.

## 2.6 LCM AUTOMATION MENU SYSTEM

Automenu is used to tie all the executable files together. Each call to a program is a separate executable file. The individual programs, such as pd.exe, maintain their own menus with overlays. The following sub-paragraphs contain the automenu menus and the .mdf files that are used to create them.

2.6.4 LCM Reports Menu. This option has not been implemented yet.

## 2.7 UI PROGRAMMER VERSION TWO (UI2)

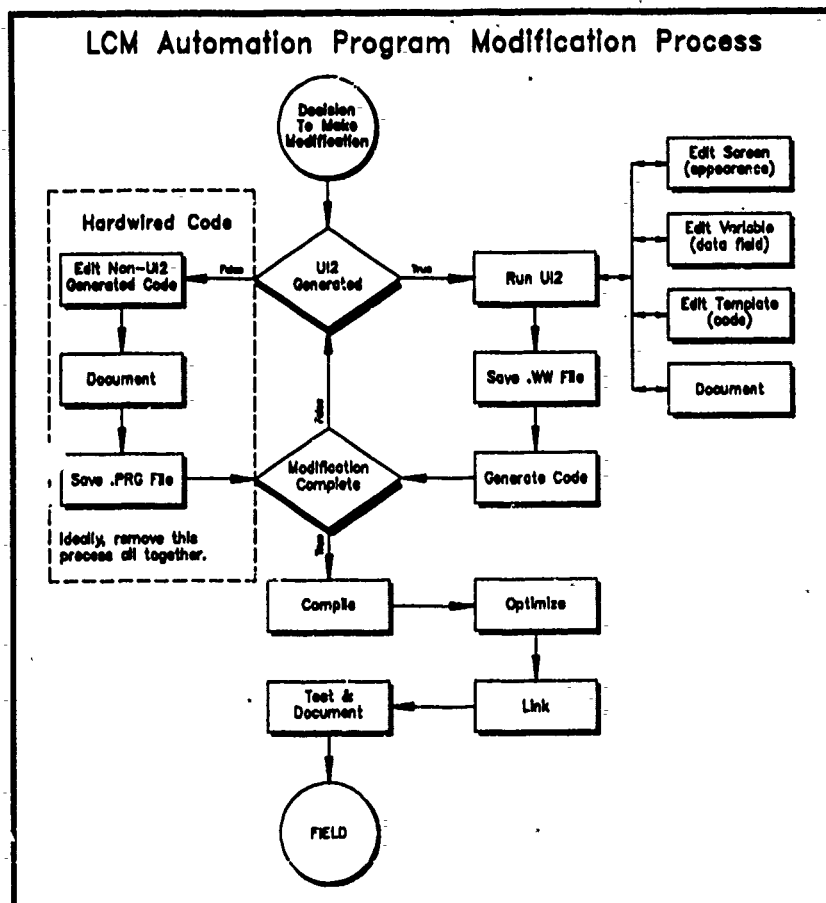

2.7.1 What is UI2? UI Programmer Version Two (UI2) is a multi-lingual applications generator. UI2 is capable of maintaining database structures and documentation through its integrated data dictionary. The developer can paint screens and reports with database field pick-and-place capability from the data dictionary. An entire system from input screens to documentation can be maintained within UI2.

2.7.2 UI2 Memory Usage. When using UI2, the UI2 program is first loaded into memory. This uses about 350K memory space. Then the data dictionary is attached if it will be referenced by a .ww

form or a .prg program. The memory needed for loading a data dictionary is greater than the size of data dictionary because of some internal overhead. Therefore, adequate available memory space must be assured before using UI2.

**2.7.3 UI2 Background.** The LCM Automation software began with traditional coding methods (hardwired code). With the advent of UI2 code generating software it was decided to implement UI2 in the LCM Automation design process. However, thousands of lines of code had already been written in the traditional method. The decision was made to use UI2 for all new code and to redo all screen handling code with UI2. Time limitations have prevented the converting of all traditional code to UI2 format. It is recommended that all existing code that was generated without UI2 be converted to UI2 format to facilitate programming management. All new code generated for the LCM Automation system should incorporate the use of UI2.

Figure 2.7 illustrates the LCM Automation programming modification process. A modification is any change to the system whether it entails changing an existing feature or adding an entirely new element. Only modifications to existing hardwired code should be modified in the traditional method. All other features (e.g., database structure, screens, variables) should be added or modified using UI2.

#### 2.7.4 Slot Usage.

There are three slots in data dictionary and .wv forms. They are extra variable attributes and can be used for any purpose. In the MCAR data dictionary, database slot 2 is used for the name of the key field of the database. For each field, slot 1 is used as the owner of the field (e.g., OCAR, FORSCOM, or C) while slot 2 is used only when it is the key field. In the .wv form, slot 1 is used for the help message while slot 2 displays example variable contents.

#### 2.8 COMPILING, OPTIMIZING AND LINKING

Figure 2.7

The LCM system contains 8 programs, which are PD, AMSA, FACILITY, UNIT, IE\_FACIL, IE\_PROJ, IE\_UNIT, and UTILITY. There are many ways to set up the directory structure. However,

if the dependencies of each program and the efficiency of hard disk space usage are considered, the following directory structure is recommended.

Figure 2.8

DI is the directory which consists of all .prg files and object code files of three programs, AMSA, FACILITY, and UNIT. IE\_PORT is the directory which consists of all .prg files and object code files of three programs for import and export, IE\_FACIL, IE\_PROJ, IE\_UNIT, and UTILITY. UIPRG is the directory which consists of all .prg files of the program PD. (NOTE that each program consists of several .prg files.) @ is the directory which consists of object code files for each prg file of PD. The last one, EXE, is the directory which consists of all executable files of LCM system. The directories of .ww, .dic, .tem, .tlb, .dbf and .ndx files will be described later.

The RAM disk plays an important role in compiling and linking. For example, if you have 6M RAM disk when you compile program PD, you will save almost one third to one half of the time because a lot of I/O is needed during compiling and linking. For a different size of RAM disk, different compiling and linking batch files are recommended.

QSPRO is one of several commands used in batch files. QSPRO analyzes the program and generates a list of .prg files which were updated after the last compilation. A lot of time is saved because the unnecessary compilations are avoided through program analysis. QSPRO creates a compiler list file called qspro.lst. The usage of QSPRO is shown in Figure 2.9.

```

Usage: qsprio [-g] [-f] [-v] [-y] [-z] <top program name>

OPTIONS:
-g          : Compile For Debugger
-f          : Drop First Character
-v          : Display NO Line Count
-y          : Turn Direct Video Off
-z          : Turn Snow Detection ON
  
```

Figure 2.9

Next, DB3C is a compiler which compiles a .prg file into object code(d-code) file. The usage of DB3C is shown in Figure 2.10.

```
Usage : db3c [-a] [-c] [-dx] [-f] [-g] [-o] [-p] [-v] [-w] [-\] filelist | -file

OPTIONS :
-a          : Automatic Compilation
-c          : Check syntax only
-d<drive>  : Write object-code file(s) on specified drive
-f          : Drop first character of filename
-o          : To support ON <command> and REPLY
-p          : No keyboard input
-v          : Line count not displayed
-w          : No warning on trivial errors
-\         : Do not compile *\ command lines
-g          : Compile for debugger
```

Figure 2.10

DB3L is a d-code linker which links the d-code files produced by DB3C into a executable file and a .ovl file. It also creates a .dbc file which can be processed further to speed up the execution. DO NOT confuse the process of linking d-code, which is linked by DB3L, with the process of linking assembly code, which is linked by PLINK86 (described later). The executable file produced by PLINK86 is much faster than the executable file produced by DB3L. The usage of DB3L is shown in Figure 2.11.

```
Usage: db3l [-d<dir>] [-f] [-g] [-l<lib>] [-o<dir>] [-q] [-w] filelist | -file ...

OPTIONS :
-d<path>   : Write .DBC overlay file to specified drive\directory
-f         : Root filenames's first character was dropped
-g         : Link for debugger
-l<[path]library> : Use specified linker library, DEFAULT : DB3PCL.LIB
-o<path>   : Write .EXE, .OVL, and install files to specified
drive\directory
-q         : Generate .DBC file only, DEFAULT : .EXE, .OVL, .DBC
-w         : Suppress warning on trivial errors
```

Figure 2.11

QS is an assembly code translator which translates a .dbc (d-code) file into .obj (assembly code) files. The usage of QS is shown in Figure 2.12.

```
Usage: qs [-@F] [-3] [-cO] [-g] [-lX] [-m#] [-n#] [-oF] [-p] [-s] [-vF] [-dP] <.DBC>

OPTIONS :
-@<file>  : <file> specifies obj modules and libraries
-3        : Generates .LNK file for MS-Linker 3.xx, DEFAULT: 2.xx
-c<obj>   : Specifies obj modules and libraries
-g        : OPTIMIZEs, LINKs and GOEs
-l<x>     : Calls linker <x>.exe to obtain EXE file, DEFAULT: LINK.EXE
-m<#, #, #> : Specifies memory variable allocation
           : DEFAULT: character variables: 6K; Date, numeric, and logical
           : variables:
           : 3K; Array definitions: 1K
-n<#, #>  : Specifies the number of memory/edit variables
           : DEFAULT: memory variables: 256; edit variables: 128
-o<file>  : Specifies output file name, DEFAULT: <DBCFILe>.OBJ
-p        : Generates .LNK file for PLINK86, DEFAULT: for MS-Linker
-s        : Generates .LNK file for QS MS-DOS, DEFAULT: PC-DOS
-v<file>  : Generates files for overlay structures specified in <file>
-d<path>  : Specifies the path for QS libraries, DEFAULT: current
directory
-x        : Generates the error dump, DEFAULT: none
```

Figure 2.12

Finally, PLINK86 is an assembly-code linker which links .obj files into executable files. PLINK86 creates an overlay system, defined by the programmer with QS .spc file, which makes the program PD work in limited memory space.

In the following batch files, assume that the hard disk is in C: drive and the RAM disk is in D: drive. First, the case without utilizing a RAM disk is shown.

## 2.8.1 No RAM disk usage

### 2.8.1.1 Compile, optimize and link PD

```
cd \mcar\pd\uiprg
qspiro -f pd
db3c -f -o -w -qspiro.lst
db3c -f -o -w udfs
copy *.prg \mcar\pd\@
del *.prg
cd \mcar\pd\@
db31 -f -w -q -d\mcar\pd\exe pd udfs
cd \mcar\pd\exe
qs -p -vpd.apc pd
plink86 @pd.lnk
del *.obj
```

### 2.8.1.2 Compile, optimize and link AMSA, FACILITY, and UNIT

```
rem ***** COMPILE AND LINK AMSA *****

del pd?.ovl
del pd.dbc
del *.obj

```

The batch files for compiling and linking the other programs are the same as above.

## 2.9 PROGRAM GENERATION

As mentioned above, each program contains several .prg files. Actually, each .prg file is a procedure coded with dBXL language which is quite similar to dBASE III. .ww file is a screen file used by UI2 and .tem file is a template file used by UI2. Besides .ww and .tem files, UI2 needs .dic and .tlb files to generate a .prg file. .dic file is a dictionary file which contains all field names used in the database and the description of those field names. .tlb file is a template library file. The directory structure of .ww, .dic, .tem and .tlb files will be described later. Therefore, a .prg file may be related to a .ww file and a .tem file. The relationship between .prg files and .ww and .tem files is shown in Figure 2.13 below.

Figure 2.15

Basically, you can put .ww files and .tem files in any directory you like, but the following directory structure is recommended.

Figure 2.16

The directory TEM contains all .tem and .tlb files. The directory WW contains all .ww and .dic files. The directory DBF contains all .dbf, .ndx and .dbt files associated with the finished program.

## 2.10 ON-SITE INSTALLATION

2.10.1 **Install Batch Files.** The LCM system contains 10 floppy disks of 360K; it can be installed by using the command "install <drive:>". For example, you want to install LCM system in C: drive. Key in "install C:". The LCM system will be installed in C:\MCAR and the empty database will be installed in C:\MCAR\DBF. The installation step will be described below. The first step is to put DISK 1 in Drive A: and key in "install C:", the screen will look like Figure 2.17.

Figure 2.17

After you press a key, the files in this floppy disk will be copied to your hard disk. Then follow the message which appears on screen. For example, after DISK 1 is copied to your hard disk, the screen will look like Figure 2.18.

Figure 2.18

Similarly, follow the messages which appear on screen to install the other floppy disks. After the 10 floppy disks are copied into your hard disk, the screen will look like Figure 2.19.

        pe_memo.dbf
```

Figure 2.22

**NOTE:** 1. Before the files listed above are copied into floppy disks, all files are archived by the command PKARC. To conveniently install, self-extraction is provided by a batch file, SELFARC.BAT. The content of SELFARC.BAT is shown in Figure 2.23.

```
COPY /B pksEx.pgm + %1.arc %2.exe
```

**Figure 2.23**

2. There are four laser font files, HV060RPN.USB, HV080IPN.USB, HV100RPN.USB and HV120BPN.USB which can not be sent with the program. Each user must purchase these fonts from HP SOFTFONT (AC). After you get these fonts, put them in the directory, \MCAR\EXE. These fonts are used to print out DD forms on HP LASERJET+(or better).

## CHAPTER 3: DATA ENTRY - UNIT, FACILITY, & AMSA

### 3.1 OVERVIEW

The purpose of UNIT, FACILITY, and AMSA is to let users enter data inventory into the database before they can be used by Backlog, ProjDoc, and other programs.

The unit data entered goes into ar\_unit.dbf in which UIC is the key field to identify each record in the file. Furthermore, the index file is created based on the key field to facilitate fast search. In the unit program, unit.prg is the main program which first calls environ.prg to set up program environment and initialize some global variables and then calls di\_unitx.prg for four unit data entry screens. In each of the data entry screens, users can search one specific unit's data by entering the UIC. The function of di\_unsch.prg is called by each id\_unit?.prg to facilitate this purpose.

The facility data entered goes into ar\_facil.dbf in which FAC\_ID is the key field to identify each record in the file. Furthermore, the index file is created based on the key field to facilitate fast searches. In the facility program, facility.prg is the main program which first calls environ.prg to set up program environment and initialize some global variables and then calls di\_facx.prg for five data entry screens. Each of them can call di\_fsch.prg to search facility data by entering facility search criteria attributes.

AMSA is a special kind of facility. Users should first use FACILITY to enter its common facility data and then use AMSA to enter other specific AMSA data. The AMSA data entered goes into ar\_amsa.dbf in which FAC\_ID is the key field and this FAC\_ID should be the FAC\_ID generated by FACILITY program. In the AMSA program, amsa.prg is the main program which first calls environ.prg to set up program environment and initialize some global variable and then calls di\_amsax.prg for 1 data entry screen. The data entry program, di\_amsa1.prg, can call di\_fsch.prg to search facility data too.

### 3.2 FUNCTIONAL DESCRIPTION

3.2.1 List of Program .PRG Files. Figure 3.1 shows the list of prg files used in the three programs.

List of PRG files

UNIT	FACILITY	AMSA
unit.prg	facility.prg	amsa.prg

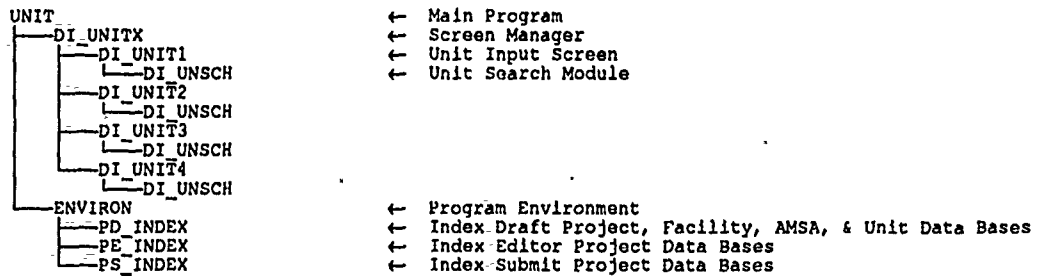

Figure 3.2

Figure 3.3 shows the system tree diagram for FACILITY.PRG.

Figure 3.3

Figure 3.4 shows the system tree diagram for AMSA.PRG.

Figure 3.4

3.2.3 QS Optimizer Overlay Specification. Figure 3.5 shows the overlay structure used when linking programs to optimize available memory space. The use of overlays for these three programs is more an exercise in consistency and optimization than necessity. These programs are relatively small compared to ProjDoc and Backlog which have to utilize overlays in order to operate in the 640K DOS environment.

Each of these .spc files will be used to generate a link instruction file when used in conjunction with QS.EXE, the optimizer. Refer to QuickSilver manual for overlay specification file format requirements. The chapter on ProjDoc lists an example link (.lnk) file.

## CHAPTER 5: ProjDoc

### 5.1 OVERVIEW

**5.1.1 Functional Overview.** The purpose of ProjDoc is to create MCAR project documents for a given MCAR project, from U.S. Army Reserve facility data compiled by the users, along with text written by the user to support the project. The draft documents are used as a model for the finished documents which are bound together for each fiscal year to make up the FY USAR "Green Book." The FY USAR "Green Book" is then submitted to Congress to support the MCAR portion of the Defense Department Budget.

In ProjDoc main menu, there are five options (Figure 5.1). PROJECTS is to initialize a draft project. WORKSHEETS is to calculate authorized facility space requirements and enter data into DA 5034R worksheet, information worksheet, and furniture worksheet. DD FORMS is to edit Green Book documents including editor projects and submit projects. OUTPUT is to print out project documents. UTILITIES is some utility programs. Each of these functions will be further explained separately in subsequent sections.

Figure 5.1

**5.1.2 Database Structure.** To support this project document preparation process, ProjDoc divides its database files into three categories. One is for draft projects, another is for editor projects, and the other is for submit projects. Database files in each category are further divided into sub-files based on the characteristics of fields in order to speed up data access time and avoid the size of files growing too big. Figure 5.2 lists database files in these three project categories:

List Of Database Files In Each Project Category

Draft Project	Editor Project	Submit Project
ar_fyp.dbf	pe_proj.dbf	fm_proj.dbf
ar_plnfr.dbf	pe_unit.dbf	fm_unit.dbf

ar_infos.dbf		
ar_utot.dbf		
ar_note.dbf		

Figure 5.2

5.2 FUNCTIONAL DESCRIPTION

5.2.1 Flow Diagram. Like other programs in MCAR LCM Automation, ProjDoc is composed of several programs. At its highest level, pd.prg is the main program which first calls environ.prg to set up environment and initialize global variables. Then it calls signon.prg to display ProjDoc signon screen. Last, it calls pd\_bar.prg to invoke ProjDoc main menu. The five options in main menu are then called from pd\_bar.prg based on the users selection. Pd\_p.prg, pd\_w.prg, pd\_d.prg, pd\_o.prg, and pd\_u.prg are the programs for these five options. Figure 5.3 illustrates this highest level program structure.

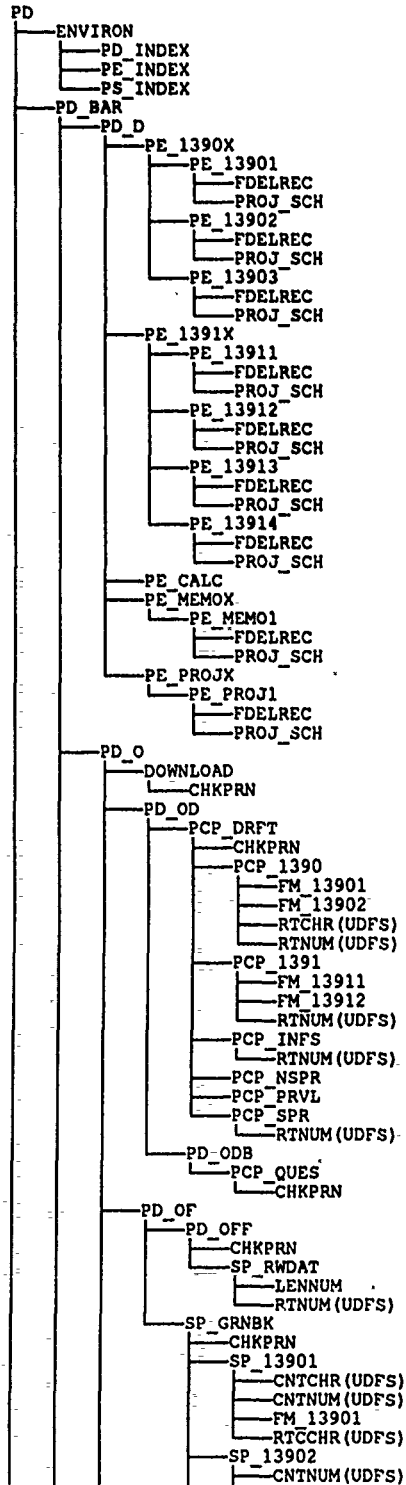

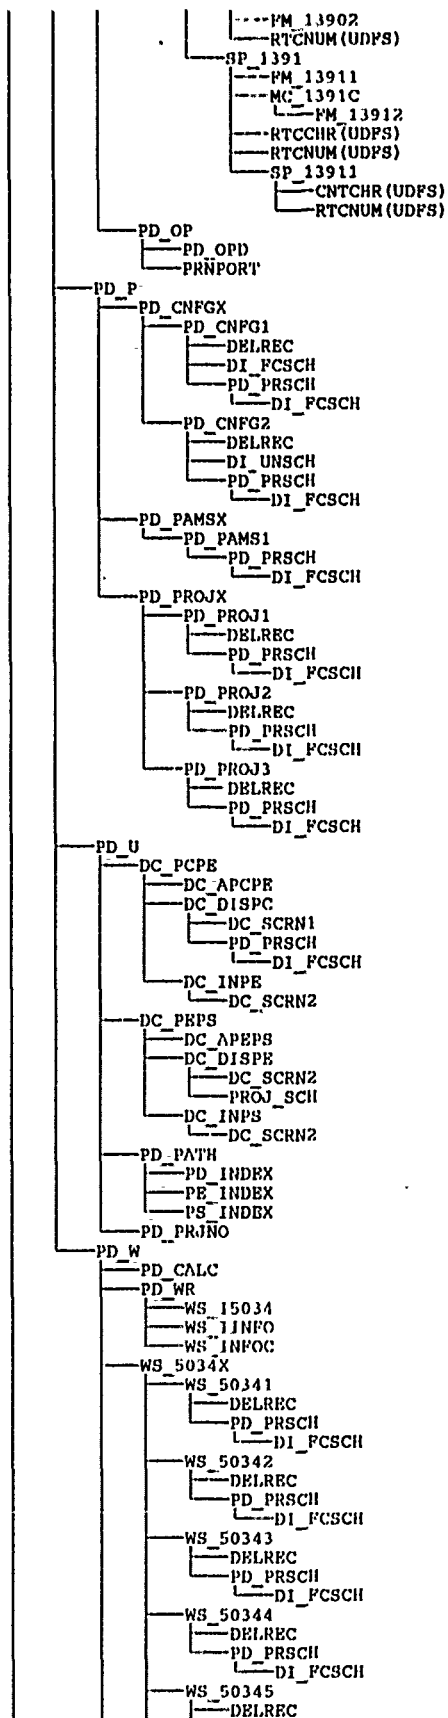

Figure 5.3

5.2.2 Program Structure. Each of these five sub-programs then, in turn, calls its sub-programs to implement different functions that will be discussed later. Figure 5.4 displays the overall program flow diagram of ProjDoc. All of the routines called in Figure 5.4 are maintained in separate prg files on disk. All of the routines followed by (UDFS) are quicksilver user defined functions and are maintained in a file called udfs.prg.

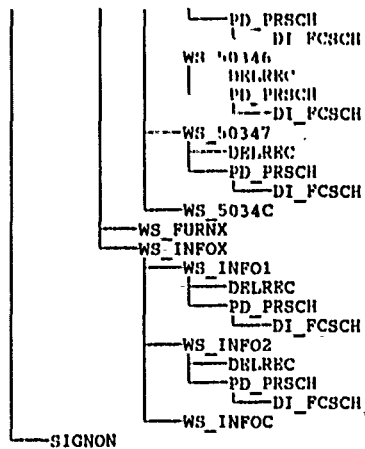

Figure 5.4

**5.2.3 Menu Structure.** The first menu displayed is called a bar menu, because the options are arranged from left to right, side-by-side, resembling a bar. Once a bar menu option is selected, you will see a pull-down menu. We call it this because it pulls down from the bar menu. This is also known as another level in the menu.

This menu structure is generated from UI2 and its file name is pd.ww. The first window in this file is **signon** which displays the signon message. The next window is **bar** which is the bar menu. There are five options in the bar menu: **project**, **worksheet**, **DD forms**, **output**, and **utilities**. The windows for these options are: **p**, **w**, **d**, **o**, and **u**. They are named by their highlighted key letter.

The sub-menus under these pull-down menus are handled similarly except that the window name of previous level menu is prefixed to become their full name. In **project**, **DD forms**, and **utilities**, there are no sub-menus. In **worksheet**, the only sub-menu is under the option of **replace** and its name is **wr**. In **output**, the sub-menus are **od**, **of**, and **op**. They are under the options of **draft**, **final**, and **printer** respectively. Again the window names for basic project data of **draft**, **final document data** of **final**, and **device of printer** are **odb**, **off**, and **opd** respectively.

**5.2.4 QS Optimizer Overlay Specification.** Since ProjDoc is composed of so many program modules, they cannot be put into main memory at the same time. Figure 5.5 illustrates the quicksilver overlay specification file called pd.spc. Pd.spc is used in conjunction with the quicksilver optimizer to create a plink86 linking overlay instruction file called pd.lnk as shown in Figure 5.6.

### 5.3 PROJECTS

**5.3.1 Overall Structure.** Projects is used to initialize a draft project. In its sub-menu, there are three options: CONFIGURE, BASIC INFO, and AMSA INFO. As to the program structure, pd\_p.prg is the main program which calls pd\_cnfgx.prg, pd\_projx.prg, and pd\_pamsx.prg to invoke these three options. Figure 5.7 illustrates this program structure. Note that all of the screen manager files (e.g., pd\_cnfgx, pd\_projx, ...) are denoted with an "x" at the end of the file name. All screens managed by the screen manager (e.g., pd\_cnfgx) have the same file name but end with the screen number (e.g., pd\_cnfg1, pd\_cnfg2). This feature facilitates future modification to the number of input screens for each screen manager.

Figure 5.7

**5.3.2 CONFIGURE.** In CONFIGURE users can edit, delete, or add projects. There are two screens under this program. The first screen is essentially for project and facility information while the second screen is for the project and units information.

Each project has its own unique project number. Once users enter the project number, the program will search ar\_fyp.dbf to see whether it is already there. If not, users can add the new project and then specify which facility and units are used for that project. The program will also search ar\_facil.dbf and ar\_unit.dbf for the facility and units data, respectively. If they are not there, users will be asked whether they want to create a new facility (or unit). Although new facility or unit data can be added at this time, all information entered at this time is only the facility ID or UIC. Users still have to use FACILITY and UNIT to enter other information before project can use them for documentation preparation.

The added new project data will be put into ar\_fyp.dbf. In addition, the relation data between the project and the facility will go into ar\_plnfr.dbf and the relation data between the project and the units will go into ar\_uatp.dbf.

As to the program structure, pd\_cnfgx.prg is the main program which calls pd\_cnfg1.prg for the first screen process and pd\_cnfg2.prg for the second screen process. Pd\_cnfg1.prg calls delrec.prg to delete project data, di\_fsch.prg to search facility data, and pd\_prsch.prg to search project data.

Pd\_prsch.prg also calls di\_fsch.prg to search facility data. The structure for pd\_cfg2.prg is similar except that it calls di\_unsch to search units data. Figure 5.8 illustrates this program structure.

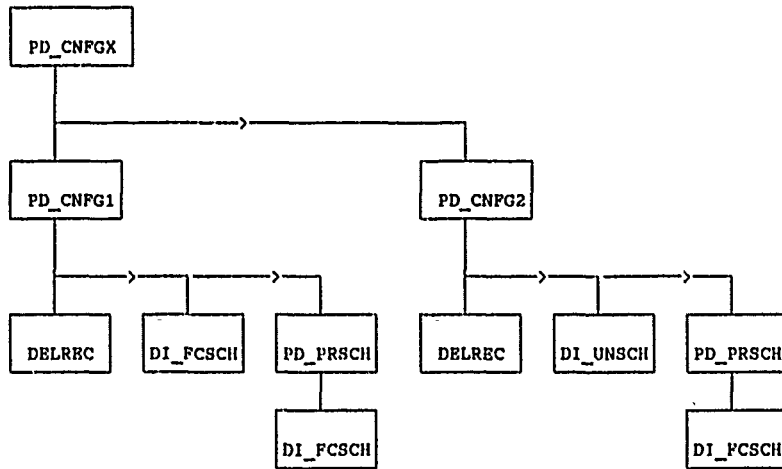

Figure 5.8

5.3.3 BASIC INFO. Basic Information is to let users enter pertinent information about the project. The information needed will be displayed on three different screens. Therefore, pd\_projx.prg is the main program of this option and it calls pd\_proj1.prg, pd\_proj2.prg and pd\_proj3.prg to invoke these three screens. The program structure for these three programs is quite similar. They first display the associated screen and then let users search, edit, or delete project information. Delrec.prg deletes projects and pd\_prsch.prg searches for projects which in turn calls di\_fsch.prg to search facility data. Figure 5.9 illustrates this program structure.

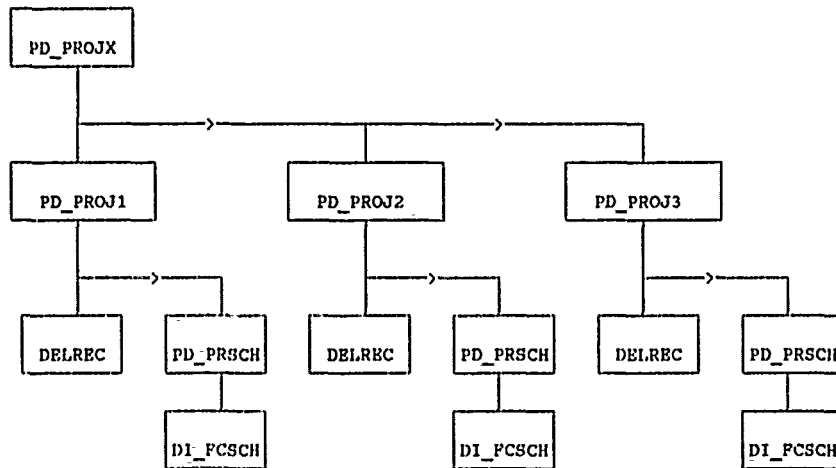

Figure 5.9

5.3.4 AMSA INFO. This function is to let users enter pertinent information to those projects which include an AMSA. There is only one screen; therefore, the program structure is quite simple. Pd\_pamsx.prg is the main program which calls pd\_pams1.prg to display this screen. Pd\_pams1.prg in

turn calls pd\_prsch.prg to search project data and then pd\_prsch.prg calls di\_fcscch.prg to search facility data. The information entered goes into ar\_pamsa.dbf database file. Figure 5.10 illustrates this program structure.

Figure 5.10

## 5.4 WORKSHEETS

**5.4.1 Overall Structure.** Once a project is initialized, the next step is to use ProjDoc Worksheets to determine project scope. In WORKSHEETS, there are five options. First, users may select CALCULATE to let the program automatically calculate authorized space allocation based on Army Regulation 140-485. Then they can select DA 5034R, INFO SYSTEM, or FURNITURE to specify their own requirements. Since most project requirements are based on the Army Regulation 140-458, ProjDoc has an option to replace all of the approved requirements with those generated with the calculate option. Then the user may modify individual approved requirements on a case-by-case basis. The purpose of manually replacing approved requirements is to prevent automatic overwriting of previously modified data.

For this menu system, pd\_w.prg is the main program which is a pull down sub-menu to invoke its five options based on user selection. ws\_5034x.prg, ws\_infox.prg, ws\_furnx.prg, pd\_wr.prg, and pd\_calc.prg are these five sub-programs. Figure 5.11 shows the program structure for this menu.

Figure 5.11

**5.4.2 DA 5034R.** There are seven screens for the DA Form 5034R Worksheets. The layout of each screen is quite similar. It is divided into five columns: Space, Regulation, Approved, Existing, and Justify. Space column lists the individual building areas. Regulation column shows the amount of space allowed based on Army Regulation 140-485. Approved column is where you will enter the

amount of space that you need as approved by your headquarters. Existing column shows the total of the areas in each section. Justify column contains memo fields for justification. The data entered will go into ar\_calc.dbf and ar\_note.dbf.

Once this option is selected, ws\_5034x.prg will be invoked to access related database files, then the first screen will be displayed. Other screens will be displayed if PgUp or PgDn is pressed. Ws\_50341.prg to ws\_50347.prg are the sub-programs to display these seven screens and ws\_5034c.prg is the sub-program to calculate some worksheet subtotal and put them into appropriate database files. Figure 5.12 shows this program structure.

Figure 5.12

5.4.3 INFO SYS. This program works in the same manner as that of DA 5034R worksheet except that it has only two screens. Ws\_infox.prg is the main program which calls ws\_info1.prg to display first screen, ws\_info2.prg to display second screen, and ws\_infoc.prg to do some calculation. Figure 5.13 shows this program structure.

Figure 5.13

5.4.4 FURNITURE. This program has not been implemented yet.

5.4.5 REPLACE. This program will replace the data in the approved column of worksheet with the data in regulation column. Pd\_wr.prg is the pull down menu which calls ws\_i5034.prg to replace DA 5034R worksheet and ws\_iinfo.prg to replace information system worksheet. Figure 5.14 shows the program structure for this menu.

Figure 5.14

**5.4.6 CALCULATE.** The basis for using the Worksheets is that ProjDoc will calculate the data needed according to the Army Regulation 140-485. This calculation is not automatic and users must ask ProjDoc to do it whenever project input data is changed. This task is done by program `pd_calc.prg`. This program is written according to the Army Regulation 140-485. Programmers or maintainers should consult it for further detail.

## 5.5 DD FORMS

**5.5.1 Overall Structure.** The third step in the ProjDoc project documentation process is DD FORMS. Now the users have to supply ProjDoc with the rest of the information which will go onto the FY USAR Green Book Forms or DD Forms. Before entering the DD Forms information, users must enter the Utilities menu and choose the **Draft->Editor** option to convert the project from the draft database to the editor database. The information needed for the forms is distributed in five options: Title Info, DD 1390s, DD 1391, Memos, and Calculate. Each represents a particular group of information. `Pd_d.prg` is the main program to invoke these five options. Figure 5.15 shows this program structure.

Figure 5.15

**5.5.2 TITLE INFO.** This option lets users enter the information basic to all of the DD Forms. After that, ProjDoc will fill in all of the appropriate places on the forms. There is only one screen in this option. `Pe_projx.prg` is the screen manager which calls `pe_proj1.prg` to display the first screen. The delete and search functions in this screen are further implemented by `fdelrec.prg` and `proj_sch.prg` routines. Figure 5.16 shows this program structure.

Figure 5.16

**5.5.3 DD 1390S.** This option lets users fill out the information for the DD Form 1390s page 1 and 2 that will be placed into the FY USAR Green Book document. There are three screens for this option. The program structure is quite similar to that of **TITLE INFO** and is illustrated in Figure 5.17.

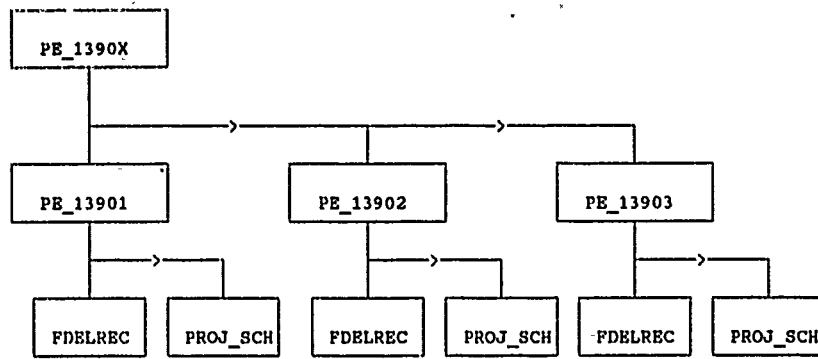

Figure 5.17

5.5.4 DD 1391. This option lets users fill out the information for the DD Form 1391 and DD Form 1391c that will be placed into the FY USAR Green Book document. There are four screens for this option. The program structure is quite similar to that of TITLE INFO and is illustrated in Figure 5.18.

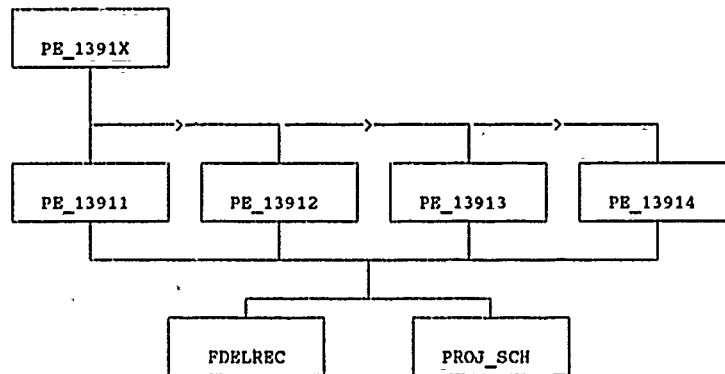

Figure 5.18

5.5.5 MEMOS. This option lets users fill out the memos that will be attached to the DD Forms. There is only one screen for this option. The program structure is quite similar to that of TITLE INFO and is illustrated in Figure 5.19.

Figure 5.19

5.5.6 CALCULATE. This program does the calculation routines for DD Forms. Pe\_calc.prg is the only program.

## 5.6 OUTPUT

5.6.1 Overall Structure. The final step in ProjDoc is to print out information to hard copy forms. There are four options for this menu: Draft, Final, Printer, and Softfont. Pd\_o.prg is the pull down menu which contains these four options to let users create the actual documents. Pd\_od.prg, pd\_of.prg, pd\_op.prg, and download.prg are the four programs implementing these options. Figure 5.20 shows this program structure.

Figure 5.20

5.6.2 DRAFT. There are several different options under this menu. Pd\_od.prg is the menu driven program. If users select any option other than **Basic Project Data**, it will call pcp\_drft.prg to print out appropriate forms. Otherwise, it will call pd\_odb.prg to let users select whether the output goes to screen or printer. Then pcp\_ques.prg is invoked for the output.

Based on users' selection, pcp\_drft.prg will call different routines to print out appropriate form. Chkprn.prg is the utility to check printer status. If printer is not on, it will display an error message on the screen. Pcp\_1390.prg, pcp\_1391.prg, pcp\_spr.prg, pcp\_nspr.prg, pcp\_infs.prg, and pcp\_prvl.prg are called to print out DD Forms 1390s, DD Forms 1391 & 1391c, DA Form 5034R, Notes for 5034R, Information System, and Project Validation, respectively. The program structure is shown in Figure 5.21.

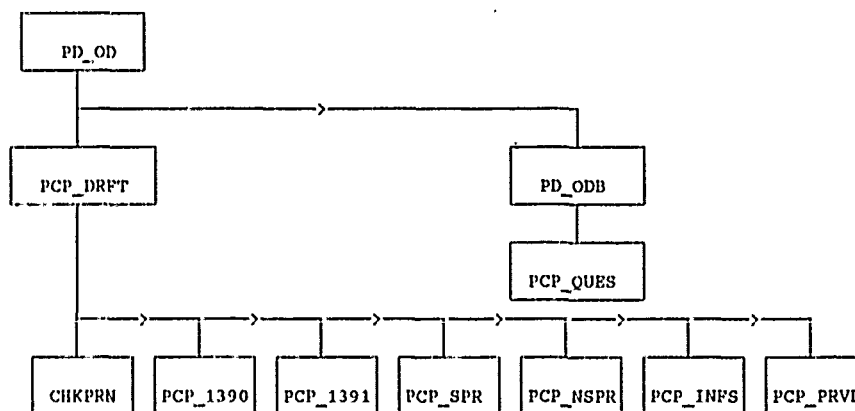

Figure 5.21

**5.6.3 FINAL.** The program structure is quite similar to that of Draft. If users select any option other than Final Document Data, pd\_of.prg will call sp\_gmbk.prg to print out appropriate forms. Otherwise, it will call pd\_off.prg to print final document data.

Based on users' selection, sp\_gmbk.prg will call sp\_13901.prg, sp\_13902.prg, or sp\_1391.prg to print out DD 1390s\1, DD 1390s\2, or DD 1391 & 1391c, respectively. The program structure is shown in Figure 5.22.

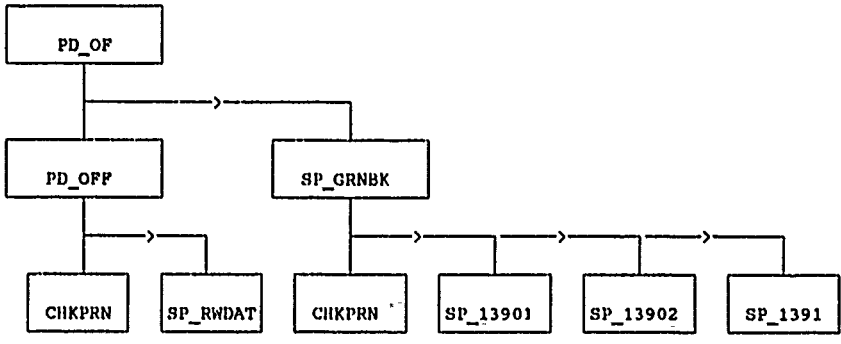

Figure 5.22

**5.6.4 PRINTER.** Pd\_op.prg is the menu program to let users select changing printer devices or ports. Pd\_opd.prg is the program to change printer devices while prnport.prg is the program to change printer ports. The program structure is shown in Figure 5.23.

Figure 5.23

**5.6.5 SOFTFONT.** This option lets users download the printer softfont. Download.prg is the main program which calls chkprn.prg to check printer status. If printer is not on, it will display an error message on the screen.

Figure 5.24

**5.7 UTILITIES**

**5.7.1 Overall Structure.** The utilities menu contains functions to make ProjDoc easy to use. There are five options: Draft->Editor, Submit Proj, Project #, Files, and Type. Pd\_u.prg is the pull down menu. Dc\_pcpe.prg is the program to convert a project from draft database to editor database. Dc\_peps.prg is the program to convert a project from the editor database to the submit database. Pd\_prjno.prg is to change a project number. Pd\_path.prg is to tell ProjDoc where the databases are located. Figure 5.25 shows this program structure.

Figure 5.25

**5.7.2 DRAFT -> EDIT.** This option lets the user convert the project from the draft database to the editor database. Before the conversion, draft project information will first display on the screen to ask the user whether to convert this project. This is done by dc\_dispc.prg. If the user answers no, he can fill in some project and/or facility information to search for the project. This is done by pd\_prsch.prg and de\_fcsc.h. Then the target project information will be shown on the screen to ask for confirmation (done by dc\_inpe.prg). Finally, dc\_apcpe.prg will be called to do the actual conversion. The program structure is shown in Figure 5.26.

Figure 5.26

**5.7.3 EDIT -> SUBMIT.** The program structure is quite similar to that of Draft->Editor except that it converts project from the editor database to the submit database. The program structure is shown in Figure 5.27.

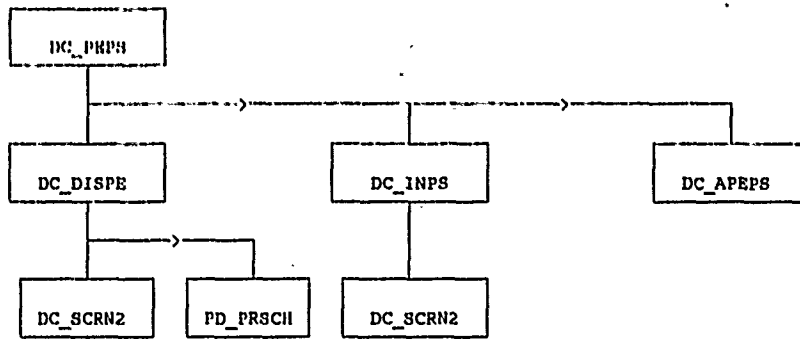

Figure 5.27

**5.7.4 PROJECT #.** This option is done by `pd_prjno.prg`. It seeks the whole databases for the project number and then replaces it with the new number.

**5.7.5 FILES.** `Pd_path.prg` is the main program asking users for the location of the databases. Then it calls three sub-programs to set index for the databases. The program structure is shown in Figure 5.28.

Figure 5.28

**5.7.6 TYPE.** This option lets the user change database type as used in DD Forms menu and the Output menu. Since only a few program statements need to call this option, it is included in `pd_u.prg`.

## CHAPTER 6: MINOR CONSTRUCTION PROJECTS

### 6.1 OVERVIEW

The MINOR computer program is a database of Military Construction Army Reserve (MCAR) minor construction projects. Its primary purpose is to manage the minor construction program. The program can easily generate several different reports. It is designed to use data from the Facility database (AR\_FACIL) in order to eliminate duplicate data.

### 6.2 FUNCTIONAL DESCRIPTION

This program can be used as a stand alone program, or run on a Local Area Network (LAN). Approximately 420,000 Bytes of free RAM are required to load this program. The program will automatically use 64,000 Bytes of expanded memory, if available.

Once installed, just type MINOR from the \MCAR subdirectory to start the program. The first time you run the program a window will appear asking you for the drive letter of your RAM disk. (This is the electronic disk drive that has been set up on your computer.) Most of the systems were set up with the "G" drive as the RAM disk, but you may designate any drive as your RAM drive. Just press <Esc> if you do not have a RAM drive. Next you will see a flashing "Indexing" message. The projects are being placed in the proper order (by priority, etc.) for the first time. After indexing, the introduction screen will appear. The program will automatically continue to the main menu.

To execute any menu selection, either highlight the selection using the arrow keys and press <Return>, or press the first letter (or number) of the menu selection. This program is very easy to use if you remember two important points. Whenever a window displays on the screen, read the information and/or instructions in the window. Then, always read the instructions or messages in the box at the bottom of the screen. You will always be asked what to do next, or you will be informed of what is going on in those two locations.

At the main menu you have four selections: Projects, Reports, Utilities and Quit to DOS.

#### 6.3 <P>rojects:

The <P>rojects selection will display all available information about each individual project. When first selected, you will see the first project in the database. The first project displayed will vary depending upon how the database is sorted. To "scroll" through the database, press the <Down Arrow> key to display the next project, or the <Up Arrow> key to display the previous project.

Pressing the <Right Arrow>, <Left Arrow>, or <Spacebar> will move the highlighted bar at the bottom of the screen to another menu selection. Press <Return> on the highlighted menu selection, or press the first letter of the selection to execute the command.

6.3.1 <S>earch - Will allow you to find a project using any information that you happen to know about the project. (e.g. Fiscal Year, Priority, City, Title, etc.)

Just enter the information that you want to look for. The program will display the first project it finds that meets the criteria that you entered. Not all fields need to be filled in. In fact, the program will find matches for partial fields. For example, if you enter "jack" in the city field, the program will find "Jackson", "JACKSONVILLE", or any other city with the four letters J-A-C-K in sequence. You will be asked if you want to continue searching. If you press "Y" for Yes, the program will continue looking for the next project that meets your criteria. If you press "N" for No, the last project located will be displayed.

The Priority field is used to conduct a "Quick Search". If information is entered in this field, all other fields will be ignored. If the requested priority exists, it will be found almost instantly.

6.3.2 <E>dit - Will allow you to change most of the information about the displayed project. Information that is displayed from another database (e.g. City, State, etc.) cannot be changed from the MINOR program.

6.3.3 <A>dd - Will allow you to add a new project to the database. You must enter both a Project Number and Facility ID before you can enter a new project! The project number will be checked to make sure that it is not already being used. The Facility ID will be checked to make sure that the facility exists. If the facility ID does not already exist, it must be added using the Facility program or Proj Doc program.

6.3.4 <D>elete - Will allow you to delete the project being displayed. You will be asked to verify that you POSITIVELY want to delete the project that is being displayed.

6.3.5 <F>irst - Takes you to the first project in the database. (The first project may vary depending on how the database is sorted.)

6.3.6 <L>ast - Takes you to the last project in the database. (The last project may vary depending on how the database is sorted.)

6.3.7 <Q>uit - Will exit the "scroll mode" and return you to the main menu.

#### 6.4 <R>eports:

All reports are generated using R&R Relational Report Writer. Reports can either be displayed on the screen, or printed on your printer. The following reports are available:

6.4.1 <1> Project CWE & PA - This report includes the Fiscal Year, Priority, Project Number, City, State, CWE, and PA. The total CWE and PA are displayed at the bottom of the report.

6.4.2 <2> Problems & Remarks - This report includes the Fiscal Year, Priority, Project Number, City, State, Problem flag, and both Remarks fields.

6.4.3 <3> Funding Information - This report includes the Fiscal Year, Priority, and Project Number. It also includes the Cost, Date Provided, Program Year, Returned dollars, and Date returned, for both Construction and Design Funds. The total Construction and Design Costs are displayed at the bottom of the report.

6.4.4 <4> Other Agencies - This report includes the Fiscal Year, Priority, Project Number, City, State, MACOM, CONUSA, Installation, and Corps District.

6.4.5 <5> Important Dates - This report includes the Fiscal Year, Priority, Project Number, City, State, Date Project Approved, Date Project Closed, Date Design Completed, and Date Project Completed.

6.4.6 <6> Type Projects - This report includes the Fiscal Year, Priority, Project Number, City, State, Specified Project, and Type Project.

After selecting your report, you are asked to "<D>isplay or <P>rint Report? (D/P)." If you answer "D" (the default, for Display), the report will be displayed on the screen. If you answer "P" (for Print), the report will be printed on your printer. Make sure your printer is turned on, on-line, and has paper. You will see a warning message if your printer is not ready. The default printer configuration is set up for an Epson (or compatible) printer. Run RRSETUP to change the printer configuration.

Next you are asked to select either "<A>ll, <S>pecified, or <U>nspecified?" projects to include in the report. Press "A", "S" or "U" to indicate which projects to select. Each report will indicate the number of records selected at the bottom of the report.

## 6.5 <U>tilities:

The utilities perform basic program and system maintenance, and are described below:

6.5.1 <S>ort Projects - This is where you decide in what order you want the information displayed. The bottom of the Sort Menu displays the current sorted order of the database.

*NOTE: The database will remain sorted in the order you select until you change it again using this sort utility.*

The following sorts are available:

<1> Priority (Only) - Sorted by Priority.

<2> FY & Priority - Sorted first by Fiscal Year, then within each Fiscal Year by Priority.

<3> FY, State, City - Sorted first by Fiscal Year, then within each Fiscal Year by State, then within each State by City.

<4> State, City - Sorted first by State, then within each State by City.

<5> City - Sorted by City.

<6> CWE (Only) - Sorted by CWE.

6.5.2 <B>ackup to Floppy - Allows you to make a backup copy of your data file (AR\_MINOR.DBF) to a floppy disk. *Use this utility frequently to safeguard your data!!*

6.5.3 <M>emory (RAM) Status - Displays the currently selected RAM drive, and the number of bytes of available conventional RAM.

6.5.4 <R>eindex Database - Occasionally the index files may become corrupted, especially if the data file is used outside of the MINOR program using dBASE. This selection will reindex all the existing index files and put everything back into proper order.

6.5.5 <D>uplicate Check - Checks all project numbers for duplicates. Pauses and displays project number if any duplicates are found. *Duplicate project numbers may cause unreliable program execution!*

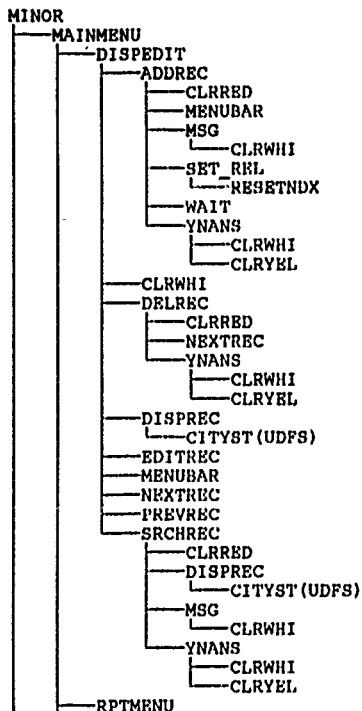

6.5.6 <C>hange Data Path - The default data path is the \DBF subdirectory under the subdirectory from which the program is executed. Normally the program will be executed from the \MCAR subdirectory, and the data will be in the \MCAR\DBF subdirectory of your hard disk. You may wish to copy this data to a RAM drive or other location on your hard disk to make temporary changes, etc. Use this utility to tell the program where the data files are located if you move them. New index files (.NDX) will automatically be created if they are not found with the data files.

*Remember that the following data files must all be located in the same place: AR\_MINOR.DBF, AR\_PLNFR.DBF and AR\_FACIL.DBF.*

6.6 <Q>uit to DOS:

This selection is used to exit the MINOR program and return to the Disk Operating System (or menu if the program was started from a menu). You will be asked "Are you sure? (Y/N)." Press "Y" to exit the program, or "N" to return to the main menu.

6.7 Program Structure

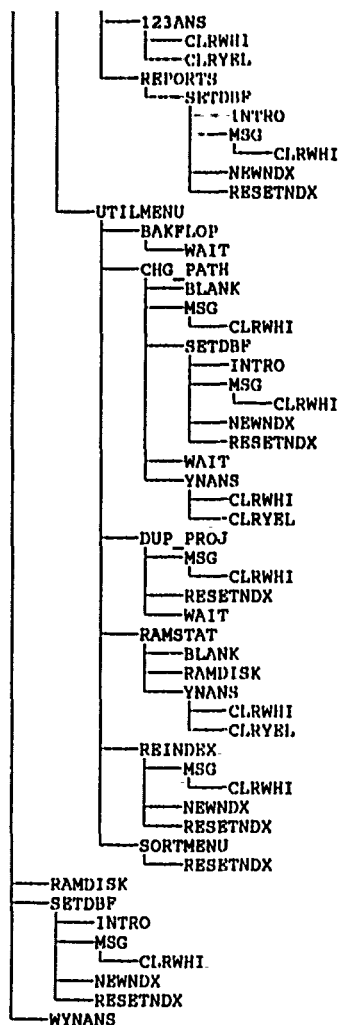

Figure 6.1

## CHAPTER 7: USAR LCM AUTOMATION UTILITIES

### 7.1 OVERVIEW

USAR LCM utilities are a set of programs designed to help the user maintain and manage the data base on disk. Figure 7.1 shows the utility programs included with LCM software: Database Directory, Data File Maintenance, Project Import/Export, Facility Import/Export, and Unit Import/Export.

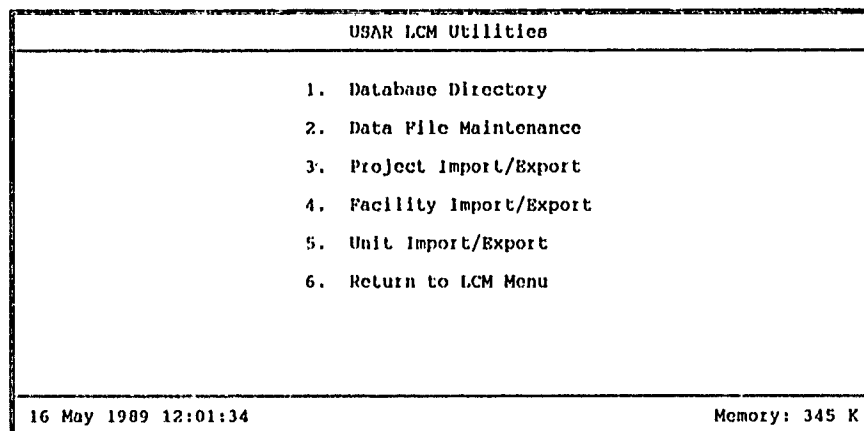

Figure 7.1

### 7.2 DATABASE DIRECTORY

The objective of Database Directory is to specify the DOS directory containing the MCAR Database.

### 7.3 DATA FILE MAINTENANCE

The objective of Data File Maintenance is to pack, sort, and index the data files. After a long time of using LCM software, databases may need to be packed, sorted, or reindexed so that the program can work more efficiently. The Data File Maintenance program has four options; Full-Scale Maintenance, Clean Up Data Files, Sort Data Files, Index Data Files.

The purpose of Full-Scale Maintenance is to physically clean up all records previously marked for deletion, sort remaining records, and then reindex all the data files on their key index. Clean Up Data Files will only clean up records previously marked for deletion and then reindex the data files. Sort Data Files will only sort all data and reindex them. Index Data Files will only reindex all data in the database. Another method to reindex the data files is to simply delete from the hard disk all the .ndx files. All the major LCM programs will test for the existence of the index file and reindex if they do not exist. Figure 7.2 lists the system tree for the Data File Maintenance option in the USAR LCM utilities.

Figure 7.2

## 7.4 IMPORT/EXPORT UTILITIES

The purpose of the three import/export utilities is to facilitate the exchange of records between computers and/or directories. The user can export individual projects, facilities, and/pr units one record at a time or by global search conditions such as city and state.

7.4.1 Project Import/Export copies project records from a source directory to a target directory. It does so by also copying the facility record associated with the project together with the unit records associated with it.

In the Source Directory slot, type the DOS directory containing the databases you want to export and press [Enter]. Then in the Target Directory, type the DOS directory to which you want to export the databases and press [Enter]. After that, Figure 10.6 will be shown on the screen to let you search the projects you want to export.

You can select to export the current project only, or to export all projects that fit the search criterion with each one confirmed before exporting, or to export all projects that fit the search criterion without confirmation.

Figure 7.3 lists the system tree diagram for the Project Import/Export utility.

Figure 7.3

7.4.2 Facility and Unit Import/Export utilities copy facilities and unit records respectively from a source directory to a target directory. If the target directory does not contain the files to house a MCAR database any of the three Import/Export utilities will create it at the time of exporting the first record. Figure 7.4 lists the system tree for Facility Import/Export utility and Figure 7.5 lists the system tree for Unit Import/Export utility.

Figure 7.4

Figure 7.5

---

**APPENDIX A: TERMS & ABBREVIATIONS****TERMS****Addition-Expansion-Extension**

A physical increase to a real property facility which adds to an overall external dimension of the facility.

**Alteration**

Work required to change interior configuration or other physical characteristics of an existing facility so that it may be more effectively adapted to or utilized for its presently designated functional purpose. This also may include equipment installed in and made part of an existing facility.

**Annual Training (AT) Site**

A training area used for the 14-day tour of full time training of Reserve Components' units and individuals; includes all improvements on land. (Examples of AT sites are barracks, storage areas, hardstands, maintenance shops, and special training facilities.

**Area Maintenance Support Activity (AMSA)**

A USAR activity established to provide, on an area basis, technical assistance and organizational support, which is beyond the supported unit's capability to accomplish during scheduled training assemblies.

**Armed Forces Reserve Center (AFRC)**

A facility in which units of two or more Military Departments or Army National Guard are permanently stationed for inactive duty training (IDT) and administration.

**Common-use Areas**

Areas of a USARC provided for the use of all assigned units.

**Construction**

The erection, installation, or assembly of a new facility, the addition, expansion, extension, alteration, conversion, or replacement of an existing facility or the relocation of a facility from one installation to another. This also includes equipment installed and made part of such a facility, related site preparation, excavation, filling and landscaping, or other land improvements. Construction type, classified by design life (AR 405-45, para 1-6) are:

- a. Temporary - 5 years or less
- b. Semi-Permanent - 5 to 25 years
- c. Permanent - more than 25 years.

**Construction Project**

A single action applicable to one or more real property facilities that will include all construction work, land acquisition, and items of installed equipment. Such action is taken for a specific purpose and to produce a complete and usable property facility or a complete improvement to a real property facility.

### **Conversion**

The work required to change functional use of interior arrangements or other physical characteristics of a facility or any part thereof. This includes installed equipment that may be used for a new functional purpose.

### **Equipment Concentration Site (ECS)**

An equipment storage area under the jurisdiction of a Major U.S. Army Reserve Command (MUSARC) commander and under the supervision of an AMSA. The ECS may contain USAR unit equipment needed for training during scheduled training assemblies, but beyond the unit's capability to store at home station or certain equipment required for WET site. Normally, equipment of more than one USAR unit is stored at the ECS.

### **Exclusive Use Areas**

Areas of a USARC or AFRC provided for the exclusive use of each assigned unit.

### **Facility**

A Real Property Facility (RPF) to include any interest in land, buildings, other structures, or training sites.

### **Joint Construction**

The combined efforts of two or more military components or services to construct a facility. One participant acts as the design and construction agent while costs are prorated.

### **Joint use Areas**

Areas of an AFRC provided for the use of all assigned units of the Services.

### **Organizational Maintenance Shop**

The structure used to train organizational maintenance personnel and to perform organizational level maintenance on USAR unit equipment.

### **Maintenance**

The day-to-day, periodic, or scheduled work required to preserve or maintain a facility in such condition that it may be effectively used for its functional purposes.

### **MAR Program**

A program through which the USAR acquires new facilities and replacement or improvement of existing facilities by purchase, transfer, or construction. This program also includes expansion, rehabilitation, conversion, and equipping of such facilities.

### **Real Property**

Land and rights therein, ground improvements, utility systems, and structures, excluding installed equipment.

### **Repair**

The restoration of a facility to such condition that it may be effectively utilized for its designated purpose. Repair may be accomplished by overhaul, reprocessing, or replacement of components or materials which have deteriorated by actions of the elements or wear and tear in use and which have not been corrected through maintenance.

**Replacement**

A complete reconstruction of a facility destroyed or run down beyond the point where it may be repaired economically.

**Reserve Component (RC)**

The Reserve Components are composed of the Army and Air National Guard and the reserve Forces of the Uniformed Services. These are referred to collectively as the Reserve Components.

**U.S. Army Reserve Center**

Facility in which one or more USAR units are stationed by permanent order for IDT and administration.

**Weekend Training (WET) Site**

A training area in reasonable proximity to the unit's permanent station; may include austere improvements.

B.1 AR\_AMSA

Alias: AR\_AMSA  
 Description: Facility AMSA Information  
 Key Field: FAC\_ID  
 11 Fields defined:

```

.....
Name      Type Length Description
AMSA_ADMIN N      3      Number of recognized AMSA administrative persons
AMSA_MCTEC N      3      Number of recognized AMSA auto of engineering/specified equipment mechanics
AMSA_MRCH  N      3      Number of recognized AMSA mechanics
AMSA_NO    C      4      AMSA number
AMSA_RCPER N      3      Total number of AMSA recognized personnel
AMSA_VSUP  N      4      Number of vehicles supported but not stationed at AMSA
COMMNO_TEC N      3      Number of recognized AMSA communication/electronic technicians
FAC_ID     C      5      Facility ID where AMSA is located (key field)
INSTR_TEC  N      3      Number of recognized AMSA instrument repair technicians
OTHER_PRR  N      3      Number of recognized AMSA other personnel
SMARM_TEC  N      3      Number of recognized AMSA small arms repair technicians
    
```

## B.2 AR\_FACIL

Alias: FAC

Description: Army Reserve Facility Information

Key Field: FAC\_ID

62 Fields defined:

Name	Type	Length	Description
AFRC	L	1	Armed forces reserve center
AMSA	L	1	Area maintenance support activity
AMSA_NO	C	4	AMSA number servicing this facility (do not use - invalid field)
AO_CONUSA	C	20	CONUSA action officer
AO_FORSCOM	C	20	FORSCOM action officer
AO_MUSARC	C	20	MUSARC action officer
AO_OCAR	C	20	OCAR action officer
BAND	L	1	Band room at facility
CONG_DIST	C	15	Congressional district
CONUSA	C	1	Continental United States Army
DAYS_FTP	N	1	Number of days/week center scheduled for full time personnel
DISTANCE_1	N	4	District of other active/guard/reserve within 25 miles radius
DISTANCE_2	N	4	District of other active/guard/reserve within 25 mile radius
DISTANCE_3	N	4	District of other active/guard/reserve within 25 mile radius
DISTANCE_4	N	4	District of other active/guard/reserve within 25 mile radius
DRAFT	L	1	Drafting room
DS_GS	L	1	Direct support of general support
EXFAC_COST	N	8	Cost of existing facility
EXIST_COST	N	8	Cost of existing shop
EXIST_SHOP	N	6	Existing maintenance shop size in gross square footage
EXIST_SIZE	N	7	Existing center size in gross square footage
EX_ADMIN	N	6	Existing administrative area size in net square footage
EX_ASMBLY	N	6	Existing center assemble area size in net square footage
EX_EDUC	N	6	Existing education area size in net square footage
EX_STORE	N	6	Existing storage area size in net square footage
EX_SUPPORT	N	6	Existing support area size in net square footage
FACILITY_1	C	14	Other active/guard/reserve within 25 mile radius
FACILITY_2	C	14	Other active/guard/reserve within 25 mile radius
FACILITY_3	C	14	Other active/guard/reserve within 25 mile radius
FACILITY_4	C	14	Other active/guard/reserve within 25 mile radius
FAC_CITY	C	23	City where facility is located
FAC_ID	C	5	Facility ID number (key field)
FAC_STATE	C	2	State where facility is located
FAC_STREET	C	30	Street address of facility
FAC_TITLE	C	30	Facility title
FAC_ZIP	C	10	Zip code of facility
GOCONF	L	1	General officer conference room
INSTCLASS	L	1	Instructor classroom
LOCATION_1	C	25	Location of other active/guard/reserve within 25 mile
LOCATION_2	C	25	Location of other active/guard/reserve within 25 mile
LOCATION_3	C	25	Location of other active/guard/reserve within 25 mile
LOCATION_4	C	25	Location of other active/guard/reserve within 25 mile
MBD	L	1	Medical section training and storage
MUSARC	C	20	MUSARC
NITE_WEEK	N	1	Number of nights/week center scheduled for reservists
OMS	L	1	Organizational maintenance shop
PHOTO	L	1	Photo lab
PHYEX	L	1	Physical examining section
RANGE	L	1	Suitable firing range within 60 miles or 90 minutes
SCIF	L	1	Sensitive compartmented information facility
SOIL	L	1	Soil testing lab
SPT_INST	C	15	Support installation
TELE_CITY	C	20	City location of facility telephone company
TELE_CO	C	25	Telephone company of facility
TELE_PHONE	C	14	Telephone number of facility telephone company
TELE_ST	C	30	Street location of facility telephone company
TELE_STATE	C	2	State location of facility telephone company
TELE_ZIP	C	10	Zip code of facility telephone company
USARC	L	1	United States Army Reserve Center
USARF	L	1	United States Armed Forces Storage
WEND_RES	N	1	Number of weekends/month center scheduled for reservists
PROPOSED	L	1	Proposed facility

B.3 AR\_INFOS

Alias: AR\_INFOS  
 Description: Project Information System Information  
 Key Field: PROJ\_NO  
 31 Fields defined:

Name	Type	Length	Description
IS_AUAMSCE	N	1	One telephone authorized for AMSA communication/electronic shop
IS_AUAMSCL	N	1	One telephone authorized for AMSA classroom
IS_AUAMSIR	N	1	One telephone authorized for AMSA instrument repair shop
IS_AUAMSSA	N	1	One telephone authorized AMSA small arms repair shop
IS_AUAMSSH	N	2	Number of telephones authorized AMSA shop office
IS_AUPLTIM	N	3	Number of telephones authorized full time employees
IS_AUFRALM	N	1	One fire alarm authorized per center
IS_AUIDSJS	N	1	One IDS/JSIDS authorized per center
IS_AUOMSSH	N	3	Number of telephones authorized for OMS shop office
IS_AURETEN	N	1	One retention authorized per center
IS_AUSPOFF	N	2	Number of telephones authorized per supply office
IS_AUTOTIN	N	4	Number of total authorized instruments at center
IS_AUUNTCM	N	3	Number of telephones authorized for personnel with common office space
IS_AUUNTEX	N	3	Number of telephones authorized for personnel with exclusive office space
IS_ESTIMAT	N	6	Estimate cost of instruments at center
IS_RQAMSCE	N	1	Telephones requested per AMSA communication/electronic shop
IS_RQAMSCL	N	1	Telephones requested per AMSA classroom
IS_RQAMSIR	N	1	Telephones requested per AMSA instrument repair shop
IS_RQAMSSA	N	1	Telephones requested per AMSA small arms repair shop
IS_RQAMSSH	N	2	Telephones requested for AMSA shop office
IS_RQFLTIM	N	3	Telephones requested for full time employees
IS_RQFRALM	N	1	Number of requested fire alarms
IS_RQIDSJS	N	1	Number of requested IDS/ASID per center
IS_RQOMSSH	N	3	Number of requested telephones for OMS shop office
IS_RQRETEEN	N	1	Number of requested retention per center
IS_RSPEC	N	2	Special requests to justified on enclosure
IS_RSPOFF	N	2	Number of requested telephones for supply offices
IS_ROTOTIN	N	4	Total number of requested instruments
IS_RQUUNTCM	N	3	Number of telephones requested for personnel with common office space
IS_RQUUNTEX	N	3	Number of telephones requested for personnel with exclusive office space
PROJ_NO	C	5	Project number (key field)

B.4 AR\_PAMSA

Alias: AR\_PAMSA  
 Description: Project AMSA Information  
 Key Field: PROJ\_NO  
 11 Fields defined:

Name	Type	Length	Description
AMSA_NO	C	4	AMSA number
PROJ_NO	C	5	Project number associated with AMSA (key field)
XAMSA_ADMN	N	3	Change in recognized AMSA administrative personnel
XAMSA_MCTC	N	3	Change in recognized AMSA auto of engineering/specified equipment
XAMSA_MECH	N	3	Change in recognized AMSA mechanics
XAMSA_RCPR	N	3	Total number of AMSA recognized personnel
XAMSA_VSUP	N	4	Change in vehicles supported but not stationed at AMSA
XCOMM_TEC	N	3	Change in recognized AMSA common/electric technicians
XINSTR_TEC	N	3	Change in recognized AMSA instrument repair
XOTHER_PER	N	3	Change in recognized AMSA other personnel
XSMARM_TEC	N	3	Change in recognized AMSA small arms repair

## B.5 AR\_REQS

Alias: AR\_REQS

Description: Project Space Allocation Worksheet Requested/Approved Information

Key Field: PROJ\_NO

100 Fields defined:

Name	Type	Length	Description
CNTGN_COST	N	4	Contingent cost = 5% total construction cost, based on requested data
CONST_COST	N	5	Total construction cost, based on requested data
FACPR_COST	N	5	Total cost of facility from requested data
FACROAD_CT	N	8	Cost of the requested center addition
FACSP_COST	N	4	Supporting facility cost, based on requested data
PROJ_COST	N	5	Total cost of project, based on requested data
PROJ_NO	C	5	Project number (key field)
RO_ACCESS	N	5	Space requested for access roads
RO_ADMIN	N	8	Space requested for center administrative area
RO_ADMSPPT	N	4	Space requested for administrative support area
RO_AMSAAARS	N	4	Space requested for AMSA small arms repair shop
RO_AMSABRM	N	4	Space requested for AMSA battery room
RO_AMSACDA	N	3	Space requested for AMSA classroom/break area
RO_AMSACES	N	4	Space requested AMSA communications/electronic shop
RO_AMSAFIS	N	4	Space requested for AMSA flammable storage
RO_AMSAIRS	N	4	Space requested for AMSA instrument repair shop
RO_AMSAIRM	N	3	Space requested for AMSA locker room
RO_AMSAMRP	N	5	Space requested for AMSA military equipment parking
RO_AMSAMRR	N	3	Space requested for AMSA men's toilet/restroom
RO_AMSAPOV	N	4	Space requested for AMSA privately owned vehicles parking
RO_AMSASAV	N	4	Space requested for AMSA small arms vault
RO_AMSASHP	N	4	Space requested for AMSA shop office
RO_AMSASRM	N	4	Space requested for AMSA supply room
RO_AMSATRM	N	4	Space requested for AMSA tool room
RO_AMSAWP	N	2	Space requested for AMSA wash platform
RO_AMSAWRR	N	3	Space requested for AMSA women's toilet/restroom
RO_AREADD	N	7	Space requested for area to be added
RO_ARMORER	N	3	Space requested for armorer
RO_ARMSVLT	N	4	Space requested for center arms vault
RO_ASHALL	N	4	Space requested for assembly hall
RO_ASMBLY	N	5	Space requested for center assembly area
RO_BAND	N	4	Space requested for center band room
RO_CAGRS	N	5	Space requested for center storage cages
RO_CHTAB	N	4	Space requested for chair and table storage
RO_CIRC	N	6	Space requested for center circulation
RO_CLSRMS	N	5	Space requested for center classrooms
RO_COMSEC	N	4	Space requested for center COMSEC area
RO_COMSTOR	N	4	Space requested for center COMSEC storage
RO_COVERED	N	4	Space requested for covered storage
RO_DRAFT	N	3	Space requested center drafting rooms
RO_EDUC	N	6	Space requested educational area
RO_ELEC	N	3	Space requested for center electrical system
RO_FACADD	N	6	Size of the requested center addition
RO_FDPREP	N	3	Space requested for the preparation of food
RO_FDSTOR	N	3	Space requested for storage of food
RO_FENCLTG	N	5	Space requested for MEP fencing and lighting
RO_FLAMBLE	N	3	Space requested for center flammable storage area
RO_FULLADM	N	5	Space requested full time personnel at center
RO_GOCONF	N	3	Space requested for general office conference room
RO_GROSS	N	8	Total center gross area
RO_INSTRCLS	N	3	Space requested for center instructor classrooms
RO_JANETOR	N	2	Space requested for center janitorial storage
RO_LIBRRM	N	4	Space requested for center library reading room
RO_LIBST	N	4	Space requested for center library storage
RO_LNGCTR	N	4	Space requested for center learning center
RO_MRCH	N	5	Space requested for center mechanical area
RO_MED	N	3	Space requested for center medical section area
RO_MENSRR	N	4	Space requested for center men's toilets & shower
RO_NET	N	8	Total center net area
RO_OMSBAT	N	3	Space requested for OMS shop battery storage room
RO_OMSFAM	N	3	Space requested for OMS shop flammable storage
RO_OMSSHOP	N	4	Space requested for OMS shop office
RO_OMSSTOR	N	4	Space requested for OMS shop storage room
RO_OMSTLT	N	3	Space requested for OMS shop unisex toilet
RO_OMSTOOL	N	4	Space requested for OMS tools & parts room
RO_OMSWBY	N	5	Space requested for OMS work bays
RO_OMSWP	N	2	Space requested for OMS wash platforms
RO_OSPNM1	C	18	Other special training space 1 name
RO_OSPNM2	C	18	Other special training space 2 name
RO_OSPSP1	N	5	Other special training space 1 SQFT
RO_OSPSP2	N	5	Other special training space 2 SQFT
RO_OTHRSR	N	5	
RO_PAVEMRP	N	5	Space requested for each item of equipment
RO_PHOTO	N	3	Space requested for center photo lab
RO_PHYEX	N	4	Space requested for center physical exam section area
RO_POVPARK	N	5	Space requested for privately owned vehicle park
RO_PUBSTOR	N	4	Space requested for center publication storage
RO_RANGE	N	4	Space requested for center rifle range
RO_RECRET	N	3	Space requested for center recruiting & retention
RO_SCIF	N	3	Space requested for center SCIF area

RO_SCOPE	N	7	Total area of existing facility & requested additions
RO_SCULL	N	3	Space requested for kitchen scullery
RO_SHOPGRS	N	6	Space requested for gross shop area
RO_SHOPMCS	N	4	Space requested for mechanical/custodial shop
RO_SHOPNET	N	5	Space requested for net shop area
RO_SHPADD	N	6	Size of requested shop addition
RO_SOIL	N	3	Space requested for center soil testing lab
RO_SPECIAL	N	5	Space requested for special training areas
RO_STAGE	N	4	Space requested for center supply staging area
RO_STORE	N	6	Space requested for center storage
RO_STRUCT	N	6	Space requested for center structure
RO_SUPOFF	N	4	Space requested for center supply offices
RO_SUPPORT	N	6	Space requested for center support area
RO_TELE	N	3	Space requested for center telephone system
RO_TNGAST	N	4	Space requested for center training aid storage
RO_UNITCOM	N	6	Space requested for unit common administrative area
RO_UNITEX	N	7	Space requested for unit exclusive space
RO_WOMENRR	N	3	Space requested for women's toilets & showers
SHPROAD_CT	N	8	Cost of the requested shop addition
SPADM_COST	N	4	Supervision and administration cost, based on request data

## B.6 AR\_UNIT

Alias: A \_UNIT  
 Description: Army Reserve Unit Structure Information  
 Key Field: UIC  
 49 Fields defined:

Name	Type	Length	Description
ABTRACKED	N	2	Number of tracked vehicles actually located at base
ABTRAILER	N	2	Number of trailers actually located at base
ADWHEELED	N	2	Number of wheeled vehicles actually located at base
ASCSWPNS	N	3	Assigned crew served weapons
ASPULL_CIV	N	3	Number of unit full time civilian assigned strength
ASPULL_ENL	N	3	Number of unit full time enlisted assign strength
ASPULL_OFF	N	3	Number of full time officer assigned strength
ASSTR_ENL	N	3	Number of unit enlisted assigned strength
ASSTR_OFF	N	3	Number of unit officer assigned strength
ASSTR_TOT	N	3	Number of total unit assigned strength
ASTRACKED	N	2	Number of tracked vehicles assigned to unit
ASTRAILER	N	2	Number of trailers assigned to unit
ASWHEELED	N	2	Number of wheeled vehicles assigned to unit
AUFULL_CIV	N	3	Number of authorized full time civilian strength at unit
AUFULL_ENL	N	3	Number of authorized full time enlisted strength at unit
AUFULL_OFF	N	3	Number of authorized full time officer strength at unit
AUPRNSTF	N	3	Number of principal staff officers authorized to unit
AUSTR_ENL	N	3	Number of unit required enlisted strength
AUSTR_OFF	N	3	Number of unit required officer strength
AUSTR_TOT	N	3	Total unit required strength
AUTRACKED	N	2	Number of tracked vehicles authorized to unit
AUTRAILER	N	2	Number of trailers authorized to unit
AUWHEELED	N	2	Number of wheeled vehicles authorized to unit
COMM_BG	N	1	Number of brigadier generals as commander
COMM_COL	N	2	Number of colonels as commander
COMM_COMP	L	1	Is there a company commander
COMM_MG	N	1	Number of major generals as commander
COMSEC	L	1	Does unit have comsec account
COOKS	N	2	Number of cooks authorized to unit
CSWPNS	N	3	Number of crew served weapons in unit
CUR_FAC	C	5	Current facility ID
DRILL_WEND	C	1	Which weekend of the month will unit drill
MNT_ADMIN	N	2	Number of maintenance administrative personnel authorized to unit
MNT_PER	N	2	Number of maintenance personnel authorized to unit
MTOE	L	1	Mobilization table of organization and equipment
OFF_ADMIN	N	2	Number of full time administrative personnel authorized to unit
OFF_MNT	N	2	Number of full time maintenance personnel authorized to unit
OFF_SPACE	N	3	Number of unit personnel requiring open office-space
OFF_SUPPL	N	2	Number of full time supply personnel authorized to unit
SCHOOL	L	1	United States Army Reserve forces school
SMALL_ARMS	L	1	
TDA	L	1	Table of distribution and allowances
UIC	C	6	Unit ID Code (key field)
UNIT_EX	N	2	Number of unit officers requiring exclusive office space
UNIT_MECH	N	2	Number of mechanics located in unit
UNIT_NAME	C	25	Unit name
UNIT_SUPPL	L	1	Does unit have unit supply account
PROPOSED	L	1	Proposed unit
OFF_MNTADM	N	2	Number of full time maintenance administrative personnel authorized to unit

B.7 PE\_1390

Alias: PE\_1390  
 Description: Project Editor DD Form 1390 Information  
 Key Field: PROJ\_NO  
 61 Fields defined:

Name	Type	Length	Description
ACRES	N	6	Number of acres of land required
AIR_COST	N	3	Cost of air pollution deficiency
ASGD_AUTH	N	3	Assigned reserves divided by authorized reserves
DAYS_FTP	N	1	Number of days/week facility scheduled for full time personnel
DISTANCE_1	N	4	Distance of other active/guard/reserve facility
DISTANCE_2	N	4	Distance of other active/guard/reserve facility
DISTANCE_3	N	4	Distance of other active/guard/reserve facility
DISTANCE_4	N	4	Distance of other active/guard/reserve facility
DISTANCE_5	N	4	Distance of other active/guard/reserve facility
FACAPL_CIV	N	3	Number of assigned full time civilian strength
FACAPL_ENL	N	4	Number of assigned full time enlisted strength
FACAPL_OFF	N	3	Number of assigned full time officers
FACAPL_TOT	N	4	Total number of assigned full time strength
FACAGR_ENL	N	4	Total number of assigned guard/reserve enlisted strength
FACAGR_OFF	N	3	Total number of assigned guard/reserve officer strength
FACAGR_TOT	N	4	Total number of assigned guard/reserve strength
FACAS_AGGR	N	4	Assigned aggregate vehicles
FACAS_EQUP	N	4	Total number of vehicles assigned at facility
FACAS_OTHR	N	3	Number of other vehicles assigned at facility
FACAS_TRKD	N	3	Number of tracked vehicles assigned at facility
FACAS_TRLR	N	3	Number of trailers assigned at facility
FACAS_WHLD	N	3	Number of wheeled vehicles assigned at facility
FACAU_AGGR	N	4	Authorized aggregate vehicles
FACAU_EQUP	N	4	Total number of vehicles authorized at facility
FACAU_OTHR	N	3	Number of other vehicles authorized at facility
FACAU_TRKD	N	3	Number of tracked vehicles authorized at facility
FACAU_TRLR	N	3	Number of trailers authorized at facility
FACAU_WHLD	N	3	Number of wheeled vehicles authorized at facility
FACFUL_CIV	N	3	Number of full time civilians authorized to facility
FACFUL_ENL	N	4	Number of enlisted strength authorized to facility
FACFUL_OFF	N	3	Number of officers authorized to facility
FACFUL_TOT	N	4	Total strength authorized to facility
FACGR_ENL	N	4	Total number of enlisted strength authorized to guard/reserve
FACGR_OFF	N	3	Total number of officers authorized to guard/reserve
FACGR_TOT	N	4	Total strength authorized to guard/reserve
FACILITY_1	C	14	Other active/guard/reserve facility
FACILITY_2	C	14	Other active/guard/reserve facility
FACILITY_3	C	14	Other active/guard/reserve facility
FACILITY_4	C	14	Other active/guard/reserve facility
FACILITY_5	C	14	Other active/guard/reserve facility
HLTH_COST	N	3	Safety and occupational health deficiency cost
JOINT_UNI	L	1	Joint or unilateral recommended construction
LAND_Acq	C	54	Reason for land acquisition
LOCATION_1	C	25	Location of other active/guard/reserve facility
LOCATION_2	C	25	Location of other active/guard/reserve facility
LOCATION_3	C	25	Location of other active/guard/reserve facility
LOCATION_4	C	25	Location of other active/guard/reserve facility
LOCATION_5	C	25	Location of other active/guard/reserve facility
NITE_WEEK	N	1	Number of night/week reservists at facility
PERS_DATE	C	11	Date of recorded personnel strength
PROJECT_1	C	30	Other project planned in next four years
PROJECT_2	C	30	Other project planned in next four years
PROJ_COST1	C	6	Cost of project planned in next four years
PROJ_COST2	C	6	Cost of project planned in next four years
PROJ_FY1	C	4	Fiscal year of project planned in next four years
PROJ_FY2	C	4	Fiscal year of project planned in next four years
PROJ_NO	C	5	Project identification number (key field)
RECOM_DATE	C	11	Date of state review board recommendation
VEH_NAME	C	20	Other vehicle name
WATER_COST	N	?	Cost of water pollution deficiency
WEND_RES	N		Number of weekends/month facility scheduled for reservist

Alias: PE\_PROJ  
 Description: Project Editor Basic Project Information  
 Key Field: PROJ\_NO  
 18 Fields defined:

Name	Type	Length	Description
ADQ_SF	N	7	Amount of adequate square foot at facility
AREA_UM	C	2	Unit of measure for areas
CAT_CODE	C	6	Category code: 171-40, 214-09, or 441-10
COMPONENT	C	5	Project component
CONUSA	C	1	Continental United States Army
COST_NDX	N	4	Cost index
FAC_CITY	C	23	City where facility is located
FAC_STATE	C	2	State where facility is located
FAC_TITLE	C	30	Facility title
PREP_DATE	C	9	Preparation date of documents
PROG_ELMNT	C	6	Program element
PROJ_COST	N	5	Total cost of project
PROJ_FY	C	4	Project fiscal year
PROJ_NO	C	5	Project identification number (key field)
PROJ_TITLE	C	50	Project title
SCOPE_SF	N	7	Scope of project in square feet
SUBSTD_SF	N	7	Amount of substandard square feet at facility
PROPOSED	L	1	Proposed project

## B.10 AR\_CALC

Alias: AR\_CALC  
 Description: Project Calculated Information  
 Key Field: PROJ\_NO  
 117 Fields defined:  
 .....

Name	Type	Length	Description
AMSA_WBAYS	N	2	Number of work bays authorized for AMSA
AMSA_WPLAT	N	1	Number of wash platforms authorized AMSA
CAGE_MTOE	N	3	Number of storage cages authorized center MTOE
CAGE_TDA	N	2	Number of storage cages authorized center TDA
CAGE_TOT	N	3	Total number of storage cages authorized for center
CAGE_USAR	N	2	Number of storage cages authorized center USAR
DW_LARGE	N	4	Largest of total DW1 (drill weekend 1), DW2, & DW3
ECS_WASHPL	N	1	Number of wash platforms authorized of ECS
FACAD_COST	N	8	Cost of authorized center addition
MAP_LARGE	N	4	Number of personnel in largest maintenance administrative drill week
OMS_WBAYS	N	2	Number of work bays authorized for OMS
OOS_LARGE	N	4	Number of personnel requiring open office space in largest drill week
PROJ_NO	C	5	Project number (key field)
SHPAD_COST	N	8	Cost of authorized shop addition
SP_ACCESS	N	5	Total space authorized for access roads
SP_ADMIN	N	8	Total space authorized for center administrative area
SP_ADMSPT	N	4	Total space authorized for administrative support area
SP_AMSAARS	N	4	Space authorized for AMSA small arms repair shop
SP_AMSABRM	N	4	Space authorized for AMSA battery room
SP_AMSACBA	N	3	Space authorized for AMSA classroom/break area
SP_AMSACES	N	4	Space authorized for AMSA communication/electronics shop
SP_AMSAFLS	N	4	Space authorized AMSA flammable storage
SP_AMSAIRS	N	4	Space authorized AMSA instrument repair shop
SP_AMSALRM	N	3	Space authorized AMSA locker room
SP_AMSAMRP	N	5	Space authorized AMSA military equipment parking
SP_AMSAMRR	N	3	Space authorized AMSA men's toilet/restroom
SP_AMSAPOV	N	4	Space authorized AMSA private owned vehicle parking
SP_AMSASAV	N	4	Space authorized AMSA small arms vault
SP_AMSASHP	N	4	Space authorized AMSA shop office
SP_AMSASRM	N	4	Space authorized AMSA supply room
SP_AMSATRM	N	4	Space authorized AMSA tool room
SP_AMSAWP	N	2	Space authorized AMSA wash platform
SP_AMSAWRR	N	3	Space authorized AMSA women's toilet/restroom
SP_APRON	N	4	Space authorized service or access apron
SP_ARMORER	N	3	Space authorized for armorer
SP_ARMSVLT	N	4	Space authorized for center arms vault
SP_ASHALL	N	4	Space authorized for an assembly hall
SP_ASMBLY	N	5	Space authorized for center assembly area
SP_BAND	N	4	Space authorized for center band rooms
SP_BG	N	4	Space authorized brigadier general at center
SP_CAGES	N	5	Space authorized center storage cages
SP_CDRCOL	N	4	Space authorized COL (0-6) commanders at center
SP_CDRLTC	N	4	Space authorized LTC (0-5) commanders at center
SP_CHTAB	N	4	Space authorized chair and table storage
SP_CIRC	N	6	Space authorized center circulation
SP_CLSRMS	N	5	Space authorized center classrooms
SP_COMSRC	N	4	Space authorized center COMSEC area
SP_COMSTOR	N	4	Space authorized center COMSEC storage
SP_COVERED	N	4	Space authorized covered storage
SP_CSWPNS	N	4	Space authorized crew served weapons storage
SP_DRAFT	N	3	Space authorized drafting rooms
SP_ECSSHOP	N	5	Space authorized ESC shop
SP_EDUC	N	6	Space authorized educational area
SP_ELEC	N	3	Space authorized center electrical system
SP_FACADD	N	6	Size of authorized center addition
SP_FDPREP	N	3	Space authorized for the preparation of food
SP_FDSTOR	N	3	Space authorized for the storage of food
SP_FENCLTG	N	5	Space authorized for MEP fencing and lighting
SP_FLAMBLE	N	3	Space authorized center flammable storage area
SP_FTSUPOP	N	4	Space authorized full time supply technicians
SP_FUELSTD	N	4	Space authorized ECS fuel storage & dispensing system
SP_PULLADM	N	5	Space authorized full time personnel at center
SP_GOCONF	N	3	Space authorized general officer conference room
SP_GROSS	N	8	Total center gross area
SP_HARDSTD	N	5	Space authorized equipment concentration site hardstd
SP_HQDET	N	4	Space authorized headquarter detachment commander
SP_INSTCLS	N	3	Space authorized center instructor classrooms
SP_JANSTOR	N	2	Space authorized center janitorial storage area
SP_LIBRRM	N	4	Space authorized center library reading room
SP_LIBST	N	4	Space authorized center library storage
SP_LNGCTR	N	4	Space authorized center learning center
SP_MECH	N	5	Space authorized center mechanical area
SP_MED	N	3	Space authorized center medical section area
SP_MENSRR	N	4	Space authorized center men's toilets & showers
SP_MG	N	4	Space authorized center major general
SP_NET	N	8	Total center net area
SP_NOM	N	5	Total center nominal area
SP_OMSBAT	N	3	Space authorized OMS shop battery storage room
SP_OMSFLAM	N	3	Space authorized OMS shop flammable storage
SP_OMSMAN	N	4	Space authorized OMS shop office for authorized full time maintenance

SP_OMSOFF	N	4	Space authorized OMS shop office for LDW OMS administration
SP_OMSSHOP	N	4	Space authorized OMS shop office
SP_OMSSTOR	N	4	Space authorized OMS shop storage room
SP_OMSTILT	N	3	Space authorized OMS shop unisex toilet
SP_OMSTOOL	N	4	Space authorized OMS tools & parts room
SP_OMSWHAY	N	5	Space authorized OMS work bays
SP_OMSWP	N	2	Space authorized OMS wash platforms
SP_OTHRSP	N	4	
SP_PAVRMBP	N	5	Space authorized each item of equipment
SP_PHOTO	N	3	Space authorized center photo lab
SP_PHYEX	N	4	Space authorized physical exam section area
SP_POVPARK	N	5	Space authorized privately owned vehicle parking
SP_PRNSTP	N	4	Space authorized principal staff
SP_PUBSTOR	N	4	Space authorized center publication storage
SP_RANGE	N	4	Space authorized center rifle range
SP_RECRET	N	3	Space authorized recruiting & retention office
SP_SCIF	N	3	Space authorized center sensitive compartmented information facility (SCIF)
area			
SP_SCOPE	N	7	Total area of existing facility & authorized addition
SP_SCULL	N	3	Space authorized kitchen scullery
SP_SHOPGRS	N	6	Space authorized gross shop area
SP_SHOPMCS	N	4	Space authorized mechanical/custodial shop
SP_SHOPNET	N	5	Space authorized net shop area
SP_SHPADN	N	6	Size of authorized shop addition
SP_SMLARMS	N	4	Space authorized small arms storage
SP_SOIL	N	3	Space authorized center soil testing lab
SP_SPECIAL	N	5	Space authorized special training areas
SP_STAGE	N	4	Space authorized center supply staging area
SP_STORE	N	6	Space authorized center storage
SP_STRUCT	N	6	Space authorized center structure
SP_SUPOFF	N	4	Space authorized center supply offices
SP_SUPPORT	N	6	Space authorized center support area
SP_TELE	N	3	Space authorized center telephone system
SP_TNGAST	N	4	Space authorized center training aid storage
SP_UNITCOM	N	6	Space authorized unit common administrative area
SP_UNITEX	N	7	Space authorized unit exclusive area at center
SP_UNSUPOP	N	4	Space authorized unit(s) property account(s)
SP_WOMENRR	N	3	Space authorized women's toilets & showers

## B.11 AR\_NOTE

Alias: AR\_NOTE

Description: Project Documentation Memo Fields

Key Field: PROJ\_NO

78 Fields defined:

Name	Type	Length	Description
DD_1391	M	10	Memo field for 1391
JUSTF MEMO	M	10	Memo for 1391 justification
NOTE_1A	M	10	Note for full time administrative area
NOTE_1B	M	10	Note for unit exclusive administrative area
NOTE_1C	M	10	Note for unit common administrative area
NOTE_1D	M	10	Note for retention administrative area
NOTE_1E	M	10	Note for administrative support administrative area
NOTE_2A	M	10	Note for assembly hall assembly area
NOTE_2B	M	10	Note for chair & table storage assembly area
NOTE_2C1	M	10	Note for food preparation assembly area
NOTE_2C2	M	10	Note for scullery assembly area
NOTE_2C3	M	10	Note for food storage assembly area
NOTE_2D	M	10	Note for arms vault assembly area
NOTE_2E	M	10	Note for armorer assembly area
NOTE_3A	M	10	Note for classrooms education area
NOTE_3B	M	10	Note for library reading room education areas
NOTE_3C	M	10	Note for learning center education areas
NOTE_3D	M	10	Note for library storage education areas
NOTE_3E	M	10	Note for training and storage education area
NOTE_3F	M	10	Note for comsec training education area
NOTE_4A	M	10	Note for unit & individual storage area
NOTE_4B	M	10	Note for staging storage area
NOTE_4C	M	10	Note for supply offices storage area
NOTE_4D	M	10	Note for comsec storage area
NOTE_4E	M	10	Note for janitorial storage area
NOTE_4F	M	10	Note for flammable storage area
NOTE_5A	M	10	Note for rifle range special training area
NOTE_5B	M	10	Note for band room special training area
NOTE_5C	M	10	Note for drafting room special training area
NOTE_5D	M	10	Note for general office conference room special training room
NOTE_5E	M	10	Note for instructor classrooms special training area
NOTE_5F	M	10	Note for medical section training & storage special training area
NOTE_5G	M	10	Note for photo lab special training area
NOTE_5H	M	10	Note for physical exam section special training area
NOTE_5I	M	10	Note for publications storage special training area
NOTE_5J	M	10	Note for sensitive compartment information facility special training area
NOTE_5K	M	10	Note for soil testing lab special training area
NOTE_5L	M	10	Other special spaces
NOTE_5M	M	10	Other special spaces
NOTE_6A	M	10	Note for men's toilets & showers support area
NOTE_6B	M	10	Note for women's toilets & showers support area
NOTE_6C	M	10	Note for mechanical support area
NOTE_6D	M	10	Note for electrical support area
NOTE_6E	M	10	Note for telephone support area
NOTE_7A	M	10	Note for OMS shop office maintenance shop area
NOTE_7B	M	10	Note for OMS unisex toilet maintenance shop area
NOTE_7C	M	10	Note for OMS tool storage maintenance shop area
NOTE_7D	M	10	Note for OMS parts storage OMS shop area
NOTE_7E	M	10	Note for OMS battery storage/charging maintenance shop
NOTE_7F	M	10	Note for OMS flammable storage maintenance shop area
NOTE_7G	M	10	Note for AMSA shop office maintenance shop area
NOTE_7H	M	10	Note for AMSA men's toilets maintenance shop area
NOTE_7I	M	10	Note for AMSA women's toilets maintenance shop area
NOTE_7J	M	10	Note for AMSA locker room maintenance shop area
NOTE_7K	M	10	Note for AMSA classroom/break area maintenance shop area
NOTE_7L	M	10	Note for AMSA tool room maintenance shop area
NOTE_7M	M	10	Note for AMSA supply room maintenance shop area
NOTE_7N	M	10	Note for AMSA battery room maintenance shop area
NOTE_7O	M	10	Note for AMSA common/electric shop maintenance shop area
NOTE_7P	M	10	Note for AMSA instrument repair shop maintenance shop area
NOTE_7Q	M	10	Note for AMSA small arms repair shop maintenance shop area
NOTE_7R	M	10	Note for AMSA small arms vault maintenance shop area
NOTE_7S	M	10	Note for AMSA flammable storage maintenance shop area
NOTE_7T	M	10	Note for mechanics/custodial maintenance shop area
NOTE_7U	M	10	Note for work bays maintenance shop area
NOTE_8A	M	10	Note for POV parking center supporting facility
NOTE_8B	M	10	Note for POV parking AMSA supporting facilities
NOTE_8C	M	10	Note for OMS MEP supporting facilities
NOTE_8D	M	10	Note for AMSA MEP supporting facilities
NOTE_8E	M	10	Note for wash platforms OMS supporting facilities
NOTE_8F	M	10	Note for wash platforms AMSA supporting facilities
NOTE_8G	M	10	Note for covered storage supporting facilities
NOTE_8H	M	10	Note for MEP fencing & lighting supporting facility
NOTE_8I	M	10	Note for access roads supporting facilities
NOTE_CIR	M	10	Note for circulation
NOTE_STR	M	10	Note for structure
PROJ MEMO	M	10	Memo for description of proposed construction
PROJ_NO	C	5	Project number (key field)

## B.14 AR\_UTOT

Alias: AR\_UTOT  
 Description: Project Documentation Unit Totals  
 Key Field: PROJ\_NO  
 56 Fields defined:

Name	Type	Length	Description
AUFL_ADMIN	N	3	Number of authorized full time administrative personnel
AUFL_MAINT	N	3	Number of authorized full time maintenance personnel
AUFL_SUPPL	N	2	Number of authorized full time supply technicians
AUMECH_LDW	N	3	Number of authorized mechanics on largest drill week
COMSEC_ACT	N	2	Number of unit(s) authorized comsec account(s)
DW_LDW	N	1	Number of the largest drill weekend
RCSHQ_ITEM	N	4	Number of items of equipment stored at ECS
EQUIP_ITEM	N	3	Number of items of equipment authorized for home stationed storage
FACAB_EQUP	N	4	Actual number of total vehicles at base
FACAB_TRKD	N	3	Actual number of tracked vehicles at base
FACAB_TRLR	N	3	Actual number of trailers at base
FACAB_WHLR	N	3	Actual number of wheeled vehicles at base
FACAPL_CIV	N	3	Total number of assigned full time civilian strength
FACAPL_ENL	N	4	Total number assigned full time enlisted strength
FACAPL_OFF	N	3	Total number assigned full time officer strength
FACAPL_TOT	N	4	Total center assigned full time strength
FACAGR_ENL	N	4	Total number assigned guard/reserve enlisted strength
FACAGR_OFF	N	3	Total number assigned guard/reserve officer strength
FACAGR_TOT	N	4	Total center assigned guard/reserve strength
FACAS_EQUP	N	4	Total number vehicles assigned at center
FACAS_TRKD	N	3	Total number tracked vehicles assigned at center
FACAS_TRLR	N	3	Total number trailers assigned at center
FACAS_WHLR	N	3	Total number wheeled vehicles assigned at center
FACAU_EQUP	N	4	Total number vehicles authorized at center
FACAU_STR	N	4	Total authorized strength of all units at center
FACAU_STWP	N	4	Total authorized strength of all units authorized weapons
FACAU_TRKD	N	3	Total number tracked vehicles authorized at center
FACAU_TRLR	N	3	Total number trailers authorized at center
FACAU_WHLR	N	3	Total number wheeled vehicles authorized at center
FACCDR_BG	N	1	Total number brigadier general commanders
FACCDR_COL	N	2	Total number colonel commanders at center
FACCDR_LTC	N	2	Total number lieutenant colonel commanders
FACCDR_MG	N	1	Total number major general commanders at center
FACFUL_CIV	N	3	Total number authorized full time civilian assigned to all units
FACFUL_ENL	N	4	Total number authorized full time engineers assigned to all unit
FACFUL_OFF	N	3	Total number authorized full time officers assigned to all unit
FACFUL_TOT	N	4	Total number full time civilian enlisted & officer assigned to unit
FACGR_ENL	N	4	Total authorized guard/reserve enlisted strength
FACGR_OFF	N	3	Total authorized guard/reserve officer strength
FACGR_TOT	N	4	Total authorized guard/reserve strength
FACSTR_TOT	N	5	Total authorized strength of facility
FAC_COOKS	N	2	Total number of cooks at center
FAC_CSWPNS	N	3	Total number of crew served weapons
FAC_HQDET	N	3	Total number headquarter detachment commanders
FAC_PRNSTF	N	3	Total number of principal staff officers
FAC_WBAYS	N	2	Number of authorized workbays located at facility
MAP_LDW	N	1	Number of the largest maintenance administrative personnel drill weekend
MECH_TOT	N	3	Total number of mechanics authorized units stationed at center
OOS_LDW	N	1	Number of largest maintenance weekend requested open office space
PROJ_NO	C	5	Project number (key field)
RESTR_MTOE	N	4	Total required strength of center MTOE unit(s)
RESTR_TDA	N	4	Total required strength of center TDA & training division unit
RESTR_USAR	N	4	Total required strength of USAR school unit(s)
UN_PRFACT	N	2	Number of unit(s) authorized property account(s)
AUFL_MNTAD	N	3	Total Number of Authorized Full Time Maintenance Administrative Personnel
TAMSA_VSUP	N	5	Total Number of Actual AMSA Supported Vehicles.
