| 13. ABSTRACT (Maximum 200 words) Because of the growing number of environmental laws and regulations worldwide, the U.S. Army has adopted an environmental compliance program that includes a mechanism to identify compliance problems before they become notices of violation by the U.S. Environmental Protection Agency (USEPA). In 1985, Major Army Commands (MACOMs) were required to begin comprehensive environmental assessments at all installations on a 4-year cycle. In addition, the installations must perform an internal assessment mid-cycle. Since each MACOM was developing a separate assessment system, the Army decided to mandate, through Army Regulation 200-1, one unified assessment mechanism Army-wide. The concept was to combine Federal, Department of Defense, and Army environmental regulations, along with good management practices and risk management issues, into a series of checklists showing not only the legal requirements, but also what specific items or operations to review. In addition, each question or protocol would list a point of contact to help assessors review the protocols as easily as possible. The Environmental Compliance Assessment System (ECAS) manual was developed using existing checklists from the USEPA and private industry. It was tested at several Army installations. The ECAS manual continues to be updated to meet new environmental compliance laws and regulations. | | | | |

FOREWORD

This work was performed for United States Army, Toxic and Hazardous Materials Agency (USATHAMA), under military interdepartmental purchase request number 1651, dated January 1991. Curt Williams (USATHAMA) was the Technical Monitor.

The Work was performed by the Environmental Division (EN) of the U.S. Army Construction Engineering Research Laboratory (USACERL). Dr. Edward Novak is Chief, USACERL-EN, and Catherine Demeroukas and Dr. Diane K. Mann were the Principal Investigators. The technical editor was Gloria J. Wienke, USACERL Information Management Office.

Colonel Everett R. Thomas is Commander and Director of USACERL and Dr. L. R. Shaffer is Technical Director.

NOTICE

This manual is intended as general guidance for personnel at certain United States Army installations. It is not, nor is it intended to be a complete treatise on environmental laws and regulations. Neither the United States Government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information contained herein. For any specific questions or interpretations of the legal references herein, consult appropriate legal counsel.

ENVIRONMENTAL COMPLIANCE ASSESSMENT SYSTEM (ECAS)

ASSESSMENT PROTOCOLS

INTRODUCTION

This manual provides the Environmental Compliance Assessment System (ECAS) protocols required by Army Regulation (AR) 200-1. These environmental assessment protocols are based on Federal environmental regulations and are to be supplemented locally using state and local environmental regulations that are applicable to U.S. Army installations and are more stringent than Federal regulations included in this manual. This manual, with local supplements, is intended to serve as the primary tool in conducting the environmental compliance evaluation phase of the ECAS process. Specifically, this manual:

- 1) Compiles applicable Federal, Department of Defense (DoD), and Army environmental regulations with Army operations and activities
- 2) Synthesizes environmental regulations, good management practices (GMPs), and risk management issues into consistent and easy to use checklists
- 3) Serves as an aid in the evaluation process and management action development phases of the ECAS.

This manual is divided into 17 sections (assessment areas). They are: Clean Air Act; Clean Water Act; Safe Drinking Water Act; Resource Conservation and Recovery Act, Subtitle C; Resource Conservation and Recovery Act, Subtitle D; Resource Conservation and Recovery Act, Subtitle I and POL Management; Comprehensive Environmental Response Compensation and Liability Act / Superfund Amendment and Reauthorization Act; Toxic Substances Control Act; Federal Insecticide, Fungicide, and Rodenticide Act; National Historic Preservation Act and Cultural Resources; Endangered Species Act and Natural Resources; National Environmental Policy Act; Asbestos Management Program; Noise Abatement; Radon Program; Environmental Program Management; Hazardous Materials Management.

The information in this manual applies to all Army installations and facilities in the United States and its territories.

Table of Contents

INTRODUCTORY SECTION

| Title | Page |
|--|--------|
| Environmental Compliance Evaluation Process | vii |
| Pre-visit Questionnaire | ix |
| Finding Summary | xxvii |
| Explanation of Ratings | xxix |
| Using the ECAS Manual | xxxi |
| Manual Format | xxxiii |
| Major Activities/Operations at Army Installations and Related Protocols | xxxv |
| Contact/Location Codes | xxxix |

PROTOCOL SECTION

| Section | Title | Page |
|---------|--|------|
| 1 | Clean Air Act | 1-1 |
| 2 | Clean Water Act | 2-1 |
| 3 | Safe Drinking Water Act | 3-1 |
| 4 | Resource Conservation and Recovery Act, Subtitle C | 4-1 |
| 5 | Resource Conservation and Recovery Act, Subtitle D | 5-1 |
| 6 | Resource Conservation and Recovery Act, Subtitle I and POL Management | 6-1 |
| 7 | Comprehensive Environmental Response Compensation and Liability Act / Superfund Amendment and Reauthorization Act | 7-1 |
| 8 | Toxic Substances Control Act | 8-1 |
| 9 | Federal Insecticide, Fungicide, and Rodenticide Act | 9-1 |
| 10 | National Historic Preservation Act and Cultural Resources | 10-1 |
| 11 | Endangered Species Act and Natural Resources | 11-1 |
| 12 | National Environmental Policy Act | 12-1 |
| 13 | Asbestos Management Program | 13-1 |
| 14 | Noise Abatement | 14-1 |
| 15 | Radon Program | 15-1 |
| 16 | Environmental Program Management | 16-1 |
| 17 | Hazardous Materials Management | 17-1 |

ENVIRONMENTAL COMPLIANCE EVALUATION PROCESS

The ECAS program management process can be divided into three distinct phases:

- Preevaluation activities.
- Site evaluation activities.
- Post evaluation activities.

This manual incorporates the first two phases of the program management process.

Preevaluation Activities - Five key activities should be completed before an evaluation team begins the evaluation activities.

1. **Previsit Questionnaire.** The purpose of the previsit questionnaire is to collect information that will familiarize the evaluation team with the installation and its operations so that they are able to review the applicable regulations and prepare a detailed evaluation schedule. The previsit questionnaire is an essential part of preevaluation activities for an external evaluation. It is also an excellent tool for ensuring internal evaluation team members are starting from the same base of information. Table 1 contains a sample previsit questionnaire.
2. **Define Evaluation Scope and Team Responsibilities.** The installation or major command may wish to place special emphasis on certain protocols or to review additional areas not covered in the manual. These goals must be stated clearly so the evaluation can be planned properly. Additionally, the duration of the evaluation, appointment of team members by the Environmental Quality Control Commission (EQCC), and handling of tenants and off-post sites must be addressed. Finally, responsibilities for each of the protocols must be assigned to team members as appropriate.
3. **Review Relevant Regulations.** Once the evaluation scope and responsibilities are known, the evaluators should undertake a thorough review of relevant federal, state, and local regulations affecting the installation. The applicable environmental regulations must be determined before evaluation begins. If not already available, checklist items for state and local requirements must be added to the checklists in the ECAS manual.
4. **Develop Evaluation Schedule.** The team should develop a detailed evaluation schedule that includes the activities planned for each day.
5. **Review Evaluation Protocols.** Each evaluator should know the regulatory requirements, schedule, and be familiar with the evaluation checklists that will be used.

TABLE 1

ENVIRONMENTAL COMPLIANCE ASSESSMENT SYSTEMS (ECAS)

PREVISIT ENVIRONMENTAL MANAGEMENT QUESTIONNAIRE

This questionnaire will provide background information necessary to plan and conduct an environmental compliance assessment.

MACOM: _____
 Name of Installation: _____
 Environmental POC: _____
 Telephone Number: _____

| | YES | NO | N/A |
|---|-----|----|-----|
| Does the installation want the assessment team to provide the "optional package" of preparing the applicable 1383 exhibits, 4283 work orders, and first page of appropriate 1391's relative to the corrective action plan (Chapter 5 of the Environmental Compliance Assessment System Report of findings)? | — | — | — |

1. Clean Air Act (CAA)

| | | | |
|---|---|---|---|
| 1. Does the installation have any air permits to maintain with state regulatory authority (i.e., boilers, pathological incinerators, paint spray booths, petroleum, oil, and lubricant (POL) tank vents, etc.)? Inclusively, list the types and number of each. | — | — | — |
|---|---|---|---|

| Type of Permit | Quantity |
|----------------|----------|
| _____ | _____ |
| _____ | _____ |

| | | | |
|---|---|---|---|
| 2. Does the installation operate a central heating plant? | — | — | — |
| a. Steam? | — | — | — |
| b. Hot water? | — | — | — |
| c. Coal-fired? | — | — | — |
| d. Oil-fired? | — | — | — |

YES NO N/A

c. Wood chips? _____, _____, _____

f. Other fuel? _____

g. Approximate size of plant(s)? _____, _____, _____

3. Does the installation operate any incinerators? (i.e., for classified documents, solid waste, etc.) Please list type and number.

| Type | Quantity |
|-------|----------|
| _____ | _____ |
| _____ | _____ |
| _____ | _____ |

4. Does the installation engage in burning of Explosive Ordnance Disposal (EOD) materials?

5. Does the installation operate fuel dispensing facilities?

6. Are field fuel dispensing operations and rapid refueling operations performed?

7. Please list number of fuel storage areas and the fuel type.

| Fuel type | Quantity | Fuel type | Quantity |
|-----------|----------|-----------|----------|
| _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ |

8. Does installation operate maintenance shops?

9. Please list any additional shop activities that generate any form of air pollution: (i.e., vehicle emission systems, ventilation systems for various operations)

10. Are any hazardous or toxic air pollutants present in the installation's air emissions (e.g., Beryllium, mercury, and vinyl chloride)?

11. Does the installation have a dry cleaning facility?

12. Does the installation use CFCs or Halons?

YES NO N/A

2. Clean Water Act (CWA)

1. Does the installation have any National Pollutant Discharge Elimination (NPDES) and/or State Pollutant Discharge Elimination (SPDES) permits?

— — —

2. Does the installation have any of the following discharges:

a. Storm water runoff from operational/storage area?

— — —

b. Storm water runoff from undeveloped area?

— — —

c. Dredge and fill solids drainage water?

— — —

d. Wastewater treatment plant effluent?

— — —

e. Process wastewater?

— — —

f. Heat/Power production cooling water?

— — —

g. Storm water runoff from fuel dispensing areas, airfields, and parking lots/aprons?

— — —

h. Vehicle wash facilities? How many? _____

— — —

i. Plating shop?

j. Does the installation maintain sedimentation holding ponds or seepage pits from vehicle/aircraft washing, maintenance shop drainage (shop operations and motor parks), and other activities?

— — —

k. Operate cooling towers?

— — —

l. Septic systems?

m. Other? _____

— — —

3. Does the installation discharge into a Publicly Owned Treatment Works (POTW) any of the following:

a. Process wastewater?

— — —

b. Domestic (sanitary) wastewater?

— — —

| | YES | NO | N/A |
|--|-----|----|-----|
| c. Industrial wastewater treatment plant effluent? | — | — | — |
| d. Other? _____ | — | — | — |
| 4. Does the installation make use of an on-site wastewater treatment system prior to effluent discharge? | — | — | — |
| 5. Does the installation conduct live fire training activities? | — | — | — |
| 3. Safe Drinking Water Act (SDWA) | | | |
| 1. Does the installation operate a public water system? | — | — | — |
| 2. Does the installation maintain wellheads? | — | — | — |
| 3. Does the installation supply water to aircraft? | — | — | — |
| 4. Does the installation operate ice machines? | — | — | — |
| 5. Does the installation operate an underground injection well? | — | — | — |
| 6. Are there groundwater aquifers on the installation? | — | — | — |
| 7. Is the installation located on a sole source aquifer? | — | — | — |
| 4. Resource Conservation and Recovery Act, Subtitle C (RCRA-C) | | | |
| 1. Is the installation a small quantity generator of hazardous wastes? (less than 1,000 kg/month) | — | — | — |
| If so, please specify waste type and treatment method (Attach separate page(s) if necessary). | | | |
| _____ | | | |
| _____ | | | |
| 2. Is the installation a large quantity generator of hazardous wastes? (greater than 1,000 kg/month) | — | — | — |
| If so, please specify waste type and treatment method (Attach separate page(s) if necessary). | | | |
| _____ | | | |
| _____ | | | |
| 3. Does the installation accept wastes from other installations for treatment, storage, or disposal? | — | — | — |

| | YES | NO | N/A |
|---|-----|----|-----|
| 4. Does the installation operate accumulation points or satellite accumulation points? How many?_____ | — | — | — |
| 5. Does the installation operate a medical/pathological waste incinerator? | — | — | — |
| 6. Does the installation treat hazardous waste on site? How and where_____? | — | — | — |
| 7. Does the installation store hazardous waste on site? Where? _____ | — | — | — |
| 8. Does the installation dispose of hazardous waste on site? How and where? _____ | — | — | — |
| 5. Resource Conservation and Recovery Act, Subtitle D (RCRA-D) | | | |
| 1. Does the installation have a solid waste management facility on site? | — | — | — |
| 2. Does the installation have a: | | | |
| a. Resource Recovery facility (DRMO) on the installation? | — | — | — |
| b. Resource Recovery facility (DRMO) off the installation | — | — | — |
| c. Landfill? | — | — | — |
| d. Solid waste recycling program? | — | — | — |
| List commodities recycled (i.e., paper, aluminum, glass, etc.). | | | |
| _____ | | | |
| _____ | | | |
| e. Construction debris landfill? Is it permitted? _____ | — | — | — |
| 3. Is waste transported off-installation for disposal: | | | |
| a. In landfills? | — | — | — |
| b. In incinerators? | — | — | — |
| c. Other (specify):_____ | — | — | — |

| | YES | NO | N/A |
|---|-----|----|-----|
| 4. Does the installation dispose of ash residues or sludge: | | | |
| a. On post? | — | — | — |
| b. Off post? | — | — | — |
| 5. Does the installation receive refuse from outside the United States? | — | — | — |
| 6. Does the installation generate pathological wastes? | — | — | — |

If yes, please explain (Is it permitted? Does it pass inspection by state officials?).

| | | | |
|--|---|---|---|
| 7. Does the installation operate battery shops, to include charging areas within vehicle maintenance facilities? | — | — | — |
| 8. Does the installation have any Solid Waste Management Units (SMUs)? | — | — | — |

If yes, how many? _____

6. Resource Conservation and Recovery Act, Subtitle I (RCRA-I)

| | | | |
|---|---|---|---|
| 1. Does the installation have aircraft fuel storage facilities? | — | — | — |
|---|---|---|---|

If yes, how many USTs are in the aircraft fuel storage facilities and what size are they?

| | | | |
|---|---|---|---|
| 2. Does the installation have ground vehicle fuel storage facilities? | — | — | — |
|---|---|---|---|

If yes, how many USTs are in the ground vehicle fuel storage facilities and what size are they?

YES NO N/A

3. Does the installation operate field Logistic Control Centers (LCC) (i.e., fuel bladders, maintenance operations, potable water generating units, field showers, bakeries, ammunition storage, etc.)? List those that are operated.

— — —

4. Does the installation have an AAFES-operated or other type of gas station?

— — —

If yes, how many USTs are located at the gas station and what size are they?

5. Does the installation have any other USTs used to store petroleum products?

— — —

If yes, list: (Attach a separate sheet if necessary.)

| Location | Quantity | Size |
|----------|----------|------|
| — | — | — |
| — | — | — |
| — | — | — |

6. Does the installation have any USTs used to store hazardous substances?

— — —

If yes, where are they located, how many are there, what size are they, and what hazardous product do they contain?

7. Does the installation have any underground tanks out of service or abandoned?

— — —

| | YES | NO | N/A |
|---|-----|----|-----|
| 8. Does the installation have a Used Solvent Elimination (USE) program? | — | — | — |

Explain: Either recycle service contract, Army-owned recycling equipment, or other type of program?

| | | | |
|---|---|---|---|
| 9. Do all maintenance facilities have solvent cleaning machines? If no, briefly explain how solvent cleaning is being performed. | — | — | — |
|---|---|---|---|

7. Comprehensive Environmental Response, Compensation, and Liability Act/Superfund Amendments and Reauthorization Acts (CERCLA/SARA)

| | | | |
|---|---|---|---|
| 1. Does the installation have an on-going Installation Restoration Program (IRP)? | — | — | — |
|---|---|---|---|

| | | | |
|--|---|---|---|
| 2. Has the installation been a source of any off-site contamination? | — | — | — |
|--|---|---|---|

| | | | |
|--|---|---|---|
| 3. Does the installation have any "unofficial" landfill sites that are no longer in use? | — | — | — |
|--|---|---|---|

8. Toxic Substance Control Act (TSCA)

PCBs

| | | | |
|--|---|---|---|
| 1. Has the installation conducted a survey for PCBs? | — | — | — |
|--|---|---|---|

| | | | |
|--|--|--|--|
| 2. Are PCB (polychlorinated biphenyl) or PCB contaminated oils in use or stored in the installation: | | | |
|--|--|--|--|

| | | | |
|------------------|---|---|---|
| a. Transformers? | — | — | — |
|------------------|---|---|---|

| | | | |
|----------------|---|---|---|
| b. Capacitors? | — | — | — |
|----------------|---|---|---|

| | | | |
|--------------------|---|---|---|
| c. Electromagnets? | — | — | — |
|--------------------|---|---|---|

| | | | |
|--|---|---|---|
| d. Heat Transfer or Hydraulic systems? | — | — | — |
|--|---|---|---|

YES NO N/A

e. Circuit Breakers?

— — —

f. Other? _____

— — —

3. Are there any PCB items in storage for disposal?

— — —

List the number of items by concentration.

Concentration Columns

50-499 ppm

>500 ppm

4. Does the installation dispose of PCBs or PCB items at the installation?

— — —

5. Does the facility transport PCBs?

— — —

9. Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)

1. Does the installation use pesticides in regulated quantities?

— — —

2. Are pesticide wastes disposed of at the installation?

— — —

3. Are pesticides stored on the installation?

— — —

Please list locations:

4. Are medical records kept for individuals involved in the management of pesticides?

— — —

5. Where are pesticides used at the installation?
(Attach a separate list if necessary.)

| | YES | NO | N/A |
|---|-----|----|-----|
| 6. Are pesticides used at off-post satellite facilities? | — | — | — |
| 7. Does the installation maintain a pesticide/entomology shop? If yes, is it permitted by the state? Are personnel certified/current? | — | — | — |

10. Historic Preservation and Cultural Resources

| | | | |
|---|---|---|---|
| 1. Does the installation have an area(s) designated as: | | | |
| a. Cultural resource? | — | — | — |
| b. Archeological resource? | — | — | — |
| c. Historic structure? (National Register) | — | — | — |
| 2. Does the installation Master Plan contain sites of significance? | — | — | — |

11. Endangered Species Act and Natural Resources

| | | | |
|---|---|---|---|
| 1. Does the installation have any outdoor recreation areas? | — | — | — |
| 2. Does the installation have a plan for managing its natural resources? | — | — | — |
| 3. Are there any areas on the installation that have: | | | |
| a. Wetlands? If so, are they permitted/regulated? _____ | — | — | — |
| b. Flood Plains? | — | — | — |
| 4. Does the installation know of any endangered species on its property? | — | — | — |
| 5. Is the information on endangered species incorporated into the installation Master Plan? | — | — | — |

YES NO N/A

12. National Environmental Policy Act (NEPA)

1. Has the installation recently prepared, or is it in the process of preparing, an environmental assessment (EA) or environmental impact statement (EIS)?

— — —

a. For current mission?

— — —

b. For future Master Plan?

— — —

2. Is the Environmental Officer actively involved in project/work order reviews?

— — —

13. Asbestos Management Program

1. Has the installation conducted a complete installation-wide asbestos facility survey?

— — —

2. Does an Asbestos Management Plan exist?

— — —

3. Is maintenance done on items insulated with asbestos?

— — —

4. Has the installation undergone any asbestos removal projects in the past?

— — —

5. Is there any asbestos on the installation that has been removed and is awaiting disposal?

— — —

6. Will the installation have any demolition, remodeling, or renovation projects underway at the time of the ECAS assessment?

— — —

Please identify those projects and buildings:

7. Does the installation have primary or secondary schools? Do they have asbestos?_____

— — —

YES NO N/A

14. Noise Abatement

1. Does the installation have an active runway?
2. Does the installation have any operations or maneuvers that produce environmental noise or noise that goes outside the installation (i.e., ranges, skeet range, helicopter pad, generators, highway transportation)?
3. Does a current ICUZ Management Plan exist?
4. Do any cooperative agreements exist regarding land-use development with bordering communities?
5. Are there any Zone II or Zone III's off the installation?
6. Are noise contour zones reviewed for mission/training changes prior to implementation?

| | | |
|---|---|---|
| — | — | — |
| — | — | — |
| — | — | — |
| — | — | — |
| — | — | — |
| — | — | — |

15. Radon Program

1. Does the installation monitor for radon gas?
2. Does a Radon Reduction Management Plan exist?

| | | |
|---|---|---|
| — | — | — |
| — | — | — |

16. Environmental Program Management

1. Is the installation engaged in any construction, renovation or demolition?
2. Is the installation engaged in any real property transaction?
3. Is there currently an under-staffing problem?

| | | |
|---|---|---|
| — | — | — |
| — | — | — |
| — | — | — |

_____ Total Authorized

_____ Total Recognized

_____ Total Vacancies

_____ Required number of positions needed over and above the TDA authorization.

| | YES | NO | N/A |
|---|-----|----|-----|
| 4. What is the total number of programs currently required to manage the entire environmental program (i.e., Air, Hazardous Waste/Material, Ground Water, Surface Water, Solid Waste, Noise, Training, POL, Archeology, Asbestos, etc.)?_____ | | | |
| 5. Is the Environmental Program Manager an active participant in the budgetary processes of the installation? | — | — | — |
| 6. Does the Environmental Management Program receive Command Support? | — | — | — |
| 7. Does the Environmental Management Office receive adequate support or cooperation from: | | | |
| a. Preventive Medicine Activity? | — | — | — |
| b. Safety Office? | — | — | — |
| c. Inspector General? | — | — | — |
| d. Manpower Survey Activity of Resource Management Directorate? | — | — | — |
| e. Civilian Personnel Office (i.e., Recruitment/Placement and Position Management/Classification)? | — | — | — |
| f. Staff Judge Advocate? | — | — | — |
| g. Directorate of Plans, Training, Mobilization, and Security (Range Control, Aviation, Maintenance)? | — | — | — |
| h. Directorate of Logistics (Maintenance, Supply, and Services)? | — | — | — |
| i. Directorate of Contracting or Procurement? | — | — | — |
| j. Directorate of Engineering and Housing (i.e., DEH, DDEH, O&M Divisions, Engineering Plans and Services etc.)? | — | — | — |
| k. MATES, UTES, ECS, AMSAs, etc.? | — | — | — |
| l. Major garrison military units? | — | — | — |
| m. Transient troop units (i.e., USAR/ARNG, and active Army components special training exercises)? | — | — | — |

| | YES | NO | N/A |
|--|-----|----|-----|
| n. DPCA (Auto Craft, Arts and Craft, Photo Labs, Outdoor Recreation)? | — | — | — |
| o. Other Tenant Activities (i.e., AAFES, ANG, USAF, other)? | — | — | — |
| 8. Is required support being provided to environmental training? List separately: | | | |
| a. Environmental Staff-Professional Development/Staying Current? | — | — | — |
| b. Civilian Staff Personnel (to include within DEH)? | — | — | — |
| c. Military Units/Military Personnel/Unit Commanders? | — | — | — |
| d. Does the Command Staff support environmental training needs? | — | — | — |

17. Hazardous Materials Management

1. Does the installation have flammable/combustible storage rooms located inside or adjacent to buildings (i.e., oils, antifreeze, paint, solvent, fuels)?

— — —

BUILDINGS/NUMBERS

2. Does the installation have outside flammable/combustible storage buildings?

— — —

Near which buildings? _____

3. Does the installation have hazardous materials dispensing areas?

— — —

In or near which buildings? _____

4. Does the installation store/use compressed gases (i.e., oxygen, acetylene, nitrogen, etc.)?

— — —

5. Does the installation have any bulk acid storage?

— — —

6. Does the installation store batteries and/or have a battery reclamation point?

— — —

| | YES | NO | N/A |
|--|-----|----|-----|
|--|-----|----|-----|

| | | | |
|---|---|---|---|
| 7. Does the installation transport hazardous materials on public roads? | — | — | — |
|---|---|---|---|

| | | | |
|---|---|---|---|
| 8. Has the installation had a release of hazardous materials? | — | — | — |
|---|---|---|---|

Site Evaluation Activities - On site, the evaluators will conduct record searches, interviews, and site surveys to determine the compliance status of the installation. Operations are compared with environmental standards and any deficiencies are written up as findings. The data collected should be sufficient, reliable, and relevant to provide a sound basis for evaluation findings and recommendations. An ECAS Finding Summary is available to assist evaluators in compiling needed information during an ECAS evaluation. A Finding Summary should be completed for each finding during the evaluation. These forms comprise the basis of the ECAS report. The format and content for ECAS evaluation reports will be in a separate supplement. Figure 1 shows a blank Finding Summary form. Figure 2 shows a sample completed Finding summary.

All items of the ECAS Finding Summary must be filled in up to *Sampling Results* for negative findings and up to *Criteria* for positive findings. The *CONDITION* is a factual statement describing the status of the process, permit, or situation under investigation, and the *CRITERIA* is the environmental standard (Federal, state, local, DoD, Army, Good Management Practice) the installation is being measured against. A condition may be positive if the installation is going above and beyond the requirements. *SUGGESTED SOLUTIONS* is an optional entry, and may include easily identifiable solutions to the deficiency. *COMMENTS* may include any corrective actions already taken or scheduled, or any other appropriate information pertaining to the finding.

For example, a team member assigned to evaluate the installation's hazardous waste management program visited the accumulation point at building 5000. The evaluator noticed some drums were damaged and took a count of the total number of drums and the number of damaged drums to get an accurate description for the finding. Five of the 25 drums were rusted and bulging. Item 4-43 in the ECAS manual states that 40 CFR 262.34, Subpart C requires containers to be tightly sealed and not leaking, bulging, rusting, or badly dented. The damaged drums were behind the others, so the accumulation point manager may have overlooked them during his regular inspections. The accumulation point manager immediately put overpack drums on order. The evaluator is now ready to fill out a Finding Summary.

SUGGESTED SOLUTION(S):

Overpack drums that are in bad condition.

OPTIONAL ENTRIES

COMMENTS:

The accumulation point manager put overpack
drums on order immediately.

Explanation of Ratings

Deficiencies noted on the Finding Summary are rated as follows:

Significant: A problem categorized as significant requires immediate attention. It poses, or has a high likelihood to pose, a direct and immediate threat to human health, safety, the environment, or the installation mission. A leaking PCB transformer that is located next to a dining facility, for example, would likely be a significant deficiency.

Major: A major deficiency requires action, but not necessarily immediate action. Major deficiencies may pose a threat to human health, safety, or the environment. Any immediate threat, however, must be categorized as significant.

Minor: Minor deficiencies are usually administrative in nature, even though those findings might possibly result in a notice of violation. This category may also include temporary or occasional instances of noncompliance.

Management Practice: Management practice items are those for which there is no specific regulatory requirement.

Using the ECAS Manual

THE PROTOCOLS

Army installations engage in many operations and activities that can cause environmental impacts on public health and the environment if not controlled or properly managed. Many of these activities and operations are regulated by Federal, state, and local regulations, and by DoD and Army directives.

After a review of these activities at Army installations, it is apparent that there are major categories of environmental compliance into which most environmental regulations and Army activities could be grouped. This manual is divided into 17 sections that correspond to environmental acts as well as major compliance categories.

- 1 Clean Air Act
- 2 Clean Water Act
- 3 Safe Drinking Water Act
- 4 Resource Conservation and Recovery Act, Subtitle C
- 5 Resource Conservation and Recovery Act, Subtitle D
- 6 Resource Conservation and Recovery Act, Subtitle I and POL Management
- 7 Comprehensive Environmental Response Compensation and Liability Act / Superfund Amendment and Reauthorization Act
- 8 Toxic Substances Control Act
- 9 Federal Insecticide, Fungicide, and Rodenticide Act
- 10 National Historic Preservation Act and Cultural Resources
- 11 Endangered Species Act and Natural Resources
- 12 Natural Environmental Policy Act
- 13 Asbestos Management Program
- 14 Noise Abatement
- 15 Radon Program
- 16 Environmental Program Management
- 17 Hazardous Materials Management.

Each section is organized in the following format:

A. Applicability

This section provides guidance on the major activities and operations included in the protocol and a brief description of the major application.

B. Federal Legislation

This section of each protocol identifies, in summary form, the key regulatory issues associated with the compliance area in the Federal law.

C. State/Local Requirements

This section of each protocol identifies the "typical" compliance areas normally addressed in state and local regulations. This section does not present individual state/local requirements. An assessment of state and local requirements must be conducted and supplemental questions prepared to cover these requirements. The manual is prepared in loose leaf form to allow state and local requirements to be easily inserted.

D. DoD Regulations

This section of the protocol identifies the relevant directives or requirements associated with the compliance area that are promulgated by DoD.

E. U.S. Army Regulations

This section identifies those Army regulations that address requirements associated with the specific compliance category.

F. Key Compliance Requirements

This section of each protocol summarizes the significant compliance requirements associated with the regulations previously identified. It is a brief abstract summarizing the overall thrust of the regulations for that particular compliance category.

G. Responsibility for Compliance

This section identifies and summarizes the individual organizations at an Army installation with responsibility for maintenance, operation, or environmental monitoring of activities associated with the compliance category.

H. Key Compliance Definitions

This section of each protocol presents definitions for those key terms associated with each compliance category.

I. Compliance Assessment Mechanism

The final section of each protocol and its tables and figures contain evaluation procedures (checklists) composed of requirements or guidelines that serve as indicators to point out possible compliance problems, as well as practices, conditions, and situations that could indicate potential problems. They are intended to focus attention on the key compliance questions and issues that should be investigated. Instructions are provided to direct the evaluator to the appropriate action, references, or activity that corresponds to the specific requirement or guideline.

MANUAL FORMAT

The protocol portion of ECAS is divided into two columns. The first of these is a statement of a requirement. This may be a strict regulatory requirement, in which case the citation is given, or it may be a requirement that is considered to be a good management practice to maintain compliance, but which is not specifically mandated by regulation.

The second column gives instructions to help conduct the compliance evaluation. These instructions are intended to be specific action items that should be accomplished by the investigator. Some of the instructions may be a simple documentation check taking a few minutes; others may require physical inspection of a facility. Contact/location information in parentheses is intended to give guidance on the to a legend at the bottom of the worksheet.

At the end of each section is an assessment worksheet. This worksheet should be reproduced and used during the assessment to take notes. It is designed to be inserted between each page of the protocols, allowing the main text to be kept usable for the next assessment. The worksheet is divided into two columns. The first column is a quick check for those items that are in compliance (C), not applicable (N/A) to the facility being reviewed, or require management action (RMA).

The second column on the worksheet allows for more detailed notations or comments. These notations will provide a record for use in preparing the final report. These notations should include both situations of substandard operation needing attention and those operations that are above requirements or provide examples of good programs. For future reference and clarity it is essential that the building number (or other reference to location) be made during the review.

The evaluation procedures are designed as an aid and should not be considered exhaustive. Use of the guide requires the evaluator's judgement to play a role in determining the focus and extent of further investigation. A review of appropriate state regulations should be conducted so additional review questions that reflect the substantive requirements of state/local regulations pertinent to individual installations can be included on the worksheets.

SUPPLEMENTAL INFORMATION

A "logic table" (Table 2) is located at the end of this section. It indicates the major environmental operations and activities at typical Army installations and the protocols within which they are addressed. As shown, many activities and operations cause environmental impacts in more than one area, and are therefore addressed in more than one protocol.

Any findings discovered through the use of this guidance manual by the internal assessment must be validated by the environmental coordinator and Judge Advocate. The findings and corrective actions must be recorded in the Environmental Quality Control Committee minutes.

Any change or suggestion for improving this guidance manual should be forwarded to USATHAMA, (CETHA-EC-A) Aberdeen Proving Ground, MD. 21010-5401.

Section 1

CLEAN AIR ACT (CAA)

SECTION 1

CLEAN AIR ACT (CAA)

A. Applicability of this Protocol

This protocol includes regulations, responsibilities, and compliance requirements associated with air pollution emissions at Army installations. The major air pollution emissions and sources at Army installations are:

- Particulates, sulfur dioxide (SO₂), and nitrogen oxide (NO_x), and carbon monoxide (CO) from fuel burning at steam and hot water generation plants and boilers.
- Particulate emissions from the operation of classified material and medical, pathological, and/or infectious waste incinerators.
- Particulate and carbon monoxide emissions from open burning and open detonation operations.
- Carbon monoxide emissions from mobile (vehicular) sources.
- The emission of volatile organic compound (VOC) vapors from the storage and transfer of certain petroleum fuels and chemicals (solvents), and the operation of incinerators, solvent use, degreasing/metal cleaning, sterilizing, and other processes (paint stripping and metal finishing) that use solvents.
- Fugitive particulate emissions from training activities and construction/ demolition operations.

Most Army installations have air emissions sources in each of these six categories. Therefore this protocol is applicable to some extent at all Army installations.

B. Federal Legislation

The Clean Air Act (CAA), [42 USC 7401-7642 Public Law 88-206 as amended], is the basic Federal enabling legislation governing air pollution. The implementing United States Environmental Protection Agency (USEPA) regulations are contained in 40 CFR 50 through 87. Those sections applicable to Army installations, or directly affecting state regulations, which in turn affect Army installations, are contained in:

- 40 CFR 50, *Primary and Secondary National Ambient Air Quality Standards.*
- 40 CFR 60, *New Source Performance Standards.*
- 40 CFR 61, *National Emission Standards for Hazardous Air Pollutants.*
- 40 CFR 80, *Regulation of Fuel and Fuel Additives.*

The Federal regulations provide a framework within which states design specific regulatory strategies to deal with air pollution problems within their boundaries. Much of what the USEPA defines as Reasonably Available Control Technology (RACT) may be found in state programs, but the requirement of a specific RACT will depend on the existence of an air pollutant problem in the state. In addition, RACT often includes two or more levels of control, depending on the seriousness of the nonattainment.

The Clean Air Act requires USEPA to establish three types of national standards: National Ambient Air Quality Standards, New Source Performance Standards, and National Emission Standards for Hazardous Air Pollutants.

National Ambient Air Quality Standards (NAAQS) establish the allowable ambient concentrations for six priority pollutants:

- Total Suspended Particulates
- Sulfur Dioxide
- Nitrogen Dioxide
- Carbon Monoxide
- Ozone
- Lead.

NAAQS apply to pollutant concentrations in ambient air, and are not applicable to individual emission sources. For this reason, compliance with these standards is not an issue directly addressed during an environmental review. The Clean Air Act, however, mandates that states develop State Implementation Plans (SIPs), which set forth regulations on emissions from stationary and mobile sources necessary to achieve and maintain the NAAQS.

Statutory provisions exist concerning the construction and modification of stationary sources in areas where air quality is cleaner than that required by NAAQS. These provisions are intended to prevent significant air quality degradation in these areas. The "prevention of significant deterioration" (PSD) regulations establish strict preconstruction guidelines and monitoring requirements. For construction/ modification of sources in nonattainment areas (NAA), where

one or more NAAQS are not met, there are similar strict regulations for preconstruction review, emission control systems, and monitoring.

New Source Performance Standards (NSPS) were developed for specific industrial categories to provide a ceiling for emissions from new sources (See Appendix 1-4). They are based on application of the best technology to reduce emissions. These standards include requirements for notification, recordkeeping, performance tests, maintenance, and monitoring.

National Emission Standards for Hazardous Air Pollutants (NESHAPS) were established for air pollutants for which no ambient air quality standards are applicable and which may result in an increase in mortality or serious irreversible illness. These standards define emission limits, monitoring requirements, restrictions on material use, worker practice standards, and reporting requirements for hazardous pollutants. Facilities emitting the following pollutants must comply:

- Asbestos
- Beryllium
- Mercury
- Vinyl Chloride
- Coke oven emissions
- Benzene
- Radionuclides
- Inorganic arsenic.

NOTE: Requirements pertaining to asbestos can be found in Section 13, *Asbestos Abatement*.

Section 118 of the CAA [42 USC 7418] governs *Control of Pollution from Federal Facilities*, and contains as broad a waiver of sovereign immunity, both substantively and procedurally, as found in any of the environmental statutes. Specifically, "[Federal facilities] shall be subject to, and comply with, all Federal, state, interstate, and local requirements ... respecting ... air pollution in the same manner, and to the same extent as any nongovernmental entity."

Section 118(b) provides for two exemptions for Federal facilities: The president may:

- (1) exempt a Federal facility from compliance, and
- (2) issue regulations exempting Armed Forces weaponry, equipment, etc., "uniquely military in nature."

Both exemptions are subject to the President's determination that such action is "in the paramount interest of the United States to do so." The first exemption is for 1 year, renewable annually; the second exemption is subject to

Presidential reconsideration at 3-year intervals.

Three other sections of the CAA are applicable to Federal facilities:

(1) Section 176(c) prohibits Federal agencies from engaging in, supporting, providing financial assistance for, licensing, permitting, or approving any activity that does not conform to a State Implementation Plan (SIP)

(2) Section 304(a) allows for citizen suits against Federal facilities (and others) and

(3) Section 306 prohibits Federal agencies from contracting with anyone convicted of violating the CAA in certain situations.

The Clean Air Act Amendments of 1990 are the basis of future regulations concerning air quality that will implement additional requirements which will apply to Federal facilities. Some of these changes include a redefining of hazardous air pollutants, the development of the concept of Maximum Achievable Control Technology (MACT), the redesign of air quality control regions, and the regulation of mobile sources.

C. State/Local Requirements

The primary mechanisms regulating air pollutant emissions are the state or air quality control region (AQCR) regulations. These regulations will normally follow the Federal guideline for state programs and will have many similar features. However, depending on the type and degree of air pollutant problems within the state/ region, the individual regulations will vary. As an example, photochemical oxidant (ozone) problems are widespread in California and, therefore, the individual AQCRs in that state have stringent VOC emission requirements. North Dakota has no such problem and, therefore, has fewer and less stringent VOC regulations.

New source performance standards (NSPS) are established for particular pollutants in industrial categories based on adequately demonstrated control technology. Many states have been delegated the authority to enforce NSPS. When a state has not been delegated the authority, the USEPA enforces NSPS in that state. Waivers from NSPS for up to 7 years may be obtained, the purpose of which is to encourage use of innovative technological systems.

The states usually exercise their authority via a permit system. A permit is normally required for new, expanded, or modified sources of air pollutants. Some state regulations apply directly to some facilities and operations without requiring a permit. At a minimum, state regulations should be reviewed for the following activities:

- fugitive dust emissions
- control of particulate emissions from woodworking shops and the transportation of refuse or materials in open vehicles
- certification requirements for boiler operators
- emissions and emission control requirements for the operation of existing fossil fuel-fired steam generators
- open burning and detonation activities
- vehicle exhaust emissions testing
- spray painting of vehicles, buildings, and/or furniture
- certification of vehicles transporting VOC liquids
- paving of roads and parking lots
- toxic air pollutants
- operation of cold cleaners, degreasers, and open top vapor degreasers
- vapor control requirements for gasoline pumps.

D. DoD Regulations

- DoD Instruction 4120.14, *Environmental Pollution Prevention, Control, and Abatement*, implements within DoD policies provided by Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, and Office of Management and Budget (OMB) Circular A-106 and establishes policies for developing and submitting plans for installing improvements needed to abate air emissions from DoD facilities.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 4, *Air Pollution Abatement Program*, sets forth policy and procedures for controlling pollutant emissions into the air. This regulation mandates compliance with all Federal, state, and local regulations, including State Implementation Programs.

F. Key Compliance Requirements

- New Source Performance Standards (NSPS) - Federally established emission standards (contained in a permit) are applicable to new, stationary sources modified or built after the NSPS went into effect. There are almost 50 specific

industrial facilities/ operations for which NSPS have been developed, but only 11 might apply to Army installations. They are:

- fossil fuel-fired steam generators (greater than 100/million British thermal units per hour (MBtu/hr) but less than 250 MBtu/hr)
- fossil fuel-fired steam generators (greater than 250 MBtu/hr)
- electric utility steam generating units (greater than 73 megawatts[MW])
- incinerators (greater than 50 tons/day)
- petroleum liquids storage tanks (greater than 40,000 gallons capacity)
- sewage sludge incinerators (greater than 2,205 pounds per day)
- stationary gas turbines (greater than 1 MBtu/hr)
- bulk gasoline terminals
- municipal waste combustors
- sulfuric and nitric acid plants
- rotogravure printers.

Appendix 1-1 presents some of the key performance standards applicable to sources typically found at Army installations.

- Hazardous Air Pollutants - National Emissions Standards for Hazardous Air Pollutants (NESHAP) are based on health effects with strong reliance on technological capabilities. They apply to both existing and new stationary sources. The NESHAP program can be delegated to any qualifying state. The four substances on the NESHAP list for which there are effective NESHAP regulations currently include: beryllium, asbestos, mercury, and vinyl chloride. Only Army installations involved in demolition or renovation of buildings containing asbestos are likely to be affected by NESHAP regulations. See Section 13, *Asbestos Abatement*.
- Vehicular Emission Inspections - Many states require owners of fleet vehicles to have annual inspections of exhaust gases to determine emissions of CO and hydrocarbons. Army installations typically have many of vehicles and may be required to comply with these regulations.
- VOC Emissions Compliance - Most states regulate the emission of VOCs into the atmosphere. Typical facilities at Army installations that emit VOCs are JP-4 and MOGAS in storage tanks, solvent cleaners and degreasers, plating operations, gasoline dispensing facilities, and drycleaning facilities. Emissions limitations will vary from state to state and are usually expressed in pounds of VOC/ unit volume of substance used.
- Particulate Emission Compliance - Particulates emitted from fuel burning equipment and incinerators on Army installations are typically regulated on the state

level through individual permits. Limitations are normally expressed as pounds of particulate/ million Btu of heat input.

Many states vary particulate emission limitations depending on the regional air quality conditions with the state. In addition, visible emissions are regulated to opacity levels in percent, e.g., 20 percent opacity. Higher levels of visible emissions (opacity) are normally permitted during certain start-up and maintenance operations for short periods of time (5 minutes/hour).

- **Permits to Operate Air Contaminant Sources** - Army installations must obtain permits from the appropriate state agency to operate any source of air contaminants. Typically, exemptions from the permit requirement are made for fuel burners with less than 1 million Btu/ hour input capacity and for tanks of less than 500 gallons. Permits to operate will vary among facilities and may require the installation of monitoring devices. Also, the operator is required to maintain certain records, reports, and information as stipulated in the individual permits.
- **Sulfur Dioxide Emission Compliance** - Sources burning fuel containing sulfur are typically limited to an allowable emission rate in pounds of sulfur dioxide/ hour (SO_x /MBtu). Individual permits will specify these limitations. Testing, monitoring, and sampling data must be retained and available for inspection. In addition, many states regulate the sulfur content of fuel oil used by Army installations. Typically, sulfur content is limited to 1 to 2 percent.

G. Responsibility for Compliance

- The Installation Commander is the person responsible for compliance and signs all permits.
- The Directorate of Engineering and Housing (DEH) is responsible for the maintenance of incinerators, fuel handling, and storage equipment, as well as the operation and maintenance of all fuel burners. The heating/boiler plant fuel burners are the responsibility of the Operations and Maintenance Division.
- The Environmental Coordinator (EC) is responsible for the preparation of all air pollution emission source permit applications.
- The Hospital or Installation Clinic is responsible for the operation of any medical/pathological incinerators located in their facility.
- The Fuels Management Branch of the Directorate of Logistics (DOL) is responsible for the operation of all fuel handling, transportation (tanks and/or pipelines), and storage facilities on the installation. The branch is also responsible

for ensuring that all fuels satisfy specifications, including state mandated sulfur content. The branch is also responsible for the operation of the military service station that dispenses leaded or unleaded fuel.

- The Vehicle Maintenance Branch of the Director of Logistics (DOL) is responsible for the emission testing and vehicle maintenance required by state and Army regulations.
- The various maintenance facilities at the installation are responsible for the operation of degreasers and other industrial processes that are regulated or may require operating permits.
- The Army/Air Force Exchange System (AAFES) operates a service station that dispenses leaded fuels and is subject to the Federal requirements. The service station is normally operated by a contractor, but the labeling and nozzle size regulations still apply. The Government is responsible for compliance, but the contractor may also be responsible, depending on the contract wording.
- The DEH, Environmental Management Division, is responsible for monitoring the ambient air quality and preparing the installation air emission inventory.

H. Key Compliance Definitions

These definitions were obtained from the various Federal, DoD, and U.S. Army regulations listed previously.

- *Benzene Service* - a piece of equipment that either contains or contacts a fluid (liquid or gas) that is at least 10 percent benzene by weight.
- *Bulk Gasoline Terminal* - any gasoline facility that receives gasoline by pipeline, ship, or barge, and has throughout a greater than 75,000 gallons per day.
- *Bulk Gasoline Plant* - any gasoline distribution facility that has a throughput less than or equal to 75,000 gallons per day.
- *Calculated Level* - means the level of production, exports, or imports of controlled substances determined by each group of controlled substances by: (1) multiplying the amount in kilograms of production, exports, or imports of a substance by that substance's ozone depletion weight listed in 40 CFR 82 Appendix A; and (2) adding together the resulting products for the controlled substances within each group.

- **Cartridge Filter** - a discrete filter unit containing both filter paper and activated carbon that traps and removes contaminants from petroleum solvent, together with the piping and ductwork used in installing this device.
- **Class I Areas** - areas of special national concern (including certain national parks and wilderness areas), where the need to prevent significant deterioration in air quality is the greatest.
- **Class II Areas** - all areas not specifically designated by the Clean Air Act to be Class I areas (these allow for a moderate degree of emissions growth).
- **Class III Areas** - areas originally designated as Class II areas, that have been redesignated by states where higher levels of industrial development and emissions growth are desired.
- **Closed-vent System** - a system that is not open to the atmosphere and is composed of piping, connections, and, if necessary, flow inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device.
- **Coal Refuse** - any waste products of coal mining, cleaning, and coal preparation operations (e.g., culm, gob, etc.) containing coal, matrix material, clay, and other organic and inorganic material.
- **Cofired Combustor** - a unit burning municipal-type solid waste or refuse derived fuel with a nonmunicipal solid waste fuel and is subject to a Federally enforceable permit limiting the unit to combusting a fuel feed stream, 30 percent or less of the weight of which is comprised, in aggregate, of municipal-type solid waste or refuse derived-fuel as measured on a 24-hour basis.
- **Commercial/Retail Waste** - material discarded by stores, offices, restaurants, warehouses, nonmanufacturing activities at industrial facilities, and other similar establishments or facilities.
- **Consumption Allowances** - means the privileges granted in 40 CFR 82 to produce and import calculated levels of controlled substances, however, consumption allowances (40 CFR 82.7, 82.8, 82.10, and 82.12) must still be observed.
- **Distillate Oils** - those liquid fractions of petroleum (light oil, e.g., No. 1 fuel oil, No. 2 fuel oil, diesel, kerosene) that are normally derived by vaporization and condensation of petroleum remaining after gasoline and fractions more volatile than gasoline have been removed.

- **Dryer** - a machine used to remove petroleum solvent from articles of clothing or other textile or leather goods, after washing and removing excess petroleum solvent, together with the piping and ductwork used in the installation of this device.
- **Electric Utility Steam Generating Unit** - any steam electric generating unit that is constructed for the purpose of supplying more than 1/3 of its potential electric output capacity and more than 25 MW electrical output to any utility power distribution system for sale.
- **Export** - is the transport of controlled substances manufactured from raw materials or feedstock chemicals from within the United States or its territories to persons or countries outside the United States or its territories, excluding United States Military installations and ships for on-board use.
- **Federally Enforceable** - all limitations and conditions enforceable by the Administrator, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within any applicable state implementation plan, and any permit requirements established pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51, Subpart I, including operating permits issued under a USEPA-approved program that is incorporated into the state implementation plan and that expressly requires adherence to any permit issued under such program.
- **Fossil Fuel** - natural gas, petroleum, coal, and any form of solid, liquid, or gaseous fuel derived from such materials for the purpose of creating useful heat.
- **Fossil Fuel-Fired Steam Generating Unit** - a furnace or boiler used in the process of burning fossil fuel for the purpose of producing steam by heat transfer.
- **Fossil Fuel and Wood Residue Steam Generating Unit** - a furnace or boiler used in the process of burning fossil fuel and wood residue for the purpose of producing steam by heat transfer.
- **Fuel Burning Equipment** - equipment whose primary purpose is the production of energy or power from the combustion of any fuel. The equipment is generally used for, but not limited to, heating water, generating or circulating steam, heating air (as in a warm air furnace), and furnishing process heat by transferring energy by fluids or through process vessel walls.
- **Fugitive Emissions** - air pollutants entering into the atmosphere from other than a stack. Example: vapors, dust, fumes. **Gasoline Carrier** - any distributor who transports or stores, or causes the transportation or storage of gasoline without taking title to or otherwise having any ownership of the gasoline, and without altering either the quality or quantity of the gasoline.

- ***Gasoline Distributor*** - any person who transports or stores, or causes the transportation or storage of gasoline at any point between any gasoline refinery or importer's facility and any retail outlet or wholesale purchaser consumer facility.
- ***Good Management Practice (GMP)*** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- ***Household Waste*** - includes material discarded by single and multiple residential dwellings, hotels, motels, and other similar permanent or temporary housing.
- ***Import*** - is the transport of virgin, used, and recycled controlled substances from outside the United States and its territories to persons within the United States or its territories.
- ***Incinerator*** - any furnace used in the process of burning solid waste for the purpose of reducing the volume of the waste by removing combustible matter.
- ***Institutional Waste*** - includes materials discarded by hospitals, schools, non-manufacturing activities at prisons, and government facilities.
- ***Lignite*** - coal that is classified as lignite A or B according to the American Society for Testing and Materials (ASTM) Standards.
- ***Major Stationary Source*** - any stationary source of air pollution that emits or has the potential to emit 100 tons per year of any regulated pollutant.
- ***Maximum Heat Input Capacity of a Steam Generating Unit*** - is determined by operating the facility at maximum capacity for 24 hours and using the heat loss method described in Sections 5 and 7.3 of the American Society of Mechanical Engineers (ASME) *Power Test Codes* 4.1 (see 40 CFR 60.17(h)) no later than 180 days after initial startup of the facility and within 60 days after reaching maximum production rate at which the facility will be operated.
- ***Medical Waste*** - when defined as applicable to municipal waste combustors, it is any solid waste generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in production or testing of biologicals. Medical waste does not include any hazardous waste identified under RCRA-C or any household waste as defined in RCRA-C.
- ***Municipal Solid Waste*** - household, commercial/retail, and/or institutional waste. Household, commercial/retail, and institutional wastes do not include sewage, wood pallets, construction and demolition wastes, or industrial process or manufacturing wastes. Municipal solid waste does include motor vehicle maintenance materials, limited to vehicle batteries, used motor oil, and tires.

Municipal solid waste does not include wastes that are solely segregated medical wastes, but any mixture of segregated medical wastes and other wastes that contains more than 30 percent medical waste considered municipal solid waste.

- ***Municipal Waste Combustor*** - any device that combusts solid, liquid, or gasified municipal solid waste including, but not limited to, field-erected incinerators, modular incinerators, boilers, furnaces, and gasification/combustion units. This does not include combustion units, engines, or other devices that combust landfill gases collected by landfill gas collection systems.
- ***Nitric Acid Production Unit*** - any facility producing nitric acid which is 30 to 70 percent in strength by either the pressure or atmospheric pressure process.
- ***Nitrogen Content*** - shall be determined using ASTM Method D3431-80, Test Method for Trace Nitrogen in Liquid Petroleum Hydrocarbons (IBR - see 40 CFR 60.17) or fuel suppliers. If residual oil blends are used, fuel nitrogen specifications may be prorated based on the ratio of residual oils of different nitrogen content in the fuel blend.
- ***Opacity*** - that property of a substance tending to obscure vision; is measured in terms of percent opacity.
- ***Particulate Matter*** - any material except uncombined water that exists in a finely divided form as a liquid or solid at standard conditions.
- ***Petroleum Drycleaner*** - a drycleaning facility that uses petroleum solvent in a combination of washers, dryers, filters, stills, and settling tanks.
- ***Publication Rotogravure Printing*** - any number of rotogravure printing units capable of printing simultaneously on the same continuous web or substrate and includes any associated device for continuous cutting and folding the printed web, where the following sellable paper products are printed: catalogues; direct mail advertisements; display advertisements; magazines; miscellaneous advertisements including brochures, pamphlets, catalogue sheets, circular folders, and announcements; newspapers; periodicals; and telephone and other directories.
- ***Reasonably Available Control Technology (RACT)*** - devices, systems, process modifications, or other technologies that will permit a reduction in air pollution emissions.
- ***Refuse Derived Fuel*** - combustible or organic portion of municipal waste that has been separated out and processed for use as fuel.

- **Reid Vapor Pressure** - the absolute vapor pressure of volatile crude oil and volatile nonviscous petroleum liquids except liquefied petroleum gases as determined by the ASTM, Part 17, 1973, D-323-72 (reapproved 1977).
- **Residual Oils** - liquid or semi-liquid fractions of petroleum (heavy oil, e.g., No. 4, 5, or 6 fuel oil or Bunker C) remaining after distillate oils and fractions more volatile than distillate oils have been removed.
- **Solid Waste** - garbage, refuse, sludge, and other solid, liquid, semisolid or contained gaseous material that is discarded, has served its intended purpose, or is a mining or manufacturing byproduct. For the purposes of this protocol, the definition includes all waste materials not defined by regulation to be either hazardous or toxic, and which are normally disposed of by landfilling, incineration, or are recycled or recovered. Demolition wastes are not included in the Federal definition of a solid waste.
- **Solvent** - organic materials that are liquid at standard conditions and are used as dissolvers, viscosity reducers, or cleaning agents.
- **Stationary Gas Turbines** - any simple cycle gas turbine, regenerative cycle gas turbine, or any gas turbine portion of a combined cycle steam/electric generating system that is not self-propelled. It may be mounted on a vehicle for portability.
- **Steam Generating Unit** - any furnace, boiler, or other device used for combusting fuel for the purpose of producing steam (including fossil fuel-fired steam generators associated with combined cycle gas turbines; nuclear steam generators are not included).
- **Sulfur Oxides** - sulfur dioxide, sulfur trioxide, their acids, and the salts of their acids.
- **Sulfuric Acid Production Unit** - any facility producing sulfuric acids by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans, or acid sludge, but does not include facilities where conversion to sulfuric acid is used primarily as a means of preventing emissions to the atmosphere of sulfur dioxide or other sulfur compounds.
- **Suspended Particulate** - any material, except water in uncombined form, that is or has been airborne.
- **True Vapor Pressure** - the equilibrium partial pressure exerted by a petroleum liquid as determined in accordance with methods described in American Petroleum Institute Bulletin 2517, "Evaporation Loss From Floating Roof Tanks," 1962.

- **Very Low Sulfur Oil** - an oil that contains no more than 0.5 weight percent sulfur or that, when combusted without sulfur dioxide emission control, has a sulfur dioxide emission rate equal to or less than 0.5 lb/M Btu heat input.
- **VHAP Service** - a piece of equipment that either contains or contacts a fluid (liquid or gas) that is at least 10 percent by weight a volatile hazardous air pollutant (VHAP).
- **VOC Service** - in relationship to fugitive emissions, this is when a piece of equipment contains or contacts a process fluid that is at least 10 percent VOC by weight.
- **Volatile Hazardous Air Pollutant (VHAP)** - a substance regulated under 40 CFR 61; Subpart V for which a standard for equipment leaks of the substance has been proposed and promulgated. Benzene and vinyl chloride are VHAPs.
- **Volatile Organic Compound (VOC)** - in general it is any organic compound that particulates in atmospheric photochemical reactions. Under NSPS it is defined as having a vapor pressure of 0.75 pounds per square inch absolute (77.6 mm Hg) or greater (some states use 0.50 pounds per square inch) under actual storage conditions, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. Most commonly found in solvents.

(Note: Within PSD and nonattainment regulations, VOCs also exclude: methane, ethane, methylene chloride, 1,1,1-trichloroethane, trichlorotrifluoroethane (CFC-113), trichlorotrifluoromethane (CFC-11), dichlorodifluoromethane (CFC-12), chlorodifluoromethane (CFC-22), trifluoromethane (FC-23), dichlorotetrafluoroethane (CFC-114), chloropentafluoroethane (CFC-115), dichlorotrifluoroethane (HCFC-123), tetrafluoroethane (HFC-134a), dichlorofluoroethane (HCFC-141b), chlorodifluoroethane (HCFC-142b).)

- **Volatile Organic Liquids (VOL)** - any organic liquid that can emit volatile organic compounds into the atmosphere except those VOLs that emit only compounds that the Administrator has determined do not contribute appreciably to the formation of ozone.

CLEAN AIR ACT (CAA)

Records to Review

- State and local air pollution control regulations
- Agency air pollution control regulations
- Emissions inventory (OMB Form 158-R75)
- All air pollution source permits
- Plans and procedures applicable to air pollution control
- Emission monitoring records and sampling data
- Opacity records
- Notifications of violations to regulatory authorities
- Instrument calibration and maintenance records
- Reports/complaints concerning air quality
- State and/or Federal regulatory inspections, inquiries, or other communications
- Regulatory inspection reports
- Documentation of preventive measure or action
- Results of air sampling at the conclusion of response action
- Emergency episode plan if required by the state
- Military Construction Army (MCA) development and construction plans for new facilities proposed and copies of air pollution abatement plans for these as well as existing sources requiring control. Mobile source data, number of vehicles, and traffic counts for major thoroughfares if available

Physical Features to Inspect

- All air pollution sources (fuel burners, incinerators, VOC sources, etc.)
- Air pollution monitoring and control devices
- Air emission stacks
- Air intake vents

People to Interview

- Director of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Preventive Medicine
- Safety and Health Officer
- Fire Department
- Director of Logistics (DOL)
- Chief of Operations and Maintenance (O&M)
- Army and Air Force Exchange Service (AAFES)

REQUIREMENTS:**

1-11. As of August 12, 1991, municipal waste combustors with a capacity greater than 225 megagrams per day (250 tons per day) of municipal solid waste or refuse-derived fuel which started construction or modification after December 20, 1989 are required to meet specific operational standards (40 CFR 60.50a through 58a).

...

REVIEWER CHECKS:

(NOTE: Exempted from these requirements are: (1)(2)

- affected facilities that combust tires or fuel derived solely from tires and do not combust any other municipal solid waste or refuse derived fuel
- cofired combustors
- cofired combustors that are subject to a Federally enforceable permit limiting the operation of the combustor to no more than 225 megagrams per day (250 tons) of municipal solid waste or refuse derived fuel
- municipal waste combustors only combusting medical waste.)

Verify that gases are not discharged that contain the following constituents in excess of the least stringent amount listed: (1)(2)

- dioxin/furan in excess of 30 nanograms per dry standard cubic meters (12 grains per billion dry standard cubic feet), corrected to 7 percent oxygen (dry basis)
- sulfur dioxide in excess of 20 percent of the potential sulfur dioxide emission rate or 30 ppm by volume, corrected to 7 percent oxygen
- hydrogen chloride in excess of 5 percent of the potential hydrogen chloride emission rate (95 percent reduction by weight or volume), or 25 ppm by volume, corrected to 7 percent oxygen (dry basis)
- nitrogen oxides emissions in excess of 180 ppm by volume corrected to 7 percent oxygen (dry basis).

Verify that facilities meet the operating standards for carbon monoxide emissions outlined in Appendix 1-6. (1)(2)

Verify that the following operating practices are implemented: (1)(2)

- facilities do not operate at a load level greater than 110 percent of the maximum demonstrated municipal waste combustor unit load
- facilities do not operate at a temperature exceeding 17 degrees C above the maximum demonstrated particulate matter control device temperature.

Verify that actions are being taken to ensure that by February 11, 1993 or within 24 months after the start-up of operation (whichever is later) each chief facility operator and shift supervisor is certified. (1)(2)

REVIEWER CHECKS:

1-20. Bulk gasoline terminals with greater than 75,000 gallons gasoline throughput per day that deliver liquid product into greater tank trucks and that started construction or modification after December 17, 1980 are required to meet specific operating standards (40 CFR 60.500 through 60.506).

Verify that each facility has a vapor collection system designed to collect the total organic compound vapors displaced from tank trucks during product loading and to prevent the total organic compounds collected at on-loading rack from passing to another loading rack. (1)(6)(30)

Verify that emissions from the vapor collection system do not exceed 35 mg of total organic compound per liter of gasoline loaded except that facilities with existing vapor processing systems that were constructed or refurbished before December 17, 1980 may emit 80 mg of total organic compounds per liter of gasoline loaded. (1)(6)(30)

Determine if the following loading procedures are followed: (1)(6)(30)

- vapor tightness documentation is available for each gasoline tank truck
- the tank identification number is recorded as each gasoline tank truck is loaded
- each tank identification number is cross-checked with the file of tank vapor tightness documentation within 2 weeks after the tank is loaded
- steps are taken to ensure that only vapor-tight tanks are loaded and vapor collection systems are operational.

Verify that the vapor collection and liquid loading equipment is designed and operated to prevent gauge pressure in the delivery tank from exceeding 4,500 pascals (450 mm of water) during product loading. (1)(6)(30)

Verify that pressure vacuum vents in the vapor collection system do not open at a system pressure of less than 4,500 pascals (450 mm of water). (1)(6)(30)

Verify that a monthly inspection of the vapor collection system, the vapor processing system, and each loading rack handling gasoline is done during loading and inspection records are kept on file for 2 years. (1)(6)(30)

Verify that leaks are repaired within 15 calendar days after detection. (1)(6)(30)

Verify that records of all replacements or additions of components performed on existing vapor processing systems are kept for at least 3 years. (1)(6)(30)

REQUIREMENTS:**

1-30. The emission of volatile hazardous air pollutants, which includes vinyl chlorides and benzene, from pumps, compressors, pressure relief devices, sampling connection systems, flanges and other connectors, and product accumulator vessels operating in VHAP service, including emissions of vinyl chlorides and benzene, are required to be managed according to specific requirements (40 CFR 61.110 through 112, 61.240 through 242-1, 61.242-10, 61.246, and 61.247).

...

REVIEWER CHECKS:

Determine where the installation operates sources in volatile hazardous air pollutant (VHAP) service.

Verify that when a leak is detected: (1)(2)

- a weatherproof and readily visible identification marked with the equipment identification number is attached to the leaking equipment
- the identification is removed only after no leak has been detected for 2 months or the leak is repaired
- leaks detected for pumps, compressors, pressure-relief devices in liquid service, and flanges are recorded in a log and maintained for 2 years at a readily accessible location.

Verify that the following records are maintained: (1)(2)

- a list of identification numbers of all equipment to which a standard applies
- a list of equipment designated for no detectable emissions
- dates of compliance tests
- a list of identification numbers for equipment in vacuum service
- information and data used to demonstrate that a piece of equipment is not in VHAP service.

Verify that a semiannual report listing the number of leaks identified, items which were not repaired, explanation of repair delays or infeasibility of a shutdown, dates of shutdowns, and revisions to previous reports is submitted to the USEPA Administrator. (1)(2)

...

*Does not include electric utility steam generating unit that started construction or modification after September 18, 1978.

Appendix 1-2

Formulas for Calculating Emissions Limitations

Steam generating units that started construction, modification, or reconstruction after June 19, 1984 with a heat input capacity of greater than 100 MBtu/hr.

SULFUR DIOXIDE from facilities combusting coal or oil:

$$E = \frac{(K_a H_a + K_b H_b)}{(H_a + H_b)}$$

where:

- E - the sulfur dioxide emission limit
- K_a - 1.2 lb/MBtu
- K_b - .80 lb/MBtu heat input
- H_a - the heat input from the combustion of coal
- H_b - the heat input from the combustion of oil

SULFUR DIOXIDE from facilities combusting coal or oil alone or with other fuel while using emerging technology:

$$E_s = \frac{(K_c H_c + K_d H_d)}{(H_c + H_d)}$$

where:

- E_s - the sulfur dioxide emission limit (expressed in NO_2), ng / J (lb /MBtu) heat input
- K_c - 260 ng / J (0.60 lb/MBtu)
- K_d - 170 ng / J (0.40 lb/MBtu)
- H_c - the heat input from the combustion of coal, J (MBtu)
- H_d - the heat input from the combustion of oil, J (MBtu)

Appendix 1 - 2 (Continued)

NITROGEN OXIDE EMISSIONS from facilities simultaneously combusting coal, oil, or natural gas with by-products/waste:

$$E_n = \frac{[(EL_{go} H_{go}) + (EL_{ro} H_{ro}) + (EL_c H_c)]}{(H_{go} + H_{ro} + H_c)}$$

where:

- E_n - the nitrogen oxides emission limit (expressed as NO_x), ng / J (lb /MBtu)
- EL_{go} - the appropriate emission limit from paragraph (a)(1) for combustion of natural gas or distillate oil, ng / J (lb /MBtu)
- H_{go} - the heat input from combustion of natural gas or distillate oil and gaseous by-product /waste, ng / J (lb /MBtu)
- EL_{ro} - the appropriate emission limit from paragraph (a)(2) for combustion of residual oil, ng / J (lb /MBtu)
- H_{ro} - the heat input from combustion of residual oil and/or liquid by-product/waste
- EL_c - the appropriate emission limit from paragraph (a)(3) for combustion of coal
- H_c - the heat input from combustion of coal.

NITROGEN OXIDE EMISSIONS from facilities simultaneously combusting mixtures of coal, oil, or natural gas:

$$E_n = \frac{[(EL_{go} H_{go}) + (EL_{ro} H_{ro}) + (EL_c H_c)]}{(H_{go} + H_{ro} + H_c)}$$

where:

- E_n - the nitrogen oxides emission limit (expressed as NO_x), ng / J (lb /MBtu)
- EL_{go} - the appropriate emission limit from paragraph (a)(1) for combustion of natural gas or distillate oil, ng / J (lb /MBtu)
- H_{go} - the heat input from combustion of natural gas or distillate oil
- EL_{ro} - the appropriate emission limit from paragraph (a)(2) for combustion of residual oil
- H_{ro} - the heat input from combustion of residual oil
- EL_c - the appropriate emission limit from paragraph (a)(3) for combustion of coal
- H_c - the heat input from combustion of coal.

Appendix 1-3

Particulate Emission Standards

Steam generating units with a heat input capacity of greater than 100 MBtu/hour that started construction, modification, or reconstruction after June 19, 1984.

FACILITY TYPE

PARTICULATE EMISSIONS

Combusts only coal or coal and other fuels with an annual capacity factor for the other fuels of 10 percent or less.

0.05 lb/MBtu heat input

Combusts coal and other fuels and has an annual capacity factor greater than 10 percent and is subject to federally enforceable requirements limiting operations to an annual capacity factor greater than 10 percent for fuels other than coal.

0.10 lb/MBtu heat input

Combusts coal or coal and other fuels, was constructed after June 19, 1984 but before November 25, 1986 and has:

0.20 lb/MBtu heat input

- a) an annual capacity factor for coal and coal and other fuels of 30 percent or less
- b) has a maximum heat input capacity of 250 MBtu
- c) has a federally enforceable requirements limiting operation of affected facility to an annual capacity factor of 30 percent or less for coal or coal and other solid fuels.

Combusts oil or mixture of oil and uses a conventional or emerging technology to reduce sulfur dioxide emissions.

0.10 lb/MBtu heat input

Combusts wood or wood with other fuels except coal and has an annual capacity factor greater than 30 percent for wood.

0.10 lb/MBtu heat input

Combusts wood or wood with other fuels, except coal, with a maximum heat input capacity of 250 MBtu/hour and has an annual capacity factor of 30 percent or less for wood and is subject to a federally enforceable requirement limiting operation to an annual capacity factor of 30 percent or less.

0.20 lb/MBtu heat input

**Appendix 1-3
(continued)**

| FACILITY TYPE | PARTICULATE EMISSIONS |
|--|------------------------------|
| Combusts municipal-type solid waste or mixtures of municipal-type solid waste with other fuels with an annual capacity factor of 10 percent or less for other fuels. | 0.10 lb/MBtu heat input |
| Combusts municipal-type solid waste or mixtures of municipal-type solid waste with other fuels with an annual capacity factor of 30 percent or less for other fuels and has a maximum heat input capacity of 250 MBtu/hour or less that was constructed between June 19, 1984 and November 25, 1986 with a federally enforceable requirements limiting operating to an annual capacity factor of 30 percent. | 0.20 lb/MBtu heat input |

Appendix 1-4

Emissions Standards For Nitrogen Oxides

Fuel burning sources greater than 100 MBtu/hr heat input that started construction, modification, or reconstruction after June 19, 1984.

| FUEL/STEAM GENERATING UNIT TYPE | NITROGEN OXIDE EMISSION LIMIT LBS/MILLION Btu (EXPRESSED AS NO ₂) HEAT INPUT |
|--|--|

| | opacity | 20 %; 27% for 6 min. | Continuous |
| | sulfur dioxide ¹ | 1.2 lb/MBtu heat input and 10% of the potential combustion concentration (90% reduction) | Continuous |
| | | 30% of the potential combustion concentration if emissions are <0.60 lb/MBtu (70% reduction) | |
| | sulfur dioxide ¹ | 1.20 lb/MBtu and 15% of the potential combustion concentration | |

¹Emission reduction requirements do not apply to facilities operating under a sulfur dioxide commercial demonstration permit. When different fuels are combusted simultaneously, the applicable standard is determined by proration.

**Appendix 1-5
(continued)**

| FUEL TYPE | POLLUTANT | EMISSION LEVEL | MONITORING |
|--|------------------------------|---|-------------------|
| Liquid Fuels --coal-derived fuels --shale oil --all other fuels | nitrogen oxides ¹ | 30% reduction 0.50 lb/MBtu heat input 0.50 lb/MBtu heat input 0.30 lb/MBtu heat input | Continuous |
| | particulate | 0.03 lb/MBtu heat input and 30% of the potential combustion concentration | |
| | opacity | 20%; 27% for 6 min. | Continuous |
| | sulfur dioxide | 0.80 lb/MBtu heat input and 10% of the potential combustion concentration (90% reduction) 100% of the potential combustion concentration when emissions are <0.20 lb/MBtu. | Continuous |
| Gaseous fuels --coal-derived fuels --all other fuels | nitrogen oxides ¹ | 25% reduction 0.50 lb/MBtu heat input 0.20 | Continuous |
| | particulate | 0.03 lb/MBtu heat input | |
| | opacity | 20%; 27% for 6 min. | |
| | sulfur dioxide | 0.80 lb/MBtu heat input and 10% of the potential combustion concentration 100% of the potential combustion concentration when emissions are <0.20 lb/MBtu. | |

¹Emission reduction requirements do not apply to facilities operating under a sulfur dioxide commercial demonstration permit. When different fuels are combusted simultaneously, the applicable standard is determined by proration.

Appendix 1-6

Municipal Waste Combustor Operating Standards for Carbon Monoxide

| Municipal Waste Combustor Technology | emission limit (ppm by volume) |
|---|---|
| Mass burn waterwall | 100 |
| Mass burn refractory | 100 |
| Mass burn rotary waterwall | 100 |
| Modular starved air | 50 |
| Modular excess air | 50 |
| RDF stoker | 150 |
| Bubbling fluidized bed combustor | 100 |
| Circulating fluidized bed combustor | 100 |
| Coal/RDF mixed fuel fired combustor | 150 |

Appendix 1-7

Nitrogen Oxide Emissions From Stationary Gas Turbines

Formula A:

$$STD = 0.0075 \frac{(14.4)}{Y} + F$$

Formula B:

$$STD = 0.0150 \frac{(14.4)}{Y} + F$$

STD = allowable NO_x emissions (percent by volume at 15 percent oxygen and on a dry basis).

Y = manufacturer's rated heat rate at manufacturer's rated load or, actual measured heat rate based on lower heating value of fuel as measured at actual peak load for the facility. The value of Y shall not exceed 14.4 kilojoules per watt hour.

F = NO_x emission allowance for fuel-bound nitrogen, defined as follows:

| Fuel-Bound Nitrogen (% by weight) | F |
|-----------------------------------|-------------------------|
| N < 0.015 | 0 |
| 0.015 < N < 0.1 | 0.04(N) |
| 0.1 < N < 0.25 | 0.004 + 0.0067(N - 0.1) |
| N > 0.25 | 0.0025 |

N is the nitrogen content of the fuel (percent by weight)

Section 2

CLEAN WATER ACT (CWA)

SECTION 2

CLEAN WATER ACT (CWA)

A. Applicability of this Protocol

This protocol includes regulations, responsibilities and compliance requirements associated with wastewater discharge at Army installations.

- Wastewater discharge can include any of the following:
 - Sanitary or industrial wastewater discharge directly to a receiving stream, or through an on-site treatment facility
 - Sanitary or industrial wastewater discharge to an off-site Public Owned Treatment Plant or to a treatment plant of another DoD or Federal activity
 - Storm water discharge associated with industrial activity on the installation going to a receiving stream or water body.

Most Army installations have wastewater discharge of one type or another, and therefore this protocol will be applicable to most installations.

Wastewater discharge is primarily regulated on the Federal level United States Environmental Protection Agency (USEPA) and/or by state regulatory agencies. This protocol integrates all wastewater related compliance requirements from Federal, state, DoD, and Army regulations. However, because the focus of wastewater discharge compliance is an installation's specific permits, many of the review items in this protocol are presented in a generic manner.

It also contains information on POL regulations and requirements. This protocol applies to Army installations which store, transport, dispose, or utilize petroleum-based fuels or lubricants (POL). The protocol presents review action items which respond to regulations, procedures, and organizational mechanisms designed to prevent or limit the accidental release of POL materials to surface water, ground water, or soils.

This protocol covers management of above and below ground POL bulk storage tanks, organizational tanks, pipeline delivery systems, truck fill stands, immediate operating storage areas, and fueling/ defueling flight line operations. POL materials addressed include jet fuel (JP-4), AVGAS, MOGAS, diesel fuel and lubricating oils. Waste petroleum based solvents (including PD-680) are addressed in Section 3, Hazardous Waste Management. The portion of this

protocol dealing with underground storage tanks also applies to hazardous materials storage.

POL Management is regulated by Federal (EPA) and state regulatory agencies. The implementation of the required regulatory responses at the installation level are based on DoD and U.S. Army regulations and technical orders. The primary focus of the review protocol worksheets is the organizational mechanisms which control or prevent environmental releases at the source.

B. Federal Legislation

- Congress enacted the Federal Water Pollution Control Act in 1948. Since then, the Act has been largely amended by the enactment of the Clean Water Act (CWA) of 1977 [Public Law 95-217], and is principally codified at 33 USC 1251, et. seq. CWA's intent was to restore and protect the integrity of the Nation's waters by controlling the discharge of pollutants into those waters.
- The Water Quality Improvement Act of 1974 is the primary Federal law governing the discharge of oil into navigable waters. This regulation prohibited the discharge of "harmful" quantities of oil into navigable waters. 40 CFR 110, *Protection of Environment - Discharge of Oil*, defines "harmful" quantities as those discharges which will cause a sheen or discoloration of the surface of the water or a sludge or emulsion to be deposited beneath the surface of the water.
- 40 CFR 112, *Oil Pollution Prevention - Non-Transportation Related Onshore and Offshore Facilities*, was pursuant to Section 311 (j)(1)(c) of the Federal Water Pollution Control Act Amendments of 1972. This regulation requires that operators of facilities which have discharged, or due to their location, could reasonably be expected to discharge oil into or onto the navigable waters of the United States, prepare a Spill Prevention Control and Countermeasure (SPCC) Plan. This SPCC Plan must address the use of pollution prevention equipment, spill response training of operating personnel, the use of secondary containment, and an oil spill contingency plan. "Oil" is defined in 40 CFR 122.2 as oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse and oil mixed with wastes other than dredged spoil.
- CWA regulates wastewater discharge directly into navigable or surface waters and those indirect discharge into Publicly Owned Treatment Works (POTWs) (40 CFR 403). CWA also established the National Pollutant Discharge Elimination System (NPDES), which prohibits the direct discharge of any pollutants from a point source into U.S. waters except by special permits (40 CFR 122).

40 CFR Parts 405 through 471 contain categorical effluent limitations. Army installations may be affected with the implementations of: electroplating (40

CFR 413); steam electric power generating (40 CFR 423); metal finishing (40 CFR 433); photography (40 CFR 459); and hospital (40 CFR 460). The effluent guidelines for photographic sources and hospitals only deal with limitations on direct discharges. Effluent limitations for installations with these activities will be stipulated in the installations' specific NPDES permit.

Section 313(a) of the CWA (codified at 33 USC 1323) subjects Federal agencies to Federal, state, and local water pollution controls both substantively and procedurally. Section 313(a) limits Federal facility liability to "civil penalties arising under Federal law or imposed by a state or local court to enforce an order or the process of such court." Like the Clean Air Act, the CWA also provides for Presidential exemptions for executive branch agencies.

The CWA also provides for citizen suits against Federal facilities for failing to obtain the necessary permits, violations of the terms of a permit, or violation of effluent standards or limitations [Section 505 a (l) and (f), 33 USC 1365].

The CWA makes it illegal for any person (including Federal facilities) to discharge pollutants from a point source into waters of the United States without a permit [Section 301, 33 USC 1311]. Section 402 (33 USC 1342(a)) provides for the issuance of such permits [which may be issued by the states -- see Section 402 (a)(5), 33 USC 1342(b)] under the NPDES, and Section 404 (33 USC 1344) provides for the issuance of permits for discharges of dredged or fill material. (Note: Certain Federal projects specifically authorized by Congress do not require Section 404 permits.)

C. State/Local Requirements

- States normally have wastewater discharge legislation and regulations that require permitting similar to the NPDES program. The state is often delegated authority to administer the NPDES permits for discharges in their state. These permits are often joint permits issued pursuant to both Federal CWA and state legislation. In some cases, the state will not administer the NPDES program and will issue a state permit (SPDES) even though a NPDES permit has been issued by the USEPA. This dual permitting is common. The states and the USEPA normally cooperate in the permit issuance process to ensure that the two permits are consistent, but there may be differences in monitoring requirements and the number of pollutants limited. These requirements normally do not conflict, but may require additional sampling and dual reporting.

States also have more stringent requirements for wastewater treatment plant operations. Many states have sanitary treatment plant (STP) operator licensing and certification programs that require operators to pass an exam and have a required level of experience.

Local entities (counties, cities) also may have enforceable wastewater discharge limitations that regulate discharges to an off-site POTW. Local limitations often include pH, temperature, and concentrations of various organic and inorganic compounds. Major industrial operations may require a POTW permit and a monitoring program. In some cases, another DoD activity may stipulate effluent discharge limitations for discharges to their treatment plant if the Army installation discharges to the DoD facility.

Many states and some major metropolitan and regional planning agencies have developed legislation and implemented regulations which closely parallel the Federal statutes. Some, however, may differ in important ways, and the evaluator should obtain copies of the state or local requirements for OHSPC and SPCC plans, where appropriate, and review them for those differences before conducting the evaluations. In particular, the evaluator should check for differences in the definitions of reportable quantities and the specific procedures for reporting spills that may exist in state/local regulations. In all cases the most stringent regulations should be followed.

D. DoD Regulations

- DoD Instruction 4120.14, *Policies for Improvements Needed to Abate Water Pollution Emanating from DoD Facilities*, (NOTAL) implements within DoD policies provided by EO 12088, *Federal Compliance with Pollution Standards*, and OMB Circular A-106 and establishes policies for developing and submitting plans for installing improvements needed to abate water pollution emanating from DoD facilities.
- DoD Directive 4140.25M, *Procedures for the Management of Petroleum Products*, describes procedures for the management of petroleum products on military installations.
- DoD Directive 5030.41, *Oil and Hazardous Substances Pollution Prevention and Contingency Program*, addresses requirements for compliance with the National Oil and Hazardous Substances Pollution Contingency Plan.
- Defense Environmental Quality Program Policy Memorandum (DEQPPM) 79-3, *Management of Recoverable and Waste Liquid Petroleum Products*, addresses the management of recoverable and waste liquid petroleum products.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, directs all Army facilities to comply with the provisions of the Clean Water

Act. Chapter 3 outlines the Water Resources Management Program, which includes regulation and guidance beyond the limits of the Clean Water Act and the Safe Drinking Water Act (discussed in Section 3 of this manual). The Water Resources Management Program requires the Army to conserve all water resources, control or eliminate all sources of pollutants, cooperate with Federal, state, regional, and local authorities in forming and carrying out water pollution control plans, control runoff and erosion, and consider nonpoint source abatement in all construction, operation, and land management activities.

The paragraph on the Clean Water Act (para. 3-3) provides specific instructions for meeting compliance requirements. It covers discharge permits under NPDES, site inspections, connection to municipal/regional wastewater systems, pretreatment standards, investigation of complaints, and notification procedures.

Chapter 8 of AR 200-1 addresses Oil and Hazardous Substances Spill Contingency Planning, Control, and Emergency Response. It prescribes the policy and procedure for prevention and control of spills of oil and hazardous substances, and sets out guidance in accordance with regulations implemented by the Clean Water Act.

F. Key Compliance Requirements

- Discharge Permits - NPDES permits are required for all point source discharges to "navigable waters." Discharges shall comply with all terms and conditions of an USEPA or state issued permit under the State Pollutant Discharge Elimination System (SPDES).
- Monitoring, Recordkeeping, and Reporting - Discharge permits usually require monitoring that includes the installation, use, and maintenance of equipment for influent and effluent and receiving water sampling. Recordkeeping and reporting, including scheduled discharge monitoring reports (DMR), are also required.
- Discharges to Army POTWs or treatment plant of another DoD activity - Discharges to off-site treatment facilities shall meet all applicable general and categorical pretreatment standards in 40 CFR 401-471. Army installations that discharge to off-site treatment facilities must adhere to the discharge limitations that are stipulated in local ordinances. However, many local POTW authorities have not yet developed pretreatment programs.
- Industrial Pretreatment - The USEPA has set effluent standards for many industries that discharge to POTWs. These categorical standards are contained in 40 CFR 404 to 471, and are implemented through local pretreatment programs established by POTWs. In some instances, a state may assume this local responsibility. Industrial discharge limitations are stipulated in local ordinances. Installations can control discharges and impose their own pretreatment

requirements on discharges to their collection system through the installation wastewater regulation.

Industrial activities on Army installations which may be subject to categorical discharge limitations are:

- electroplating (40 CFR 413)
- steam electric power generating (40 CFR 423)
- metal finishing (40 CFR 433).

Effluent limitations for photographic sources (40 CFR 459) and hospitals (40 CFR 460) govern only direct discharges, and will therefore be contained in a installation's NPDES permit.

- **Operator Certification/Training** - state regulatory agencies require all superintendents and operators of waste treatment facilities to be certified by the state. Periodic refresher training is also required of treatment plant personnel to maintain their certification.
- **Sludge Disposal** - Sludge from wastewater treatment plants must be disposed of in accordance with state regulations. Normally, testing of sludge is required to ensure that it does not have heavy metal concentrations that would render it a hazardous waste. Permits are normally required to dispose of sludge by land application.
- **Spill Prevention Control and Countermeasure Plan** - Army installations that operate POL facilities are required to prepare a SPCC Plan (40 CFR 112). This plan must be prepared in accordance with the guidelines set forth in 40 CFR 112.7, and the plan must be reviewed every three years and modified within six months of significant changes in POL facilities, or if new, field proven technology has been developed which will significantly reduce the likelihood of a spill (40 CFR 112.5).
- **Spill Response Training** - All Army personnel involved with the management and handling of oil and hazardous substances must take part in periodic spill prevention and response training programs (40 CFR, Parts 112.7, 264.16 and 265.16).
- **Facility Design and Inspection Procedures** - 40 CFR 112.7 sets forth minimum design criteria and inspection procedures for POL facilities and operations which must be addressed in the SPCC Plan, and Army Regulations or Technical Orders.

G. Responsibility for Compliance

- The Directorate of Engineering and Housing (DEH) is responsible for monitoring wastewater discharge and stream water quality at selected locations around the installation.
- The Preventive Medicine Officer is responsible for proper sample collection from drinking water systems at Army installations and determining compliance with standards. Interpretation of results of water analyses, and notification to state regulatory authorities when maximum contaminant levels are exceeded are also the responsibility of the Preventive Medicine Officer.
- Spill Response Team (SRT) is tasked to respond to spills when requested by an On-Scene Commander (OSC) and to perform spill containment, recovery, clean-up, disposal and restoration activities as directed by the OCS. The SRT is a multidisciplinary team often including the following persons: Facilities Engineer, Environmental Coordinator, Director of Safety and Health, Fire Chief, Military Police, Public Affairs Officer, Safety Officer, and Staff Judge Advocate.
- Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department will be responsible to make periodic fire safety inspections of flammable/combustible storage and handling areas, hazardous waste storage areas, and accumulation points on the installation.
- Safety Officer is responsible for conducting work place safety evaluations and inspections of the handling and storage of hazardous materials and waste. The Safety Officer will provide the appropriate manager with a report of their findings and recommended corrective actions. The Safety Officer is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.
- Fuels Management Officer of DEH is responsible for the safe and efficient receipt, storage, handling, issuing, and accounting of all petroleum products to include all general operations and inspections.
- Directorate of Engineering and Housing (DEH) is responsible for the maintenance of all installed petroleum storage and dispensing systems. This responsibility often is discharged by the Liquid Fuels Maintenance (LFM) shop. The DEH also is responsible for the calibration of permanently installed meters.

H. Key Compliance Definitions

These definitions were obtained from the Federal, DoD, and U.S. Army Regulations cited previously, and from 40 CFR 122 and Section 402 of the Clean Water Act.

- ***Approved Municipal Facility*** - a water treatment facility that has been inspected and approved by a state, local, or other regulatory agency that has jurisdiction.
- ***Best Available Technology (BAT)*** - the best technology treatment techniques, or other means which the administrator finds, examined for efficacy under field conditions and not solely under lab conditions that are available (taking cost into consideration). For the purposes of setting Maximum Contaminant Levels (MCLs) for synthetic organic chemicals, any BAT must be at least as effective as granular activated carbon, or air stripping.
- ***Good Management Practice (GMP)*** - schedules of activities, prohibitions of practices, maintenance procedures, and other management procedures, to prevent or reduce the pollution of "water of the United States." GMPs also include the treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.
- ***Certificate*** - proof of certification as an operator or superintendent, it is issued by a state regulatory agency.
- ***Community Water System*** - a public water system that serves at least 15 service connections used by year-round residents or that regularly serves at least 25 of the same persons over 6 months per year.
- ***Composite Sample*** - a combination of individual samples obtained at regular intervals over a time period. Either the volume of each individual sample is proportional to discharge flow rates or the sampling interval (for constant volume samples) is proportional to the flow rates over the time period used to produce the composite. The maximum time period between individual samples shall be 2 hours.
- ***Contaminated Water*** - water that has been intruded by micro-organisms, chemicals, wastes, or wastewater in a concentration that makes the water unfit for its intended use.
- ***Daily Average Concentration*** - the arithmetic average of all the daily determinations of concentration made during a calendar month. Daily determinations of concentrations made using a composite sample shall be the concentration of the composite sample. When grab samples are used, the daily determination of

concentration shall be the arithmetic average of all the samples collected during that calendar day.

- *Daily Average Discharge* - the total discharge by weight during a calendar month divided by the number of days in the month that the production or commercial facility was operating. Where less-than-daily sampling is required by this permit, the daily average discharge shall be determined by the summation of all the measured daily discharges by weight divided by the number of days during the calendar month when the measurements were made.
- *Daily Average Temperature* - the arithmetic mean of temperature measurements made hourly basis, or the mean value plot of the record of a continuous automated temperature recording instrument, either during a calendar month, or during the operating month if flows are of shorter duration.
- *Daily Maximum Concentration* - the daily determination of concentration for any calendar day.
- *Daily Maximum Discharge* - the total discharge by weight during any calendar day.
- *Daily Maximum Temperature* - the highest arithmetic mean of the temperatures observed for any 2 consecutive hours during a 24-hour day, or during the operating day if flows are of shorter duration.
- *Direct Discharger* - any point source discharger who discharges directly into any stream, river, bay, ocean, or any other watercourse.
- *Erosion* - the wearing away of a land surface by wind or water.
- *Grab Sample* - an individual sample collected in less than 15 minutes.
- *Gross Alpha Particle Activity* - the total radioactivity due to alpha particle emissions as inferred from measurements on a dry sample.
- *i-s = Immersion Stabilization* - a calibrated device immersed in the effluent stream until the reading is stabilized.
- *Indirect Discharger* - a point-source discharger whose discharge is conveyed directly to a publicly or privately owned waste treatment facility and not directly to a watercourse. An indirect discharger may not require an NPDES permit.
- *Industrial Activity* - this terms includes, but is not limited to, material handling sites; refuse sites; sites used for the application or disposal of process

wastewaters; sites used for the storage and maintenance of material handling equipment; shipping and receiving areas; storage areas (including tank farms) for raw materials; and areas where industrial activity has taken place in the past and significant materials remain and exposed in storm water. This also includes construction activities that result in the disturbance of more than five acres, recycling centers, and steam electric power generating facilities.

- **Installation Spill Contingency Plan (ISCP)** - a plan maintained to identify resources for spill cleanup at the installation level and to provide assistance to outside agencies. An ISCP must contain:

- responsibilities, duties, procedures, and resources to be used to cleanup spills
- description of immediate response actions to be taken when a spill occurs.

- **Interference** - a discharge which, alone or in conjunction with one or more discharges from other sources inhibits or disrupts the POTW and causes a violation of any requirement of the POTW's NPDES permit.
- **Maximum Contaminant Level (MCL)** - the maximum permissible level of a contaminant in water that is delivered to the free flowing outlet of the ultimate user, except in the cases where the maximum permissible level is measured at the point of entry to the distribution system.
- **Navigable Waters** - Includes all navigable "waters of the United States including the territorial seas," and includes, but is not limited to:
 - (1) all waters which are presently used, or were used in the past, or may be susceptible to use as a means to transport interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide, and including adjacent wetlands; the term "wetlands" as used in this regulation shall include those areas that are inundated or insaturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas; the term "adjacent" means bordering, contiguous or neighboring;
 - (2) tributaries of navigable waters of the United States, including adjacent wetlands;
 - (3) interstate waters, including wetlands; and

- (4) all other waters of the United States such as interstate lakes, rivers, streams, mudflats, sandflats, and wetlands, the use, degradation or destruction of which affect interstate commerce including, but not limited to:
- (i) interstate lakes, rivers, streams, and wetlands which are utilized by interstate travelers for recreational or other purposes; and
 - (ii) interstate lakes, rivers, streams, and wetlands from which fish or shellfish are or could be taken and sold in interstate commerce; and
 - (iii) interstate lakes, rivers, streams, and wetlands which are utilized for industrial purposes by industries in interstate commerce.
- ***Nontransient Noncommunity Water System (NTNCWS)*** - a public water system that is not a community water system and that regularly serves at least 25 of the same persons over 6 months per year.
 - ***NPDES Permit*** - a permit granted by USEPA to a direct discharger which permits wastewater discharge to a watercourse in accordance with the conditions of the permit. NPDES means National Pollutant Discharge Elimination System.
 - ***Noncontact Cooling Water*** - the water that is contained in a leakfree system, i.e., no contact with any gas, liquid, or solid other than the container for transport; the water shall have no net poundage addition of any pollutant over intake water levels.
 - ***Nonpoint Source*** - a diffuse source of water pollution that does not discharge through a pipe, such as runoff from construction activities and agricultural, silvicultural, and urban areas.
 - ***Oil*** - is defined in 40 CFR 122.2 as oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse.
 - ***Palatable Water*** - water that is pleasing to the taste and free of objectionable color, turbidity, taste, or odor. Palatability does not imply potability.
 - ***Pass Through*** - a discharge which exits the POTW into waters in quantities or concentrations which, alone or in conjunction with one or more discharges from other sources, is a cause of a violation of any requirement of the POTW's NPDES permit.
 - ***PicoCurie (pCi)*** - quantity of radioactive material producing 2.22 nuclear transformations/ minute.

- *Point of Entry Treatment Device* - a treatment device applied to the drinking water entering a house or building for the purpose of reducing contaminants in the drinking water distributed throughout the house or building.
- *Point-of-use Treatment Device* - a treatment device applied to a single tap used for the purpose of reducing contaminants in drinking water at that one tap.
- *Point Source* - any discernible confined and discrete conveyance including but not limited to a pipe, ditch, channel, or conduit from which pollutants are or may be discharged.
- *Population Served* - the number of installation residents served plus one-third of the nonresidents usually served by the system (Revised rules are under consideration).
- *Potable Water* - water that has been examined and treated to meet the proper standards and declared by responsible authorities to be fit for drinking.
- *Primacy (Primary Enforcement Responsibility)* - the primary responsibility for administration and enforcement of primary drinking water regulations and related requirements applicable to public water systems within a state.
- *Public Water System* - a system for providing to the public piped water for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
- *Raw Water* - 1) untreated water that enters the first unit of a water treatment plant; 2) water used as a source of water supply taken from a natural or impounded body of water, such as a stream, lake, pond, or underground aquifer.
- *Red Water* - highly contaminated industrial waste.
- *Runoff* - water from rain, snow melt, or irrigation that flows over the ground surface to streams. It can collect pollutants from land and air and carry them to receiving waters.
- *Sediment* - solid material, such as silt, sand, and organic matter, that moves from its site of origin and settles to the bottom of a watercourse or water body. Excessive amounts of sediment can clog a watercourse and interfere with navigation, fish migration, spawning, etc. If disturbed, sediment can be resuspended in the water column, where it contributes to turbidity.

- ***Silviculture*** - management of forest land for timber. Some silvicultural practices, such as clear-cutting, may contribute to water pollution by increasing the erodibility of the land.
- ***Soil Stabilization*** - a nonstructural GMP that involves the use of mulches and ground covers, reduces precipitation velocity, and effectively decreases the amount of sediment in runoff, thus reducing the volume of runoff.
- ***Spill Prevention, Control, and Countermeasure Plan*** - The SPCC plan shall be a carefully thought-out plan prepared in accordance with good engineering practices, and which has the full approval of management at a level with authority to commit the necessary resources.
- ***State*** - any of the 50 states, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.
- ***Structural GMPs*** - devices constructed for pollution control purposes, such as detention/retention basins, diversion structures, and filter structures.
- ***Superintendent*** - an individual who is designated by any employing or appointing person, county, municipality, sanitary district, or state as the individual in responsible charge of a water works, wastewater works, or industrial wastewater works.
- ***Watershed*** - the area of land that drains into a particular watercourse or water body.

CLEAN WATER ACT (CWA)

GUIDANCE FOR WORKSHEET USERS

| | REFER TO WORKSHEET ITEMS: | CONTACT THESE PERSONS OR GROUPS:(a) |
|--|------------------------------|--|
| All installations | 2-1 through 2-4 | (1)(2)(3)(9)(12)(15)(21)(22) |
| If the installation has any permitted discharges of sanitary or industrial wastewater or storm water | 2-5 through 2-16 | (1)(2)(9)(14) |
| If the installation stores, transports, or disposes petroleum products | 2-17 through 2-27 | (1)(2)(6) |
| If the installation has diked areas, or discharges wastewater | 2-28 through 2-33 | (2)(9)(14) |
| If the installation has aboveground or belowground tanks, or piping | 2-34 through 2-40 | (2)(9) |

(a) CONTACT/LOCATION CODE:

- (1) Directorate of Engineering and Housing (DEH)
- (2) Environmental Coordinator (EC)
- (3) Preventive Medicine Officer
- (6) Director of Logistics (DOL)
- (9) Chief of Operations and Maintenance (O&M)
- (12) Director of Plans, Training, Mobilization, and Security (DPTMSBC)
- (14) Wastewater Treatment Plant Supervisor (O&M)
- (15) Land Management Officer (DEH)
- (21) Public Affairs Office
- (22) Staff Judge Advocate

CLEAN WATER ACT (CWA)

Records to Review:

- NPDES/SPDES Permits
- NPDES/SPDES Permit renewal applications (if expire within 180 days)
- Discharge monitoring reports for the past two years
- Laboratory records and procedures and USEPA QA results
- Monthly operating reports for wastewater treatment facilities
- Flow monitoring calibration certification and supporting records
- Ash pond volume certification and supporting records
- Red water inspection records
- Special reports, certifications, etc., required by NPDES permit
- Spill Prevention Control and Countermeasure (SPCC) Plan
- All records required by SPCC Plan
- Oil transfer manual (33 CFR parts 154 and 156)
- All notices of noncompliance
- All notices of violations
- NPDES state or Federal inspection reports and citations/violations
- Sewage treatment plant operator certification
- Water treatment plant operator certification
- Administrative Orders
- Sewer and storm drain layout
- Local sewer ordinance
- Local service use permit
- Notification to local POTW
- Old Spill Reports
- Repair/Maintenance records for the wastewater treatment system
- Design plans for wastewater treatment plans
- Names and phone numbers of operator of sewage treatment plant
- Lab operators (wastewater analysis)

Physical Features to Inspect:

- Discharge to POTW
- Discharge outfall pipes
- Wastewater treatment facilities
- Industrial treatment facilities
- Streams, rivers, open waterways
- Floor & sink drains (especially in industrial areas)
- Storm water collection points (especially in industrial areas)
- Oil storage tanks
- Oil/water separators
- Fire Training Pit
- Nonpoint source discharge areas

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Director of Logistics (DOL)
- Chief of Operations and Maintenance (O&M)
- Director of Plans, Training, Mobilization, and Security (DPTMSEC)
- Wastewater Treatment Plant Supervisor (O&M)
- Land Management Officer (DEH)
- Public Affairs Officer
- Staff Judge Advocate

Section 3

SAFE DRINKING WATER ACT (SDWA)

SECTION 3

SAFE DRINKING WATER ACT (SDWA)

A. Applicability of this Protocol

This protocol identifies rules, regulations, and requirements for any U.S. Army installation that has jurisdiction over any public water supply system. A public water system is defined as "any collection, treatment, storage, or distribution facility for the provision of piped water for human consumption, provided that the system for which it exists has at least 15 service connections or regularly serves at least 25 individuals daily for a total of at least 60 days per year."

- Army installations that meet all the criteria listed below are not required to comply with the requirements of the Safe Drinking Water Act since, by definition, they are not "public water systems." (40 CFR 141.3)
 - a) System consists only of distribution and storage facilities and does not have any collection and treatment facilities.
 - b) Installation gets all of its water from a public water system that is owned or operated by another party (non-Army).
 - c) Installation does not sell water to any party.

Even though the above criteria may apply to an Army installation, as a practical matter, Army regulations require compliance with drinking water standards and monitoring requirements. Therefore, this protocol should be used to determine compliance with drinking water requirements even though some items may be noted as not applicable (N/A) by the evaluator.

B. Federal Legislation

- The Safe Drinking Water Act (SDWA) [P.L. 93-523 and its amendments, specifically the Safe Drinking Water Amendments of 1977 (P.L. 95-190) and the Safe Drinking Water Amendments of 1986 (P.L. 99-339); generally codified at 42 USC 300f-300j and referred to as "SDWA"] specify a system for the protection of drinking water supplies through establishment of contaminant limitations and enforcement procedures. The U.S. Environmental Protection Agency (USEPA) has promulgated contaminant limitations in two phases: primary drinking water standards to protect public health; and, secondary drinking water standards affecting the aesthetic qualities of drinking water. In addition, the SDWA mandates the regulation of underground drinking wells to protect drinking water sources through the Underground Injection Control Program.

The 1986 amendments to the SDWA require states to develop programs to protect wellhead areas. Section 1428(h) of the amendments requires all Federal agencies having jurisdiction over any potential source of contaminants identified by a state wellhead protection program to be subject to and comply with all requirements of the state program "as any other person, including payment of reasonable charges and fees."

- *The National Primary Drinking Water Regulations*, 40 CFR 141, were promulgated pursuant to the SDWA and, among other things, specify Maximum Contaminant Levels (MCLs) for six categories of contaminants:

- Inorganic Chemicals
- Organic Chemicals
- Turbidity
- Microbiological Contaminants
- Natural radioactivity
- Man-made radionuclides.

Appendix 3-2 shows the National Primary Drinking Water Standards applicable to all Army installations.

- The National Secondary Drinking Water Regulations (40 CFR 143) establish secondary MCLs for 13 contaminants that affect the aesthetic qualities of drinking water. At much higher concentrations of these contaminants, health implications may exist in addition to aesthetic degradation. Compliance with the National Secondary Drinking Water Regulations is optional.
- The Underground Injection Control (UIC) Program (40 CFR 144) prohibits any underground injection of waste, except as authorized by permit or rule.
- The SDWA requires each Federal activity with jurisdiction over a public water system to comply with applicable Federal, state, or local requirements, whether substantive or administrative, "in the same manner, and to the same extent, as any nongovernmental entity." The SDWA also provides for citizen suits for noncompliance.

C. State/Local Requirements

- States have primary responsibility ("primacy") to enforce compliance with national primary drinking water standards and sampling, monitoring, and notice requirements in conformance with 40 CFR 141. USEPA executes the enforcement responsibilities until individual state programs are approved.

- States that have primacy may establish drinking water regulations, monitoring schedules, and reporting requirements more stringent than, or in addition to, those in the Federal regulations. It is very important to remember that Army public water systems in these states are required to comply with these additional requirements. The standards identified in the questions of this section are minimum, Federal requirements. Generally speaking, most states that have primacy adopt drinking water regulations that closely reflect the Federal requirements. Almost all states have achieved authorization from USEPA to administer drinking water compliance programs including UIC programs.

D. DoD Regulations

- DoD Directive 6230.1, *Safe Drinking Water*, of 24 April 1978, sets forth DoD policy for provisions of adequate safe drinking water and compliance with the Safe Drinking Water Act and the standards established by 40 CFR 141.

E. U.S. Army Regulations

- Army Regulation (AR) 40-5, *Preventive Medicine*, establishes practical measures for the preservation and promotion of health and the prevention of disease and injury. Among other things, it explains the Army Preventive Medicine Program, establishes military occupational and environmental health standards, and provides a basic guide for commanders, the installation medical authorities (IMAs), and other interested persons and agencies.
- AR 200-1, *Environmental Protection and Enhancement*, mandates Army compliance with SDWA.
- AR 420-46, *Water and Sewage*, establishes policies and procedures governing installations that supply water and dispose of sewage and industrial wastes. It applies to all DA installations. In general, it addresses the following facilities engineering activities: the furnishing of sewage services; operations of water and sewage pumping and treatment plants; the maintenance, repair, and alteration of facilities and appurtenances required for the production, pumping, treatment, and distribution of water; and the collection and disposal of sewage and industrial waste.
- AR 700-136, *Land Based Water Resources Management in Contingency Operations*, sets policy and procedures for water resources management in support of contingency operations. It defines the Army role in joint contingency operations and outlines responsibilities for water support. This regulation does not apply to fixed installation water support operations or civil works emergency water management.

F. Key Compliance Requirements

- **National Primary Drinking Water Standards** - Contaminant limitations, monitoring requirements, and enforcement procedures are contained in the National Drinking Water Standards, 40 CFR Part 141. Army activities with public water systems were required to comply with these requirements, or state requirements where the state has enforcement authority, no later than 24 July 1977.
- **Sampling and Analysis** - Sampling and analytical requirements for public water systems are also promulgated in 40 CFR Part 141 or in applicable state regulations. Initial sampling to characterize each specified contaminant (and any required subsequent sampling) shall be conducted within required time frames and at the frequencies specified. Sample analyses shall be performed in laboratories certified by USEPA or approved by the state.
- **Reporting and Recordkeeping** - Results of tests, analyses, and measurements required for compliance shall be forwarded within prescribed times to appropriate USEPA regional offices or approved state agencies, as applicable. Records of bacteriological analyses shall be retained for 5 years; chemical/ physical analyses, for 10 years.
- **Noncompliance Monitoring and Reporting** - Installations operating public water systems shall report to USEPA regional offices or the approved state any instances of noncompliance with primary drinking water standards, variances, or exemptions, including failure to comply with sampling/monitoring requirements. Noncompliance conditions shall also be reported to all persons served by the public water system. The timing and means for all notifications shall be as prescribed in 40 CFR 141 or applicable state/ local regulations.
- **Operating Out of Compliance** - Variances (and exemptions) may be granted by USEPA or approved by the states subject to public notice and hearing requirements to enable noncomplying public water systems to continue operating. Variances (and exemptions) must include schedules and methods for attaining compliance.
- **Water System Operator Certification** - Army water system operators shall meet operator certification requirements of the state in which the system is located. Job descriptions for new or vacant Army water system operator positions shall require a state certification or license as a condition of employment at all facilities where state certification requirements are applicable.

G. Responsibility for Compliance

- Preventive Medicine Office is responsible for proper sample collection from drinking water systems at Army installations and determining compliance with drinking water standards. Coordination with the Occupational and Environmental Health Laboratory (OEHL), interpretation of results of water analyses, and notifications to state regulatory authorities when maximum contaminant levels are exceeded are also the responsibilities of the Preventive Medicine Office.
- The Directorate of Engineering and Housing (DEH) designs, constructs, and operates the water distribution system to provide sufficient drinking water to installation personnel. The DEH is responsible for providing adequate water treatment to assure drinking water does not exceed the maximum contaminant levels established for human consumption. Training of operating personnel to meet proficiency levels consistent with the operator certification requirements that apply to their location is also the responsibility of the DEH. It also maintains an up-to-date map of the complete potable water system, makes repairs, and maintains the system. The DEH is also responsible for negotiating and maintaining the installation's water supply contract.

H. Key Compliance Definitions

These definitions were obtained from the Federal, DoD, and U.S. Army Regulations cited previously, and from 40 CFR 141, 142, and the Safe Drinking Water Act and its amendments.

- *Best Available Technology (BAT)* - the best technology treatment techniques, or other means which the administrator finds, examined for efficacy under field conditions and not solely under lab conditions that are available (taking cost into consideration). For the purposes of setting Maximum Contaminant Levels (MCLs) for synthetic organic chemicals, any BAT must be at least as effective as granular activated carbon.
- *Coagulation* - a process using coagulant chemicals and mixing by which colloidal and suspended materials are destabilized and agglomerated into flocs.
- *Community Water System* - a public water system that serves at least 15 service connections used by year round residents or regularly serves at least 25 of the same persons over 6 months per year.
- *Contaminant* - any physical, chemical, biological, or radiological substance or matter in water.

- ***Contaminated Water*** - water that has been intruded by micro-organisms, chemicals, wastes, or wastewater in a concentration that makes the water unfit for its intended use.
- ***Conventional Filtration Treatment*** - a series of processes including coagulation, flocculation, sedimentation, and filtration resulting in substantial particulate removal.
- ***Daily Average Temperature*** - the arithmetic mean of temperature measurements made hourly, or the mean value plot of the record of a continuous automated temperature recording instrument, either during a calendar month, or during the operating month if flows are of shorter duration.
- ***Daily Maximum Concentration*** - the daily determination of concentration for any calendar day.
- ***Daily Maximum Temperature*** - the highest arithmetic mean of the temperatures observed for any 2 consecutive hours during a 24-hour day, or during the operating day if flows are of shorter duration.
- ***Diatomaceous Earth Filtration*** - a process resulting in substantial particulate removal in which:
 - a precoat cake of diatomaceous earth filter media is deposited on a support membrane (septum), and
 - while the water is filtered by passing through the cake on the septum, additional filter media known as body feed is continuously added to the feed water to maintain the permeability of the filter cake.
- ***Direct Filtration*** - a series of processes including coagulation and filtration but excluding sedimentation resulting in substantial particulate removal.
- ***Disinfectant*** - any oxidant, including but not limited to chlorine, chlorine dioxide, chloramines, and ozone added to water in any part of the treatment or distribution process, that is intended to kill or inactivate pathogenic micro-organisms.
- ***Disinfectant Contact Time*** - ("T" in CT calculations) means the time in minutes that it takes for water to move from the point of disinfectant application or the previous point of disinfectant residual measurement to a point before or at the point where residual disinfectant concentration ("C") is measured. Where only one "C" is measured, "T" is the time in minutes that it takes for water to move from the point of disinfectant application to a point before or at where residual disinfectant concentration ("C") is measured. Where more than one "C" is measured, "T" is:

- for the first measurement of "C", the time in minutes that it takes for water to move from the first or only point of disinfectant application to a point before or at the point where the first "C" is measured and
 - for subsequent measurements of "C", the time in minutes that it takes for water to move from the previous "C" measurement point to the "C" measurement point for which the particular "T" is being calculated. Disinfectant contact time in pipelines must be calculated based on "plug flow" by dividing the internal volume of the pipe by the maximum hourly flow rate through that pipe. Disinfectant contact time within mixing basins and storage reservoirs must be determined by tracer studies or an equivalent demonstration.
- *Disinfection* - a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents.
 - *Domestic or Other Non-Distribution System Plumbing Problem* - a coliform contamination problem in a public water system with more than one service connection that is limited to the specific service connection from which the coliform-positive sample was taken.
 - *Filtration* - a process for removing particulate matter from water by passage through porous media.
 - *Flocculation* - a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical means.
 - *Good Management Practice (GMP)* - schedules of activities, prohibitions of practices, maintenance procedures, and other management procedures, to prevent or reduce the pollution of "water of the United States." GMPs also include the treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.
 - *Grab Sample* - an individual sample collected in less than 15 minutes.
 - *Gross Alpha Particle Activity* - the total radioactivity due to alpha particle emissions as inferred from measurements on a dry sample.
 - *Ground Water Under the Direct Influence of Surface Water* - refers to any water beneath the surface of the ground with:
 - significant occurrence of insects or other macro-organisms, algae, or large-diameter pathogens such as *Giardia lamblia*, or
 - significant and relatively rapid shifts in water characteristics such as turbidity,

temperature, conductivity, or pH which closely correlate to climatological or surface water conditions.

Direct influence must be determined for individual sources in accordance with criteria established by the State.

- *Legionella* - means a genus of bacteria, some species of which have caused a type of pneumonia called Legionnaires Disease.
- *Maximum Contaminant Level (MCL)* - the maximum permissible level of a contaminant in water that is delivered to the free-flowing outlet of the ultimate user of a public water system. Turbidity is the exception to this; the maximum permissible level for turbidity is measured at the point of entry to the distribution system. Contaminants added to the water under circumstances controlled by the user, except those resulting from corrosion of piping and plumbing caused by water quality, are excluded from this definition.
- *Maximum Contaminant Level Goal (MCLG)* - refers to the maximum level of a contaminant in drinking water at which no known or anticipated adverse effect on the health of persons would occur, and which allows an adequate margin of safety. Maximum contaminant level goals are nonenforceable health goals.
- *Maximum Total Trihalomethane Potential* - means the maximum concentration of total trihalomethanes produced in a given water containing a disinfectant residual after 7 days at a temperature of 25 degrees Celsius or above.
- *Near the First Service Connection* - means at 1 of the 20 percent of all service connections in the entire system that are nearest the water supply treatment facility, as measured by water transport time within the distribution system.
- *Non-Community Water System* - a public water system that is not a community water system.
- *Non-Transient, Non-Community Water System (NTNCWS)* - a public water system that is not a community water system and that regularly serves at least 25 of the same persons over 6 months per year.
- *Palatable Water* - water that is pleasing to the taste and free of objectionable color, turbidity, taste, or odor. Palatability does not imply potability.
- *Person* - an individual, corporation, company, association, partnership, municipality, or state, Federal, or tribal agency.
- *Picocurie (pCi)* - quantity of radioactive material producing 2.22 nuclear transformations/ minute.

- *Point of Disinfectant Application* - the point where the disinfectant is applied and water downstream of that point is not subject to recontamination by surface water runoff.
- *Point-of-Entry Treatment Device* - a treatment device applied to the drinking water entering a house or building for the purpose of reducing contaminants in the drinking water distributed throughout the house or building.
- *Point-of-Use Treatment Device* - a treatment device applied to a single tap used for the purpose of reducing contaminants in drinking water at that one tap.
- *Population Served* - the number of base residents served plus one-third of the nonresidents usually served by the system (revised rules are under consideration).
- *Potable Water* - water that has been examined and treated to meet the proper standards and declared by responsible authorities to be fit for drinking.
- *Primacy (Primary Enforcement Responsibility)* - the primary responsibility for administration and enforcement of primary drinking water regulations and related requirements applicable to public water systems within a state.
- *Public Water System* - a system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. This term includes:

any collection, treatment, storage, and distribution facilities under control of the operator of such system, and

any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system.

A public water system is either a "community water system" or a "noncommunity water system."

- *Raw Water*

untreated water that enters the first unit of a water treatment plant; or water used as a source of water supply taken from a natural or impounded body of water, such as a stream, lake, pond, or underground aquifer.

- *Rem* - the unit of dose equivalent from ionizing radiation to the total body or any internal organ or organ system. A millirem (mrem) is 1/1000 of a rem.

- ***Residual Disinfectant Concentration*** - ("C" in CT calculations) is the concentration of disinfectant measured in mg/l in a representative sample of water.
- ***Sanitary Survey*** - an on-site review of the water source, facilities, equipment, operation and maintenance of a public water system for the purpose of evaluating the adequacy of such source, facilities, equipment, operation and maintenance for producing and distributing safe drinking water.
- ***Sedimentation*** - a process for removal of solids before filtration by gravity or separation.
- ***Slow Sand Filtration*** - a process involving passage of raw water through a bed of sand at low velocity (generally less than 0.4 m/h) resulting in substantial particulate removal by physical and biological mechanisms.
- ***Standard Sample*** - the aliquot of finished drinking water that is examined for the presence of coliform bacteria.
- ***State*** - the agency of the state or tribal government that has jurisdiction over public water systems. During any period when a state or tribal government does not have primary enforcement responsibility pursuant to Section 1413 of the Act (42 USC 300g-2), the term "state" means the Regional Administrator of the USEPA.
- ***Superintendent*** - an individual who is designated by any employing or appointing person, county, municipality, sanitary district, or state as the individual responsible for operation of a waterworks, wastewater works, or industrial wastewater works.
- ***Supplier of Water*** - any person who owns or operates a public water system.
- ***Surface Water*** - all water that is open to the atmosphere and subject to surface runoff.
- ***System with a Single Service Connection*** - a system which supplies drinking water to consumers via a single service line.
- ***Total Trihalomethanes (TTHM)*** - the sum of the concentration in milligrams per liter of the trihalomethane compounds (trichloromethane [chloroform], dibromochloromethane, bromodichloromethane, and tribromomethane [bromoform]) rounded to two significant figures.
- ***Trihalomethane (THM)*** - one of the family of organic compounds, named as derivatives of methane, wherein three of the four hydrogen atoms in methane are each substituted by a halogen atom in the molecular structure.

- ***Virus*** - means a virus of fecal origin which is infectious to humans by water-borne transmission.
- ***Waterborne Disease Outbreak*** - the significant occurrence of acute infectious illness, epidemiologically associated with the ingestion of water from a public water system which is deficient in treatment, as determined by the appropriate local or State agency.
- ***Watershed*** - the area of land that drains into a particular watercourse or water body.

SAFE DRINKING WATER ACT (SDWA)

Records to Review:

- Bacterial and chemical analyses of drinking water, including sampling dates and locations, dates of analyses, analytical methods used, and results of analyses
- Monthly operating reports (flow, chlorine residual, etc.)
- State and public notification of noncompliance with primary drinking water regulations
- Action taken by the facility to correct violations of primary drinking water regulations
- Sanitary surveys of the water system conducted by the facility, a private consultant, or any local, state, or Federal agency
- Public notification of noncompliance with secondary MCL for fluoride
- Variance or exemption granted to the facility for its water supply system
- Permit authorizing the operation of an underground injection well
- Records of planning and construction of injection wells
- Results of injection well monitoring
- Records, including any petition for review, of facility projects that may potentially cause contamination of a sole source aquifer through its recharge zone
- Design plans for potable water treatment plant
- Name and phone number of operator of drinking water plant
- Swimming pool/beaches operator
- Lab operators water quality
- Potable water wells data
- Permits

Physical Features to Inspect:

- Drinking water collection, treatment, and distribution facilities
- On-site laboratory analysis facilities
- Swimming pools
- Underground injection wells

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Chief of Operations and Maintenance (O&M)

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:

3-18 (Continued)

Sampling Schedule (1)(2)(3):

- Community water system:
 - determine if sampling schedule meets minimum criteria as specified in Appendix 3-5.
- Non-community water system:
 - determine if the sampling schedule in Appendix 3-6 is met.

Verify samples are collected at regular time intervals throughout the month (1)(2)(3):

- Ground water-supplied system (not including ground water under the direct influence of surface water) which serves 4,900 persons or less:
 - this system may collect all samples on a single day if taken from different sites.
- System using surface water or ground water under the direct influence of surface water which does not practice filtration in compliance with 40 CFR 141 Subpart H
 - this system must collect at least one sample near the first service connection each day the turbidity level of the source water exceeds 1 NTU. This sample must be analyzed for total coliforms.

If one or more turbidity measurements in any day exceed 1 NTU, verify the system collects this coliform sample within 24 hours of the first excess, unless the State determines that for non-system logistical reasons, the sample cannot be analyzed within 30 hours of collection.

Verify these sample results are included in determining the MCL for total coliforms.

Verify that the analysis is conducted in accordance with approved methods.

(NOTE: Check samples are not included in calculating the total number of samples taken for compliance.)

| Benzene * | 0.005 |
| Vinyl Chloride * | 0.002 |
| Carbon Tetrachloride * | 0.005 |
| 1,2-Dichloroethane * | 0.005 |
| Trichloroethene * | 0.005 |
| 1,1-Dichloroethylene * | 0.007 |
| 1,1,1-Trichloroethane* | 0.020 |
| para-Dichlorobenzene * | 0.075 |

- * The effective date for these organic contaminants is January 9, 1989 for community water systems and nontransient, noncommunity systems.

Appendix 3 - 5

Total Coliform Monitoring Frequency for Community Water Systems (40 CFR 141.21(a)(2))

| Population served per month | Minimum number of samples per month |
|--------------------------------|--|
| 25 to 1,000* | 1 |
| 1,001 to 2,500 | 2 |
| 2,501 to 3,300 | 3 |
| 3,301 to 4,100 | 4 |
| 4,101 to 4,900 | 5 |
| 4,901 to 5,800 | 6 |
| 5,801 to 6,700 | 7 |
| 6,701 to 7,600 | 8 |
| 7,601 to 8,500 | 9 |
| 8,501 to 12,900 | 10 |
| 12,901 to 17,200 | 15 |
| 17,201 to 21,500 | 20 |
| 21,501 to 25,000 | 25 |
| 25,001 to 33,000 | 30 |
| 33,001 to 41,000 | 40 |
| 41,001 to 50,000 | 50 |
| 50,001 to 59,000 | 60 |
| 59,001 to 70,000 | 70 |
| 70,001 to 83,000 | 80 |
| 83,001 to 96,000 | 90 |
| 96,001 to 130,000 | 100 |
| 130,001 to 220,000 | 120 |
| 220,001 to 320,000 | 150 |
| 320,001 to 450,000 | 180 |
| 450,001 to 600,000 | 210 |
| 600,001 to 780,000 | 240 |
| 780,001 to 970,000 | 270 |
| 970,001 to 1,230,000 | 300 |
| 1,230,001 to 1,520,000 | 330 |
| 1,520,001 to 1,850,000 | 360 |
| 1,850,001 to 2,270,000 | 390 |
| 2,270,001 to 3,020,000 | 420 |
| 3,020,001 to 3,960,000 | 450 |
| 3,960,001 or more | 480 |

* Includes public water systems which have at least 15 service connections, but serve fewer than 25 persons.

Appendix 3 - 6

Total Coliform Monitoring Frequency for Non-Community Water Systems¹

| Water Source | Population Served | Minimum Monitoring Frequency | Effective Date of Requirement |
|--|--------------------|---------------------------------------|-----------------------------------|
| Surface | any | Same as CWS ² | Beginning Dec. 31, 1990 |
| Ground | 1 > 1,000 | Same as CWS ² ³ | Beginning Dec. 31, 1990 |
| Ground | > 1,000 | State discretion ⁴ | Dec. 31, 1990 until June 29, 1994 |
| Ground | > 1,000 | State discretion | After June 29, 1994 |
| Ground water under direct influence of surface water | Any classification | Same as CWS ² | Within one year of State |

¹ Includes both transient and non-transient non-community water systems.

² System must monitor at same frequency as a like-sized community water system.

³ State may reduce the monitoring frequency for any month the system serves 1,000 persons or fewer.

⁴ State may not permit a system to monitor less than once per year.

"CWS" means Community Water System.

Appendix 3 - 7

Monitoring Requirements Following a Total Coliform-Positive Routine Sample

| No. samples/month | No. repeat samples ¹ | No. routine samples next month ² |
|-------------------|---------------------------------|---|
| 1 or less | 4 | 5 |
| 2 | 3 | 5 |
| 3 | 3 | 5 |
| 4 | 3 | 5 |
| 5 or more | 3 | See Appendix 3-1 ³ |

¹ Number of repeat samples in the same month for each total coliform-positive routine sample.

² Except where State has invalidated the original routine, or where State substitutes an on-site evaluation of the problem, or where the State waives the requirement on a case-by-case basis. (See 40 CFR 141.21a(b)(5) for more details.)

³ Systems need not take any additional samples beyond those it is required to take according to Appendix 3-1.

NOTES:

- (1) The MCL for microbiological contaminants is based on the presence or absence of total coliforms in a sample, rather than coliform density.
- (2) Facilities testing <40 samples per month may have one total coliform-positive result and still be in compliance with the total coliform MCL. Those testing ≥ 40 samples per month may have no more than 5 percent total coliform-positive results and still be in compliance with the total coliform MCL (40 CFR 141.63(a)(1), 40 CFR 141.63(a)(2)).
- (3) Any fecal coliform-positive repeat sample or *E. coli*-positive repeat sample, or any total coliform-positive repeat sample following a fecal coliform-positive or *E. coli*-positive routine sample constitutes a violation of the MCL for total coliforms. This is a violation that may pose an acute risk to health for public notification requirement purposes in 40 CFR 141.32 (40 CFR 141.63(b)).

Appendix 3 - 8

Turbidity (40 CFR 141.13)

1 TU (turbidity unit) as determined by a monthly average pursuant to 40 CFR 141.22*

5 TU based on an average for two consecutive days pursuant to 40 CFR 141.22

* This figure is subject to one exception. Five or fewer turbidity units may be allowed if the supplier of water can demonstrate to the state that the higher turbidity does not do any of the following:

- interfere with disinfection
- prevent maintenance of an effective disinfectant agent throughout the distribution system, or
- interfere with microbiological determinations.

Appendix 3 - 9

Natural Radioactivity (40 CFR 141.15)

| <i>Contaminant</i> | <i>MCL (pCi/L)</i> |
|------------------------------------|--------------------|
| Combined radium-226 and radium-228 | 5 |
| Gross alpha particle activity* | 15 |

* This includes radium-226 but excludes radon and uranium.

Manmade Radioactivity (40 CFR 141.16)

1. Average annual concentrations assumed to produce a total body or organ dose of 4 millirem (mrem)/year

| <i>Radionuclide</i> | <i>Critical Organ</i> | <i>pCi/L</i> |
|---------------------|-----------------------|--------------|
| Tritium | total body | 20,000 |
| Strontium-90 | bone marrow | 8 |

2. Detection Limits for Manmade Beta Particle and Photon Emitters*

| <i>Radionuclide</i> | <i>Detection Limit in pCi/L</i> |
|---------------------|---------------------------------|
| Tritium | 1,000 |
| Strontium-89 | 10 |
| Strontium-90 | 2 |
| Iodine-131 | 1 |
| Cesium-134 | 10 |
| Gross Beta | 4 |
| Other | 10% of the applicable limit |

* Additional standards for radioactivity from manmade radionuclides may be applicable where the source water is contaminated by effluent from nuclear facilities.

Appendix 3 - 10

Monitoring Requirements for Fecal or Total Coliforms for Systems That Do Not Provide Filtration

| System Size (persons served) | Samples/Week ¹ |
|------------------------------|---------------------------|
| <500 | 1 |
| 501 to 1,300 | 2 |
| 3,301 to 10,000 | 3 |
| 10,001 to 25,000 | 4 |
| >25,000 | 5 |

¹ Samples must be taken on separate days.

Section 4

**RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE C
(RCRA-C)**

SECTION 4

RCRA Subtitle C

A. Applicability of this Protocol

This protocol applies to Army installations that generate, store, treat, or dispose of any type of hazardous waste. Federal regulations establish 100 kilograms of hazardous waste or 1 kilogram of acute hazardous waste generated in any one calendar month as the minimum quantity of waste that requires full compliance with the regulations. Since this quantity is quite small (equivalent to 6 drums per year), it is likely that almost all Army installations will be affected by the regulations addressed in this protocol.

This protocol and its associated evaluation worksheets are necessarily more complex than other protocols in this volume. All evaluation items will not be applicable to all installations. Guidance is provided on the worksheets to direct the evaluator to the evaluation questions related to the type of hazardous waste activities/facilities on the installation. This protocol focuses on the hazardous waste Code of Federal Regulations (CFR) 40 CFR 260-271 since these are the primary regulations that affect most Army installations. However, installation environmental coordinators should determine the additional requirements mandated by their respective state regulations (if appropriate) and include evaluation questions on worksheets in the same format as shown in this protocol.

B. Federal Legislation

The Resource Conservation and Recovery Act (RCRA) (P.L. 94-580; 42 USC 6901) and its amendments mandated regulations that control hazardous waste from its origin to ultimate treatment, storage, or disposal. All Army installations are responsible for complying with these regulations. Installations located in states that have interim or final authorization to run their own RCRA program, are responsible for being knowledgeable of and following state requirements. While some state programs are identical to the Federal guidelines, others may have more stringent requirements.

The requirements of RCRA with respect to Federal facilities subject them to Federal, state, and local requirements just as any nongovernmental entity.

- RCRA Section 6001, *Application of Federal, State, and Local Law to Federal Facilities*, states that all branches of the Federal government, having jurisdiction over any solid waste management facility or disposal site, shall comply with Federal, state, and local solid waste or hazardous waste

disposal requirements. The President may exempt any solid waste management facility of any department if it is "in the paramount interest" of the United States. An exemption may be granted for 1 year.

There are several other sections of RCRA that have specific application to Federal facilities. These include:

- Section 3004(u), *Continuing Releases at Permitted Facilities* and Section 3004 (v), *Corrective Action Beyond Facility Boundary*, states that all treatment, storage, and disposal facilities must satisfy new requirements. These requirements involve:
 - a) identifying all solid waste management units at the facility
 - b) identifying releases of hazardous wastes or constituents that have occurred from those units
 - c) performing corrective action for those releases. These provisions are implemented through Army Regulation 200-1, *Environmental Protection and Enhancement*, and are covered in Section 16 of this manual, *Environmental Program Management*. The provisions apply to all regulated facilities, inactive and closed as well as operating units. All Federal facilities are subject to corrective action requirements to the same extent as any facility owned or operated by private parties.

Every Part B permit application submitted under RCRA must include schedules of compliance for corrective action (where corrective action cannot be completed before issuance of the permit) for all releases of hazardous waste or "constituents" from solid waste management units, regardless of when the waste was placed there. The permit applicant thus must provide full disclosure of all locations within the facility's boundaries where wastes may have been managed since the site was originally opened and must provide for action to abate any damage that any release of hazardous waste or constituents may have caused.

- Section 3004 also requires Federal agencies to operate under the same property-wide definition of "facility": the entire site under control of the owner or operator involved in hazardous waste management. In 1986, United States Environmental Protection Agency (USEPA) interpreted ownership to refer not to the United States as a whole but rather to individual Federal departments, agencies, and instrumentalities (51 Federal Register 7722 (1986)).
- Section 3007(c), *Inspections*, states that the Administrator will annually inspect all Federal agency hazardous waste treatment, storage, and disposal facilities. Additional state inspections of such facilities may also occur.

Facilities must, upon written request from the state, compile, publish, and submit information relating to on-site waste storage and disposal that has taken

place before permits were required. Specifically, the amount, nature, and toxicity of such waste must be ascertained; and any resulting health or environmental hazards must be assessed for this hazardous waste site inventory reporting these requirements.

Facilities are also required to inform the general public of toxic chemicals stored on site and any release of them, as defined in 40 CFR 372.65. This regulation is addressed in Section 7, CERCLA/SARA.

- Section 3016, *Inventory of Federal Agency Hazardous Waste Facilities*, provides that each Federal agency must submit to USEPA an inventory of the sites that it owns or operates or previously owned or operated where hazardous waste is or was stored, treated, or disposed at any time. The inventory should be submitted biennially and include the following information:

- Location of the site
- Amount and toxicity of the waste
- Extent of environmental contamination
- Current status of site
- List of disposal sites at the facility and monitoring reports
- Response actions
- Identification of waste treatment, storage, or disposal techniques
- Name and address of the responsible Federal agency for each site.

If a facility does not provide adequate information, the Administrator shall notify the chief official of that agency. If after 90 days an inventory has not been developed, the Administrator shall carry out the inventory. USEPA procedures for developing this inventory are modified every 2 years.

Applicable RCRA Subtitle F, *Federal Responsibilities*.

- Section 6002, *Federal Procurement*, states that each procuring agency must select those items made of the highest percentage of recovered materials practicable unless such items are unreasonable, fail to meet performance standards, or are only available at an unreasonable price.
- Section 6003, *Cooperation with Environmental Protection Agency*, states that all Federal agencies must make available all information required by the Administrator concerning past or present waste management practices and past or presently owned, leased, or operated solid or hazardous waste facilities.

- Section 6004, *Applicability of Solid Waste Disposal Guidances to Executive Agencies*, states that Executive Agencies must comply with Solid Waste Management Regulations where the Agency:
 - Has jurisdiction over real property or the operation of a facility that is involved in solid waste management
 - Generates solid waste and which, if conducted by a person other than the Agency, would require a permit or license to dispose of the waste.
- Section 9007, *Federal Facilities*, states that Federal facilities' underground storage tanks containing regulated substances or petroleum must comply with all Federal, state, and local requirements. Underground Storage Tanks are covered in Section 6 of this manual, RCRA Subtitle I. (Note: there are also requirements for hazardous waste storage tanks regulated under Subtitle C of RCRA.) The President may exempt a Federal agency from compliance if it is determined to be "in the paramount interest of the United States." The exemption is granted for 1 year and may only be renewed at 1-year intervals.

General and technical standards under RCRA for treatment, storage, and disposal (TSD) facilities are contained in two parts. Permitting standards, contained in 40 CFR 264, are applied through the RCRA permitting process and regulate long-term continued operation of a TSD facility. Interim status standards, contained in 40 CFR 265, regulate the operation of existing TSD facilities before receipt of a RCRA permit. The 40 CFR 264 standards are generally more complete and stringent. This protocol is based primarily on the 40 CFR 264 permitting standards. An exception is the use of 40 CFR 265 standards for accumulation points, which is allowed by the "less than 90 day storage" provisions of 40 CFR 262.34.

- *Land Disposal Restriction Program (LDR Program)*, 40 CFR 268 is unique in that it provides a catalyst for the banning of untreated wastes from land disposal. As of August 8, 1988, all land disposal methods including underground injection wells were covered by these regulations. Several categories of waste are covered by the "land-ban" rules. Also, many solvents are given special treatment standards. A list of wastes to be covered by the land-ban was established and divided into 3 parts. These parts (or "thirds") were gradually phased into the land-ban program. Refer to Appendix 4-4 for further information. Though referred to as the *California List Rule*, these wastes rules are applicable to all states. Congress adopted this list, which consists of liquid hazardous wastes containing metals,

cyanides, PCBs, corrosives with a pH of 2.0 or less or greater than 12.5 and liquid/nonliquid hazardous wastes containing halogenated organic compounds. For more information on the "California List" see Appendix 4-7.

A complete review of 40 CFR parts 260 through 270 is required as well as state regulations to adequately assess the installation's hazardous waste management program. Appendix 4-2 through 4-7 are not intended to be comprehensive of all hazardous waste information.

- 40 CFR 260 - *Hazardous Waste Management System: General.*
- 40 CFR 261 - *Identification and Listing of Hazardous Waste.*
- 40 CFR 262 - *Standards Applicable to Generators of Hazardous Waste.*
- 40 CFR 263 - *Standards Applicable to Transporters of Hazardous Waste.*
- 40 CFR 264 - *Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities.*
- 40 CFR 265 - *Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities.*
- 40 CFR 266 - *Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities.*

- 49 CFR 172 - *Transportation of Hazardous Waste.*
through
49 CFR 179

C. State/Local Requirements

Many states have met USEPA requirements in 40 CFR 271 and have been authorized to manage their own state programs. RCRA encourages states to develop hazardous waste statutes and to operate regulatory programs in lieu of the Federal USEPA-managed program. Many states have adopted the USEPA regulations by reference or have promulgated regulations identical to the USEPA regulations. Several other states have developed hazardous waste regulatory programs that are substantially equivalent to the Federal program or have

implemented programs significantly more stringent than the USEPA program. These differences between individual state regulations and the Federal program require that evaluators check the status of the state's authorization and then determine which regulations apply. Since the protocol worksheets are based exclusively on the requirements of the Federal RCRA/USEPA program, it is necessary to determine in what ways the applicable state program differs from the RCRA/USEPA program.

In all cases, the most stringent regulations should be followed.

D. DoD Regulations

There are two DoD Policy Memorandums that address hazardous waste and are applicable to Army installations:

- Defense Environmental Quality Program Policy Memorandum (DEQPPM) 80-5, *DoD Hazardous Material Disposal Policy*, designates the Defense Logistics Agency as the single manager for disposal of hazardous materials within DoD. This policy is implemented through regional Defense Reutilization and Marketing Offices (DRMOs) around the country that are responsible for managing the off-site disposal of hazardous wastes for Army installations.
- DEQPPM 80-8, *RCRA Hazardous Waste Management Regulations*, establishes management procedures for implementing the DoD Hazardous Waste Management Program.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 6, defines Army policy and procedures for managing hazardous waste, including resource recovery, recycling, waste reduction, and training programs.

The hazardous waste management program requirements of AR 200-1 are that Army, USAR, and ARNG installations and tenants will be aware of and comply with all applicable laws (Federal, state, and local); ensure that program and budget requests identify resource requirements to carry out management duties; encourage the use of joint or regional facilities to minimize costs; minimize generation and land disposal of hazardous wastes; prohibit the storage of hazardous wastes in underground storage tanks; conform to all laws, including international laws, on ocean dumping; and in general, "generate, transport, treat, store, and dispose of wastes such as pesticides, hazardous chemical stocks,

medical, dental, and veterinary supplies, radioactive materials, propellant, explosive, and pyrotechnic materials (PEP), explosive ordnance, or chemical warfare agents in a manner that protects public health and the environment" (para. 6-2).

- Army Regulation (AR) 420-47, *Solid and Hazardous Waste Management*, remains in force with the exception of Chapters 5 and 6, Appendix A, B, and C, and the glossary, which have been superseded by AR 200-1. The remaining chapters cover responsibilities regarding solid and hazardous waste, collection and storage of both solid and hazardous waste, thermal processing and land disposal of solid (nonhazardous) waste, and monitoring records.

F. Key Compliance Requirements

- Generator Requirements - Any Army installation that generates at least 100 kg/month (approximately one-half drum) of hazardous waste or 1 kg/month of acute hazardous waste is required to conduct analysis of the wastes; properly label, store, or otherwise manage the wastes on-site; prepare manifests; comply with state and Federal reporting requirements; and properly dispose of its hazardous waste off-site. Hazardous wastes may either be wastes that appear in USEPA's "Listed Wastes" in 40 CFR 261, or are wastes that demonstrate characteristics of ignitability (flashpoint less than 140°F), corrosivity (pH less than 2.0 or greater than 12.5), reactivity, or exhibit characteristics of toxicity. Typically, an Army installation will generate solvents, waste oils, paint, and paint sludges.

A generator of hazardous wastes needs to have an USEPA ID number, but does not need a permit if waste is stored on the installation for less than 90 days.

(Note: there are deviations from the 90-day storage requirement for small quantity generators [100-1000 kg/month].)

- Installation Hazardous Waste Management Plan - Each installation commander will ensure that a written hazardous waste management plan is maintained to provide installation personnel with procedures and responsibilities to manage hazardous wastes consistent with all applicable laws and regulations. The Directorate of Engineering and Housing (DEH) will prepare the plan and provide copies to all facility personnel that generate, transport, treat, store, and dispose of hazardous waste. The plan will be signed by the IC and will:
 - include responsibilities of installation organizations and personnel in generating, treating, storing, and disposing of hazardous waste

- show USEPA and state identification numbers to generate, treat, store, dispose of, transport, or offer for transportation hazardous wastes
 - specify the type and quantity of hazardous waste for each hazardous waste generating activity (including tenants)
 - describe waste minimization projects, funds, and saving
 - identify the location of all hazardous waste TSDFs
 - describe installation procedures to treat, store, dispose of, transport on-post, or offer for transport off-post hazardous waste, consistent with the requirements of 40 CFR 260-271, *Hazardous Waste Management*, including requirements of a RCRA permit
 - include procedures to analyze hazardous wastes; include procedures to inspect the hazardous waste units for malfunction and deterioration, operator errors, and discharges that may be causing, or may lead to release of hazardous waste constituents to the environment, or a threat to human health
 - include procedures to prevent unauthorized entry to the hazardous waste units
 - describe the program to train all applicable facility personnel with Federal, state, and Army requirements to ensure compliance with RCRA
 - include procedures of the contingency plan to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water, consistent with requirements of 40 CFR 264 Subpart D
 - include procedures to temporarily treat, store, and dispose of hazardous waste if the use of existing facilities is unavailable, identifying temporary storage facilities, alternate disposal site, and handling procedures
 - include a copy of the RCRA operating record, if applicable
 - include a copy of the RCRA permit, if applicable
 - reference the location of the Spill Prevention Contingency and Countermeasure Plan (SPCCP) and the Installation Contingency Spill Plan (ICSP), and summarize emergency reporting information for reporting and containing spills and illegal dumping (see Section 7 of this manual)
 - include references for obtaining technical information on determining if a waste is hazardous; the location of off-site RCRA approved TSDFs; the names of state and Federally approved hazardous waste transporters; and the names and addresses of state and Federal regulatory agencies administering the RCRA program.
- **Transport Requirements** - Containers of hazardous waste shipped off-post must be properly labeled. The labels should identify the waste and its hazard class. Shipments from the installation to a DRMO off-post must also be accompanied by manifests and are subject to the full transportation requirements as stipulated in DOT hazardous materials transportation regulations.

- **Accumulation Point Management** - An accumulation point is an area in or near the workplace where hazardous waste is accumulated before being turned in to DRMO for disposal. Storage in these areas is temporary and must not exceed 90 days from the time the first waste begins to accumulate in the container. Permits are not required for accumulation points, but certain controls relative to spill containment, inspections, and training are required. (Note: some installations may operate satellite accumulation points where up to 55 gallons of hazardous waste or 1 quart of acute hazardous waste may be accumulated provided the requirements in 40 CFR 262.34 [accumulation time] are met.)
- **Permitted TSD Facilities Requirements** - The operation of a treatment, storage, and/or disposal facility is subject to regulation and permitting under Federal or state regulations. These regulations are both administrative and technical. The administrative standards require that various plans be developed to ensure that emergencies can be dealt with, that waste received is properly identified, and that operating personnel are adequately trained to operate the facility and respond to emergencies. These administrative standards also include requirements that the facility be inspected routinely, that records of operations are compiled and maintained, and that reports of both routine and contingency operations are made to the applicable regulatory agency. The administrative standards also require that a plan for ceasing operations and closing the facility be developed, kept on-hand, and updated frequently.

The technical standards applicable to treatment, storage, and disposal facilities fall into two classes: general standards that apply to all TSD facilities and specific standards that apply to various types of facilities, i.e., container storage areas, tanks, surface impoundments, waste piles, land treatment facilities, incinerators, landfills, thermal treatment facilities, and chemical, physical, biological treatment facilities.

Administrative and technical facility standards are applied to a particular facility through an RCRA permit issued to a facility. Existing facilities which have not been issued an RCRA permit are considered to be in interim status and can continue to operate if they comply with the RCRA mandated Interim Status Standards (ISS). These ISS (which are contained in 40 CFR 265) are similar in scope to the permit standards contained in 40 CFR 264, but are generally less stringent and require less facility modifications or improvements.

G. Responsibility for Compliance

- **The Installation Commander** - The installation commander is responsible for establishing and maintaining an active program of surveillance of the users of hazardous materials; generators, transporters, and storers of hazardous wastes; the waste minimization program; and disposal activities. By DoD direction, the

installation commander is responsible for compliance with RCRA and state regulations involving host and tenant organizations on the installation. The commander signs all permit applications and reports submitted to USEPA or state agencies as part of this overall management responsibility. In the event that the installation commander is not a colonel or higher or commands less than 250 persons, RCRA permit applications must be referred up the chain of command to an official in the grade of colonel or higher for signature. In either case, operational responsibility for the hazardous waste program rests with the activities that generate, treat, store, transport, or dispose the waste and the activities responsible for implementing health, safety, and environmental protection programs.

- Directorate of Engineering and Housing (DEH) and Directorate of Safety and Health (DSH) - The DEH/DSH will serve as the installation commander's (IC's) expert representative for the management of all wastes, unless otherwise directed by the IC.

In the area of compliance, the DEH/DSH will immediately advise the IC on the receipt of enforcement notices, such as Notice of Violations (NOVs), consent orders, or RCRA compliance agreements; advise all waste generating activities on state, Federal, host nation, and Army requirements for managing hazardous waste, including requirements for permits and reporting and recordkeeping; prepare all required reports on hazardous waste, including the biennial report (USEPA Form 8700-13 A), the A-106 report (see Section 16), and the annual hazardous waste report; monitor installation compliance with Federal, state, local, and host nation hazardous waste requirements, including activities of tenants and subinstallations; prepare and monitor compliance with the hazardous waste management plan that establishes procedures and responsibilities for managing hazardous wastes.

In the area of waste management (including disposal), the DEH/DSH will advise the IC, in coordination with generating activities, on the most cost-effective and efficient means of waste storage, treatment, and disposal; provide technical assistance and guidance to hazardous waste generating activities, tenants, and operators of RCRA hazardous waste TSDFs; provide for analysis of waste to determine if it is hazardous under applicable laws; ensure hazardous wastes are properly identified, segregated, and weighed before treatment, storage, disposal, or transportation; certify that wastes are hazardous wastes and provide copies of waste analysis before arranging for off-post transportation; coordinate an annual installation-wide inventory of all hazardous waste, and identify the waste generating activities; establish, monitor, and execute programs in waste management, including waste minimization, resource recovery, and recycling.

- **Director of Logistics (DOL)** - The DOL will monitor installation-wide use of hazardous materials to ensure progress in meeting Federal and Army hazardous waste minimization goals and requirements, and provide quarterly progress reports to the DEH. On a semi-annual basis, the DOL will recommend opportunities and provide a progress report to the IC in reducing the use and toxicity of hazardous materials, following the concurrence of the DEH.

Additionally, the DOL will arrange for and monitor all on-post and off-post shipments of hazardous waste, ensuring compliance with applicable laws and requirements; prepare and maintain records on transporting hazardous wastes, including manifests, and records maintained by the DRMO where colocated on an Army installation; sign the hazardous waste manifest as the IC's designee; coordinate with the DEH to obtain certification that wastes meet the Federal and state definition of hazardous wastes before offering for off-post transportation; advise waste generating activities on proper requirements for packaging, labelling, and shipping of solid waste and hazardous waste to enable the DOL to ensure that off-post transportation of these wastes conforms with Federal, state, Army, DoD, and host nation requirements; actively support the DEH in measuring progress to meet Federal and Army waste reduction goals and requirements; and communicate regularly with the Defense Logistics Agency (DLA) activity serving the installation to maintain current information on markets for hazardous wastes.

- **Commanders of medical department activities (MEDDACs) and U.S. Army Medical Centers (MEDCENS)** - MEDDAC and MEDCEN commanders will: Provide the IC or IC's designee with the hazardous waste management implications of new and revised MEDDAC/MEDCEN practices for review and concurrence; and prepare and maintain a management plan for the disposal of medical waste.
- **Installation preventive medicine services (PVNTMED)** - Installation PVNTMED personnel will support the hazardous waste management programs, provide technical assistance in identifying wastes and inventorying sources of hazardous wastes, and represent the MEDDAC/MEDCEN as an installation tenant and hazardous waste generator.
- **Installation safety officers** - The installation safety officer (for ARNG, the state safety officer) will monitor the storage, packaging, transportation, treatment, storage, and disposal of waste, and personnel training requirements to ensure compliance with Federal, state, and Army safety standards.
- **Chief, installation public affairs office (PAO)** - PAO will establish the necessary supporting public affairs program; coordinate and conduct public involvement to obtain an RCRA permit and RCRA permit modifications, including an Environmental Assessment (EA) or Environmental Impact Statement (EIS);

and assist the commander in preparing for any public hearings or public meetings sponsored by USEPA or states to issue or modify an RCRA permit for the installation.

- Tenants (Federal and non-Federal) - Tenants (such as the DRMO) on Army properties or where the Army is a tenant on non-Army property will comply equally with all laws and requirements.
- Managers of Government-owned contractor-operated (GOCO) facilities - GOCOs that produce hazardous waste on Army installations will: Apportion fees to support the treatment, storage, and disposal of hazardous wastes; establish administrative requirements to preclude the Federal Government from incurring liability associated with treatment, storage, or disposal of hazardous wastes; prohibit the use of DoD personnel in handling solid and hazardous wastes; comply with Federal and state laws and regulations and Army policies on reducing the volume, quantity, or toxicity of hazardous waste; prohibit the use of on-site hazardous waste treatment, storage, and disposal facilities for non-DoD owned hazardous wastes generated off-site; pay fines assessed by state and Federal regulatory agencies for noncompliance (the Army cannot reimburse for such fines).
- Hazardous Waste Generators - Generators will properly identify, label, package, treat, store, dispose of, measure, transport on-post, or offer for transport off-post, hazardous wastes per requirements of RCRA, DOT, and the installation hazardous waste management plan (IHWP). Also, generators will ensure that all hazardous wastes generated during operations are certified by the DEH and tracked to minimize the potential for worker exposure, spills, or mixture with nonhazardous wastes; maintain accountability for and document the flow of hazardous materials from the point of receipt to point of turn-in for disposal; minimize waste generation wherever possible and feasible; provide the DEH with the information necessary to prepare reports per the hazardous waste management plan; maintain an accurate inventory of hazardous waste that reflects changes in operation.
- Hazardous Waste Treatment, Storage, and Disposal Facility (TSDF) Operators - Each TSDF operator is responsible for ensuring compliance with hazardous waste regulations and permit standards applicable to the facility including maintaining operational and training records.
- Defense Reutilization and Marketing Service (DRMS) - This agency may or may not be located on the installation. Regardless, it is the single agency designated by DoD to provide hazardous waste disposal service to the installation on a pay-for-services-rendered basis. The DRMS is responsible for compliance with all USEPA, state, and Army (including installation guidance) regulations at its storage/disposal facility.

H. Key Compliance Definitions

These definitions were obtained from the Federal, DoD, and U.S. Army regulations cited previously.

- *Aboveground Tank* - a device that meets the definition of a "tank" in 40 CFR 260.10 and that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) is able to be visually inspected.
- *Accumulation Point* - an area that can store up to 55 gallons of hazardous waste.
- *Acute Hazardous Waste* - any waste listed under 40 CFR 261.31 - 261.33(c) with a hazard code of "H." These include USEPA Hazardous waste numbers: F020, F021, F022, F023, F026, and F027.
- *Ancillary Equipment* - any device including, but not limited to piping, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of hazardous waste from its point of generation to a storage or treatment tank(s), between hazardous waste storage and treatment tanks to a point of disposal on-site, or to a point of shipment off-site.
- *Best Practically Available Treatment (BPAT)* - the treatment that yields the greatest environmental benefit.
- *Component* - refers to either the tank or the ancillary equipment of the tank system.
- *Consignee* - the ultimate treatment, storage, or disposal facility in a receiving country to which the hazardous waste will be sent.
- *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled.
- *Corrosion Expert* - a person who, by reason of knowledge of the physical sciences and the principles of engineering and mathematics, acquired by a professional education and related practical experiences is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be certified as being qualified by the National Association of Corrosion Engineers (NACE) or be a registered professional engineer who has certification and licensing that includes education and experience in corrosion control and or buried or submerged metal piping systems or tanks.

- **Debris** - materials that are primarily non-geologic in origin such as grasses and shrubs, and man-made materials such as concrete, clothing, partially buried whole or crushed empty drums, capacitors, and other synthetic manufactured items. This may also include geologic materials identified as not indigenous, or indigenous rocks exceeding a total size that will affect the performance of the available treatment technology.
- **Disposal** - the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including groundwaters.
- **Elementary Neutralization Unit** - a device used for neutralizing only those hazardous wastes that exhibit corrosivity (as defined in 40 CFR 261.22) or are listed in Subpart D of 40 CFR 261 only because of corrosivity and meet the definition of tank, tank system container, transport vehicle, or vessel in 40 CFR 261.10.
- **Existing Tank System or Existing Component** - a tank system or component that is used for the storage or treatment of hazardous waste and that is in operation, or for which installation has commenced on or before July 14, 1986. Installations will have been considered to be commenced if the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system and if either (1) a continuous on-site physical construction of the site or installation program has begun, or (2) the owner or operator has entered into contractual obligations that cannot be canceled or modified without substantial loss for physical construction of the site or installation of the tank system to be completed within a reasonable time.
- **First Third Wastes** - wastes included in the first one third of the schedule of restricted hazardous wastes listed in 40 CFR 268.10.
- **Full Regulation** - those regulations applicable to generators of greater than 1,000 kg of nonacutely hazardous wastes in a calendar month.
- **Generator** - a business or organization that produces hazardous waste in quantities greater than 1,000 kilograms per month.
- **Hazardous Waste** - a hazardous waste as defined in 40 CFR 261.3.

- ***Incinerator*** - an enclosed device using controlled flame combustion, the primary purpose of which is to thermally break down hazardous waste. Examples include: rotary kiln, fluidized bed, and liquid injection incinerators.
- ***Individual Generation Site*** - the contiguous site at or on which one or more hazardous wastes are generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste, but is considered a single or individual generation site if the site or property is contiguous.
- ***In-ground Tank*** - a device meeting the definition of "tank" in 40 CFR 260.10 whereby a portion of the tank is situated to any degree within the ground, thereby preventing visual inspection of that external surface area of the tank.
- ***Installation Inspector*** - a person who by means of his knowledge of the physical sciences and the principles of engineering, acquired by a professional education and related practical experience, is qualified to supervise the installation of tank systems.
- ***Land Disposal*** - includes, but is not limited to, any placement of hazardous waste in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt dome formation, underground mine or cave, or placement in a concrete vault or bunker intended for disposal purposes.
- ***Land Treatment Facility*** - a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure.
- ***Landfill*** - a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a land treatment facility, a surface impoundment, or an injection well.
- ***Large Quantity Generator*** - see Generator.
- ***Leak Detection System*** - a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary structure. Such a system must employ operational controls (e.g., daily visible containment for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to detect continuously and automatically the failure of the primary or secondary containment structure or the presence of a release of hazardous waste into the secondary containment structure.

- **Liquid** - a material that has a vertical flow of over 2 inches (50 mm) within a 3-minute period, or a material having 1 gram (1g) or more liquid separation, when determined in accordance with the procedures specified in ASTM D-4359-84 *Standard Test Method for Determining Whether a Material is a Liquid or Solid*, 1984 edition.
- **Manifest** - the shipping document originated and signed by the generator containing the information required by 40 CFR 262, Subpart B.
- **Manifest Document Number** - the serially increasing number assigned to the manifest by the generator for recording and reporting purposes.
- **Miscellaneous Unit** - a hazardous waste management unit where hazardous waste is treated, stored, or disposed of and that is not a container, tank, surface impoundment, pile, land treatment unit, landfill, incinerator, boiler, industrial furnace, underground injection well with appropriate technical standards under 40 CFR 146, or is eligible for a research development and demonstration permit under 40 CFR 270.65.
- **Movement** - that hazardous waste transported to a facility in an individual vehicle.
- **New Tank System or New Component System** - a tank system or component that will be used for the storage and treatment of hazardous waste and for which installation has commenced after July 14, 1986; except, however, for purposes of 40 CFR 264.193(g)(2) and 265.193 (g)(2), a new tank system is one for which construction commences after July 14, 1986. (See also existing "tank system.")
- **On-Ground Tank** - a device meeting the definition of "tank" in 40 CFR 260.10 and that is situated in such a way that the bottom of the tank is on the same level as the adjacent surrounding surface so that the external tank bottom cannot be visibly inspected.
- **On-Site** - the same continuous property which may be divided by a public right-of-way with access between the separate portions by crossing as opposed to going along the right-of-way.
- **Pile** - any noncontainerized accumulation of solid, nonflowing hazardous waste that is used for treatment or storage.
- **Practical Quantification Limits (PQLs)** - the lowest concentration level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions.

- **Primary Exporter** - any person who is required to originate the manifest for a shipment of hazardous waste in accordance with 40 CFR 262 Subpart B or an equivalent state provision, which specifies a treatment, storage, or disposal facility in a receiving country as the facility to which the hazardous waste will be sent, and any intermediary arranging for the export.
- **Prohibited Wastes** - restricted wastes that are currently ineligible for land disposal (i.e., the prohibition effective date has passed, the waste does not meet all applicable treatment standards or prohibition levels, and no extensions, "no migration" exemptions, or national variances apply).
- **Receiving Country** - a foreign country to which a hazardous waste is sent for the purpose of treatment, storage, or disposal (except short-term storage incidental to transportation).
- **Restricted Wastes** - those categories of hazardous wastes that are prohibited from land disposal either by regulation or by statute, in other words, a hazardous waste that is restricted no later than the date of the deadline established in RCRA Section 3004.
- **Satellite Accumulation Point** - an area where less than 55 gallons of hazardous waste or 1 quart of acutely hazardous waste is stored.
- **Second Third Wastes** - wastes included in the second one-third of the schedule of restricted hazardous wastes listed in 40 CFR 268.10.
- **Small Quantity Generator** - a business or organization that produces hazardous waste in quantities greater than 100 kilograms per month but less than 1,000 kilograms per month.
- **"Soft Hammer" Provisions** - apply to any first third (and second third) wastes for which USEPA fails to set treatment standards and effective dates by the statutory deadlines set forth in 40 CFR 268.10-12. For first third wastes, the deadline is August 8, 1988 and applies until May 8, 1990, or until USEPA promulgates treatment standards, whichever is sooner. These provisions conditionally allow for the disposal of such wastes in a landfill or surface impoundment.
- **Soil** - materials that are primarily geologic in origin, such as silt, loam, or clay, and that are indigenous to the natural geologic environment. Soils DO NOT include wastes withdrawn from active hazardous waste management units.
- **Solid** - a material that has a vertical flow of 2 inches (50 mm) or less within a 3-minute period when determined in accordance with the procedures specified for a transport vehicle or freight container, in which hazardous materials are loaded with no intermediate form of containment and which has:

- (1) an internal volume greater than 450 liters (118.8 gallons) as a receptacle for a liquid
 - (2) a capacity greater than 400 kilograms (881.8 pounds) as a receptacle for a solid
 - (3) a water capacity greater than 1000 pounds (453.6 kilogram) packaging means a capacity of 400 kilograms (881.8 pounds) or less as a receptacle for a gas defined in 40 CFR 173.300.
- *Spill* - the accidental spilling, leaking, pumping, pouring, emitting, or dumping of hazardous wastes or materials which, when spilled into or on any land or water, become hazardous wastes.
 - *Storage* - the holding of hazardous wastes for a temporary period, at the end of which the hazardous wastes are treated, disposed of, or stored elsewhere.
 - *Sump* - any pit or reservoir that meets the definition of tank and those troughs/trenches connected to it that serve to collect hazardous waste for transport to hazardous waste storage, treatment, or disposal facilities.
 - *Surface Impoundment* - a facility or part of a facility that is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials designed to hold an accumulation of liquid wastes or wastes containing free liquids and which is not an injection well.
 - *Tank* - a stationary device designed to contain an accumulation of hazardous waste and is constructed primarily of nonearthen materials (e.g., wood, concrete, steel, plastic) which provide structural support.
 - *Tank System* - a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system.
 - *Temporary Storage Point* - an area where hazardous waste is temporarily stored in tanks or containers for 90 days or less on an installation.
 - *Thermal Treatment* - the treatment of hazardous waste in a device that uses elevated temperature as the primary means to change the chemical, physical, or biological character of the waste.
 - *Third Third Wastes* - wastes included in the third one-third of the schedule of restricted hazardous wastes listed in 40 CFR 268.10.
 - *Transit Country* - any foreign country, other than a receiving country, through which a hazardous waste is transported.

- **Transporter** - a person engaged in the off-site transportation of hazardous wastes by air, rail, highway, or water.
- **Treatability Study** - a study in which a hazardous waste is subjected to a treatment process to determine:
 - 1) whether the waste is amenable to the treatment process
 - 2) what pretreatment (if any) is required
 - 3) the optimal process conditions needed to achieve the desired treatment
 - 4) the efficiency of a treatment process for a specific waste or wastes, or
 - 5) the characteristics and volumes of residuals from a particular treatment process.
- **Treatment** - a process that reduces the toxicity of a waste or the likelihood of migration of hazardous constituents from the waste.
- **USEPA Acknowledgement of Consent** - the cable sent to the USEPA from the US Embassy in a receiving country that acknowledges the written consent of the receiving country to accept the hazardous waste and describes the terms and conditions of the receiving country's consent to the shipment.
- **USEPA Hazardous Waste Number** - the number assigned by USEPA to each hazardous waste listed in 40 CFR Part 261, Subpart D, and to each characteristic identified in 40 CFR 261, Subpart C.
- **USEPA Identification Number** - the number assigned by USEPA to each generator, transporter, and treatment, storage, or disposal facility.
- **Underground Tank** - a device meeting the definition of "tank" in 40 CFR 260.10 whose entire surface area is totally below the surface and covered by the ground.
- **Unfit-for-Use Tank System** - a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment.
- **Wastewater Treatment Unit** - a device that is part of a wastewater treatment facility subject to regulation under section 402 or 307 of the Clean Water Act and receives and treats or stores an influent wastewater that is a hazardous waste (as defined in 40 CFR 261.3) or that generates and accumulates a wastewater treatment sludge that is a hazardous waste, or treats or stores a wastewater treatment sludge and meets the definition of tank or tank system.

- *Zone of Engineering Control* - an area under the control of the owner/operator that upon detection of a hazardous waste release, can be readily cleaned up before the release of hazardous waste or hazardous constituents to ground water or surface water.

RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE C

Records to Review:

Generator (including TSDFs if they are also generators):

- Notification (USEPA ID#)
- Hazardous waste manifests
- Manifest exception reports
- Biennial reports (large quantity generators only)
- Delistings
- Speculative accumulation records
- Land disposal restriction certifications
- Employee training documentation
- Hazardous waste tank integrity assessments
- Contingency plan (large quantity generators only)
- Notifications of hazardous waste oil fuel marketing or blending activity
- Accumulation point inspection records
- Hazardous Waste Management Plan
- Used Solvent Elimination Program Contract (DEH or DOL)

In addition to the above, TSDFs would require:

- Location map of TSDFs
- Unmanifested waste reports
- Facility audit reports (Inspection log)
- Waste analysis plan(s)
- Operating record
- Ground water monitoring records and annual reports (where required)
- Facility Biennial reports
- Closure/Post Closure Notices (where applicable)
- Other documents as required by the Permit
- Part A/B permit including:
 - spill prevention countermeasure and contingency plans (SPCCP)
 - installation spill countermeasure plan (ISCP)
 - inspection plan
 - training plan
 - closure/post-closure plans
- Hazardous waste inventory

Physical Features to Inspect:

- Disposal sites
- Accumulations points
- Incinerators
- Vehicles used for transport
- Storage facilities (including drums)
- Surface impoundments

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Safety and Health Officer
- Fire Department
- Director of Logistics (DOL)
- TSDF Operators (DEH, DOL, DRMS)
- Shop Activity Supervisor
- Defense and Reutilization Marketing Service (DRMS)

Installations that treat any restricted wastes, or any mixture, or any other product derived from the treatment, storage, or disposal of such wastes must certify that such wastes were treated according to the generators demonstration (40 CFR 268.8).</p> <p style="text-align: center;">...</p> | <p>Check records to determine that the installation has copies of the following in its operating record: (2)</p> <ul style="list-style-type: none"> - the generators demonstration (if applicable) - the generators certification - a copy of the treatment facility's certification which reads as follows: "I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operations of the treatment process used to support this certification and that, based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the treatment process has been operated and maintained properly so as to comply with treatment as specified in the generator's demonstration. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment." <p style="text-align: center;">...</p> |
| <p>4-169. If wastes or treatment residues from restricted wastes are to be further managed at another treatment, storage, or disposal facility, the installation sending the waste must comply with the notice and certification requirements for generators (40 CFR 268.8).</p> <p style="text-align: center;">...</p> | <p>Verify that prior to disposal of any restricted wastes without set treatment standards ("soft hammer") in a landfill or surface impoundment, the installation has obtained a copy of a valid certification from the initial generator. (Other forms of land disposal are not similarly restricted and may continue to be used for the disposal of untreated wastes until USEPA sets treatment standards or until May 5, 1990, whichever is sooner). (2)</p> <p>Conduct a spot check of the units containing "First Third-soft hammer" wastes for the following MTR requirements: (1)(4)</p> <ul style="list-style-type: none"> - double liners - leachate collection system - ground water monitoring system. <p>Verify that before land disposal of any restricted wastes with set treatment standards, the installation has on site: (1)</p> <ul style="list-style-type: none"> - a copy of certification (either from the generator or treatment facility) indicating that the wastes have been treated and meet the applicable treatment standard - a copy of the generator's certification, notice, and demonstration. <p style="text-align: center;">...</p> |
| <p>4-170. Installations are prohibited from storing any restricted wastes unless such wastes are subject to a valid certification (40 CFR 268.44(k)).</p> <p style="text-align: center;">...</p> | <p>Check records to verify that a copy of a valid certification from the initial generator is on site. (2)</p> <p style="text-align: center;">...</p> |

Appendix 4-1

Potentially Incompatible Hazardous Wastes

Below are examples of potentially incompatible wastes, waste components, and materials, along with the harmful consequences that result from mixing materials in one group with materials in another group. The list is intended as a guide to indicate the need for special precautions when managing these potentially incompatible waste materials or components. This list is not intended to be exhaustive. Operators must, as the regulations require, adequately analyze their wastes so they can avoid creating uncontrolled substances or reactions of the type listed below, whether listed below or not.

In the lists below, the mixing of a *Group A* material with a *Group B* material may have the potential consequences as noted.

| Group 1-A | Group 1-B |
|---|--|
| Acetylene sludge Alkaline caustic liquids Alkaline cleaner Alkaline corrosive liquids Alkaline corrosive battery acid Caustic wastewater Lime sludge and other corrosive alkalis Lime wastewater Lime and water Spent caustic | Acid sludge Acid and water Battery acid Chemical cleaners Electrolyte, acid Etching acid liquid or solvent Pickling liquor and other corrosive acids Spent acid Spent mixed acid Spent sulfuric acid |

Potential Consequences: Heat generation, violent reaction.

| Group 2-A | Group 2-B |
|---|-------------------------------|
| Aluminum Beryllium Calcium Lithium Magnesium Potassium Sodium Zinc powder Other reactive metals and metal hydrides | Any waste in Group 1-A or 1-B |

Potential Consequences: Fire or explosion; generation of flammable hydrogen gas.

Appendix 4-1 (continued)

| Group 3-A | Group 3-B |
|-------------------|---|
| Alcohols Water | Any concentrated waste in Groups 1-A or 1-B Calcium Lithium Metal hydrides Potassium SO_2Cl_2 , SOCl_2 , PCl_3 , CH_3SiCl_3 Other water-reactive waste |

Potential Consequences: Fire, explosion, or heat generation; generation of flammable or toxic gases.

| Group 4-A | Group 4-b |
|--|---|
| Alcohols Aldehydes Halogenated hydrocarbons Nitrated hydrocarbons Unsaturated hydrocarbons Other reactive organic compounds and solvents | Concentrated Group 1-A or Group 1-B wastes Group 2-A wastes |

Potential Consequences: Fire explosion, or violent reaction.

| Group 5-A | Group 5-B |
|-------------------------------------|------------------|
| Spent cyanide and sulfide solutions | Group 1-B wastes |

Potential Consequences: Generation of toxic hydrogen cyanide, or hydrogen sulfide gas.

Appendix 4-1 (continued)

| Group 6-A | Group 6-B |
|--|---|
| Chlorates Chlorine Chlorites Chromic acid Hypochlorites Nitrates Nitric acid, fuming Perchlorates Permanganates Peroxides Other strong oxidizers | Acetic acid and other organic acids Concentrated mineral acids Group 2-A wastes Group 4-A wastes Other flammable and combustible wastes |

Potential Consequences: Fire, explosion, or violent reaction.

40 CFR 261, Identification and Listing of Hazardous Waste

TABLE I

Hazardous Waste from Nonspecific Sources

| Industry and USEPA Hazardous Waste Number | Hazardous Waste | Hazard Code * |
|---|---|---------------|
| Generic | | |
| F001 | the spent halogenated solvents used in degreasing. Trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and the chlorinated fluorocarbons; all spent solvent mixtures or blends used in degreasing containing before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents or those listed in F002, F004, F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. | (t) |
| F002 | the following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,1,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures or blends containing, before use, a total of 10 percent or more by volume, of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. | (t) |

* HAZARD CODES (Column 3)

Appendix 4-3

F-solvent Waste Constituents

| CONSTITUENTS OF USEPA HAZARDOUS WASTES F001-F005 | EXTRACT CONCENTRATIONS ^a (in milligrams per liter) | |
|---|--|--------------------|
| | WASTEWATER ^b | OTHER ^c |
| SPENT SOLVENT WASTE | | |
| Acetone | 0.05 | 0.59 |
| n-Butyl alcohol | 5.00 | 5.00 |
| Carbon disulfide | 1.05 | 4.81 |
| Carbon tetrachloride | 0.05 | 0.96 |
| Chlorobenzene | 0.15 | 0.05 |
| Cresols (cresylic acid) | 2.82 | 0.75 |
| Cyclohexanone | 0.125 | 0.75 |
| 1,2-Dichlorobenzene | 0.65 | 0.125 |
| Ethyl acetate | 0.05 | 0.75 |
| Ethylbenzene | 0.05 | 0.053 |
| Ethyl ether | 0.05 | 0.75 |
| Isobutanol | 5.00 | 5.00 |
| Methanol | 0.25 | 0.75 |
| Methylene chloride | 0.20 | 0.96 |
| Methyl ethyl ketone | 0.05 | 0.75 |
| Methyl isobutyl ketone | 0.05 | 0.33 |
| Nitrobenzene | 0.66 | 0.125 |
| Pyridine | 1.12 | 0.33 |
| Tetrachloroethylene | 0.079 | 0.05 |
| Toluene | 1.12 | 0.33 |
| 1,1,1-Trichloroethane | 1.05 | 0.41 |
| 1,1,2 Trichloro-1,2,2-trifluoroethane | 1.05 | 0.96 |
| Trichloroethylene | 0.062 | 0.091 |
| Trichlorofluoromethane | 0.05 | 0.96 |
| Xylene | 0.05 | 0.15 |

^a An extract of the waste is obtained by employing the Toxicity Characteristic Leaching Procedure (TCLP). The TCLP is an analytical method used to determine whether the concentrations of hazardous constituents in the waste extract or an extract of the treatment residual meet the treatment standards.

^b For determining the applicable treatment standard, F-solvent wastewaters are defined as solvent-water mixtures containing less than or equal to 1 percent total organic carbon (TOC).

^c Wastewaters that contain more than 1 percent TOC solvent-containing solids, solvent-containing sludges, and solvent-contaminated soils.

Appendix 4-4

California List Rule

On 8 July 1987, the USEPA promulgated the second phase of the Land Disposal Restrictions (LDR) program which restricts the land disposal of the California List wastes. The California List consists of liquid hazardous wastes containing certain metals, free cyanides, polychlorinated biphenyls (PCBs), corrosives with a pH less than or equal to 2.0, and liquid and nonliquid hazardous wastes containing halogenated organic compounds (HOCs) as described below:

- A. Liquid hazardous wastes, including free liquids associated with any solid or sludge, containing free cyanides at concentrations greater than or equal to 1000 mg/l.
- B. Liquid hazardous wastes, including free liquids associated with any solid or sludge, containing any of the following metals (or elements) or compounds of these metals (or elements) at concentrations greater than or equal to those specified below:

| | |
|---------------------|----------|
| Arsenic (as As) | 500 mg/l |
| Cadmium (as Cd) | 100 mg/l |
| Chromium (as Cr VI) | 500 mg/l |
| Lead (as Pb) | 500 mg/l |
| Mercury (as Hg) | 20 mg/l |
| Nickel (as Ni) | 134 mg/l |
| Selenium (as Se) | 100 mg/l |
| Thallium (as Tl) | 130 mg/l |

- C. Liquid hazardous wastes having a pH less than or equal to 2.0.
- D. Liquid hazardous wastes containing PCBs at concentrations greater than or equal to 50 ppm.
- E. Hazardous wastes containing HOCs in total concentrations greater than or equal to 1,000 mg/l.

Although these liquid wastes can be treated using solidification techniques such that they no longer meet the statutory definitions of California List wastes, it is not USEPA's intent that simple absorption be used instead of permanent treatment. Where physical or chemical changes do not occur, or where hazardous constituents are not otherwise immobilized, "solidification" techniques may be possibly considered "dilution as a substitute for adequate treatment," a prohibited activity in the LDR program.

Appendix 4-4 (Continued)

The rule requires that the Paint Filter Liquids Test be used to determine whether a waste is considered a liquid or nonliquid. This procedure is method 9095 in USEPA Publication No. SW-846, *Test Methods for Evaluating Solid Waste*.

Collectively, these hazardous wastes are referred to as the California List because the State of California developed regulations to restrict the land disposal of hazardous wastes containing these constituents. Congress adopted these prohibitions in the 1984 Amendments to RCRA.

Cyanides and Metals. Liquid hazardous wastes containing cyanide and metals exceeding the levels listed above may not be land-disposed as of 8 July 1987. Any applicable treatment method, except dilution, may be used to treat these wastes to achieve the levels noted above, prior to land disposal.

Halogenated Organic Compounds Under the July 1987 California list rule, the HOCs subject to the LDR are in Appendix III of Part 268. The final rule specifies that hazardous wastes containing HOCs in total concentrations greater than or equal to 1000 mg/l (or 1000 mg/kg), must be incinerated or burned in boilers or industrial furnaces in accordance with existing RCRA regulations. If, however, the HOC waste is also subject to the F-solvent restrictions, the more stringent treatment standard applies.

Corrosives. On 8 July 1987, liquid wastes having a pH of 2.0 or less were prohibited from land disposal. Any applicable, legitimate treatment method may be used to achieve a pH greater than 2.0 prior to land disposal.

Polychlorinated Biphenyls. As of 8 July 1987, liquid hazardous wastes containing PCBs in concentrations exceeding 50 ppm must be incinerated or burned in high efficiency boilers in accordance with the technical standards of 40 CFR 761.70. Additionally, restricted wastes with PCBs may only be stored for up to 1 year.

EFFECTIVE DATES FOR CALIFORNIA WASTES

| WASTES | DATE |
|---|------------|
| Liquid hazardous wastes containing $\geq 1,000$ mg free cyanides | 07/08/87 |
| Liquid hazardous wastes having a pH ≤ 2.0 | 07/08/87 |
| Liquid hazardous wastes containing ≥ 5.0 ppm PCBs | 07/08/87 |
| Liquid hazardous wastes, primarily water, containing $\geq 1,000$ mg HOCs, $\leq 10,000$ mg/l HOCs | 07/08/87 |
| Liquid hazardous wastes $\geq 1,000$ mg/l HOCs | 11/08/88 a |
| Nonliquid (non-RCRA/CERCLA) hazardous wastes | |
| Nonliquid (non-RCRA/CERCLA) hazardous wastes $\geq 1,000$ mg/kg HOCs | 11/08/88 a |
| California waste contaminated soil and debris resulting from RCRA/CERCLA corrective/remedial actions | 11/08/90 b |

- a Between July 8, 1987 - November 8, 1988, if disposed in landfill or surface impoundment, the unit must meet minimum technology requirements. [268.5 (h) (2)]
- b Between November 8, 1988 - November 8, 1990, if disposed in landfill or surface impoundment, the unit must meet minimum technology requirements. [268.5 (h) (2)]

Section 5

**RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE D
(RCRA-D)**

SECTION 5

RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE D (RCRA-D)

A. Applicability of this Protocol

This protocol addresses the collection, storage, and disposal of solid waste on Army installations.

Solid waste is considered to be nonhazardous trash, rubbish, garbage, bulky wastes, liquids, or sludges generated by any Army installation operations and activities. It also includes any medical/pathological wastes generated by the installation hospital. The handling and disposal of asbestos waste materials are addressed in Section 13, *Asbestos Abatement*.

Recycling and resource recovery activities are also included in this protocol, since this form of solid waste management is required by DoD and U.S. Army directives.

Solid waste management is regulated on the Federal level, but the primary focus is state and local regulatory authorities.

Consequently, many of the evaluation inspection items on the worksheets are presented in a generic manner to address those requirements typically found in state solid waste regulations. A previsit analysis of specific state solid waste regulations is required to conduct a thorough review of this area.

B. Federal Legislation

- Subtitle D of the Resource Conservation and Recovery Act (RCRA) has established Federal standards for the management of nonhazardous solid wastes. The primary goals of the Subtitle are to encourage:
 - (1) environmentally sound solid waste management practices,
 - (2) recycling of waste materials, and
 - (3) resource conservation.
- Subtitle D of RCRA establishes the framework for Federal, state, and local government cooperation in controlling the management of nonhazardous solid waste. The Federal role in this arrangement is to establish the overall regulatory direction, to provide minimum standards for protecting human health and the environment, and to provide technical assistance to states for planning and developing environmentally sound waste management practices. The actual

planning and direct implementation of solid waste programs under Subtitle D, however, remain state and local functions.

- The Solid Waste Disposal Act of 1965, as amended by RCRA, requires that Federal facilities comply with all Federal, state, interstate, and local requirements concerning the disposal and management of solid wastes. These requirements include permitting, licensing, and reporting. 40 Code of Federal Regulation (CFR) 240, *Guidelines For the Thermal Processing of Solid Waste*, regulates incinerators processing a minimum of 50 tons/day. 40 CFR 241, *Introduction of Solid Waste*, covers the land disposal of solid wastes. 40 CFR 243, *Guidelines For the Storage and Collection of Residential, Commercial, and Institutional Solid Waste*, addresses the requirements for the storage and collection of solid waste materials. 40 CFR 244, *Solid Waste Management Guidelines for Beverage Containers*, develops minimum requirements for the management of beverage containers. 40 CFR 245, *Promulgation Resource Recovery Facilities Guidelines*, establishes requirements for resource recovery of residential, commercial, or institutional solid waste. 40 CFR 246, *Source Separations for Materials Recovery Guidelines*, deals with source separation for material recovery.
- The 1984 Hazardous and Solid Waste Amendments to RCRA are the most recent addition to the bank of Federal laws regulating the disposal of solid wastes. These Amendments added a number of previously unlisted materials to the growing list of waste defined as hazardous. Some of these included chlorinated dioxins and dibenzofurans, solvents, refining wastes, chlorinated aromatics, lithium batteries, paint production wastes, and a large number of similar compounds and waste materials.

C. State / Local Requirements

The transport and disposal of solid waste is heavily regulated at the state or local level of government. Most states and municipalities have developed their own code of regulations governing the permitting, licensing, and operations of landfills, incinerators, and source separation/recycling programs. Many of these state and local requirements are more stringent than Federal rules, and the evaluator should carefully review state and local rules and regulations before conducting an environmental review of the Army installations.

D. DoD Regulations

- DoD Directive 4100.15, *Commercial and Industrial Activities*, sets the overall policy that military installations shall not compete with a locally available com-

mercial recycling industry which offers a total solid waste resource recovery system and that regional resource recovery programs shall be used whenever practical.

- DoD Directive 4165.60, *Solid Waste Collection, Disposal, Material Recovery, and Recycling*, provides guidance and direction to all DoD facilities relative to solid waste collection, disposal, material recovery, and recycling in agreement with the Solid Waste Disposal Act.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 6, *Solid Waste and Hazardous Waste Management Program*, defines Army policy and procedures for managing solid waste, including resource recovery, recycling, waste reduction, and training programs. It mandates compliance with local, state, and Federal solid waste requirements, assures waste management practices that protect the environment and public health, reduce the need for corrective action, minimize the volume of generated waste, and design and procure material so the end item can be economically restored, reconstituted, or converted to other uses.
- Army Regulation (AR) 420-47, *Solid and Hazardous Waste Management*, remains in force with the exception of chapters 5 and 6, appendices a, b, and c, and the glossary, which have been superseded by AR 200-1. The remaining chapters cover responsibilities regarding solid and hazardous waste, collection and storage of both solid and hazardous waste, thermal processing and land disposal of solid (nonhazardous) waste, and monitoring records.
- Army Regulation (AR) 40-5, *Preventive Medicine*, establishes practical measures for the preservation and promotion of health and the prevention of disease and injury.

The Department of the Army (DA) objective is to manage Army solid waste to ensure compliance with appropriate Federal, state, and DA regulations in a manner that permits maximum opportunity for resource recovery without jeopardizing natural resources or health and the environment.

F. Key Compliance Requirements

- Permits and Licenses for On-Site Landfills - Army installations must obtain applicable state or local permits and licenses for the site location and operation of on-site landfills. The Solid Waste Disposal Act of 1965 is the governing Federal legislation.

- **Hazardous Waste** - Substances regulated as hazardous by Federal, state, or local regulations may not be disposed of as solid waste. RCRA, the Hazardous and Solid Waste Amendments of 1984, and specific state and local regulations will apply.
- **Waste Source Separation and Recycling** - Army installations are required to comply with Federal, state, and local regulations and requirements governing the separation of wastes into residual value and the recycling of those materials.
- **Use of Properly Permitted Off-Site Landfills** - Army installations have the responsibility for the proper disposal of solid waste generated by Army operations. This responsibility includes assurance that off-site landfills that receive Army solid wastes are licensed and are operated in compliance with the conditions of those permits.
- **Garbage On or In Vessels and Aircraft Arriving From Outside the United States** - Army installations located in the United States and territories and possessions are required to comply with certain United States Department of Agriculture (USDA) inspection and disposal requirements if they receive garbage from vessels and aircraft arriving from outside the United States. These regulations are designed to prevent the spread of plant pests and animal diseases.

G. Responsibility for Compliance

- The Directorate of Engineering and Housing (DEH) is responsible for site location, licensing, construction, and operation of on-site landfills, and for the storage and transportation of solid wastes to either on-site or off-site disposal activities operated by the installation. (Note: Contracted services are not under Facilities Engineering.)

H. Key Compliance Definitions

These definitions were obtained from Federal, DoD, and U.S. Army regulations cited previously in this protocol.

- **Good Management Practice (GMP)** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- **Leachate** - water that percolates through a landfill and which contains soluble contaminants, some of which may be hazardous or toxic. Leachate is often characterized by a strong odor and is often a highly concentrated organic waste containing dissolved metals and salts.

- ***Recyclable Materials*** - materials that normally have been or would be discarded, and that may be reused after undergoing some type of physical or chemical processing. Recyclable materials do not include precious metals and similar materials that may be used again for their original purposes without any special processing.
- ***Resource Recovery*** - the process of obtaining materials or energy from solid waste. The most common type of resource recovery facility is an incinerator which coproduces electricity for sale to a commercial utility and steam for use as a heating source or industrial energy source.
- ***Solid Waste*** - garbage, demolition waste, refuse, sludge, and other solid, liquid, semisolid or contained gaseous material that is discarded, has served its intended purpose, or is a mining or manufacturing by-product. For the purposes of this protocol, the definition includes all waste materials that are not defined by regulation to be either hazardous or toxic, and that are normally disposed of by landfilling, incineration, or are recycled or recovered. Demolition wastes are not included in the Federal definition of a solid waste.
- ***Source Separation*** - the separation of materials with marketable residue value at their point of generation by the generator.
- ***Visible Emissions*** - any emissions that are visually detectable without the aid of instruments and that contain particulate asbestos material.

RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE D

GUIDANCE FOR WORKSHEET USERS

| | REFER TO WORKSHEET ITEMS: | CONTACT THESE PERSONS OR GROUPS:(a) |
|--|--------------------------------------|--|
| All Installations | 5-1 through 5-5 | (1)(2) |

RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE D

Records to Review:

- Record of current nonhazardous solid waste management practices
- Documentation of locations (map) and descriptions of all nonhazardous waste treatment, storage, and disposal facilities (TSDFs)
- Records of operational history of all active and inactive TSDFs
- State and Federal inspection reports
- Environmental monitoring procedures or plans and analytical results
- Records of resource recovery practices, including the sale of materials for the purpose of recycling
- Solid waste removal contracts and inspection records
- Regional solid waste management plan
- Unique state and local rules for handling solid waste
- Installation solid waste management plans, Standing Operating Procedures (SOPs)
- Any regulatory agreement, waivers, exemptions, inspection reports, compliance orders, and notices relating to solid waste program
- Groundwater monitoring well data

Physical Features to Inspect:

- Resource recovery facilities
- Incineration and land disposal facilities (active and inactive)
- Areas where nonhazardous waste is disposed
- Construction debris areas
- Waste receptacles
- Solid waste vehicle storage and washing areas
- Groundwater monitoring wells
- Methane gas vents at landfills

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Chief of Operations and Maintenance (O&M)
- Director of Contracting (DOC)
- Public Affairs Office (PAO)

Appendix 5-1

Regulated Medical Waste

| Waste Class | Description |
|---------------------------------------|---|
| Cultures and Stocks | Cultures and stocks of infectious agents and associated biologicals, including: cultures and stocks of infectious agents from research and industrial laboratories wastes from the production of biologicals; discarded live and attenuated vaccines; and culture dishes and devices used to transfer, inoculate, and mix cultures. |
| Pathological Wastes | Human pathological wastes, including tissues organs, body parts, and body fluids that are removed during surgery or autopsy or other medical procedures, and specimens of body fluids and their containers. |
| Human Blood and Blood Products | Liquid waste human blood, products of blood, items saturated and/or dripping with human blood; or items that were saturated and/or dripping with human blood that are not caked with dried human blood; including serum, plasma, and other blood components, and their containers, which were used or intended for use in either patient care, testing, and laboratory analysis, or the development of pharmaceuticals; intravenous bags are also included in the category. |
| Sharps | Sharps that have been in animal or human patient care or treatment or in medical, research, or industrial laboratories, syringes (with or without the attached needs), pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, and culture dishes (regardless of presence of infectious agents). Also included are other types of broken or unbroken glassware that were in contact with infectious agents, such as used slides and cover slips. |
| Animal Waste | Contaminated animal carcasses, body parts, and bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biologicals or testing of pharmaceuticals. |
| Isolation Wastes | Biological waste and discarded materials contaminated with blood, excretion, exudates, secretions from humans who are isolated to protect others from certain highly communicable diseases, or isolated animals known to be infected with highly communicable diseases. |
| Unused Sharps | The following unused, discarded sharps: hypodermic needles, suture needles, syringes, and scalpel blades. |

Section 6

**RESOURCE CONSERVATION AND RECOVERY ACT,
SUBTITLE I (RCRA-I)**

SECTION 6

RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE I (RCRA-I) AND POL MANAGEMENT

A. Applicability of this Protocol

This protocol covers management of aboveground and belowground POL bulk storage tanks, organizational tanks, pipeline delivery systems, truck fill stands, immediate operating storage areas, and fueling/defueling flight line operations. POL materials addressed include jet fuel (JP-4), AVGAS, MOGAS, diesel fuel, and lubricating oils. Waste petroleum based solvents (including PD-680) are addressed in Section 3, Hazardous Waste Management. The portion of this protocol dealing with underground storage tanks also applies to hazardous materials storage.

B. Federal Legislation

- The 1984 amendments to RCRA [P.L. 94-580, 42 USC 6912, and 42 USC 6991] also included provisions, under Subtitle I, for Underground Storage Tanks (USTs). RCRA codified a comprehensive regulatory program for USTs that store petroleum, petroleum byproducts, or substances defined as hazardous under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 101(14).
- 40 CFR 280, *Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks (USTs)*, and 40 CFR 281, *Approval of State Underground Storage Tank Programs*, fulfill the requirements of RCRA Subtitle C sections 9003(a),(c), and (e), and sections 9009(a) and (b). There are several elements in these regulations, beginning with standards for the installation of new UST systems and the certification of the installation. Owners and operators of UST systems are required to certify all repairs done to existing and new systems. Filling practices must be monitored to prevent overfills and spills. All UST systems must have release detection systems either installed with the new tank or phased in over a 5-year period depending on the age of the existing tank. Tanks are subject to monthly release detection monitoring and annual tank tightness testing. Reporting requirements include notice of the installation of a UST, suspected release or spill, temporary removal from service, and permanent removal. Section 9002 of RCRA has barred the installation of unprotected tanks since 7 May 1985.
- 40 CFR 300, *National Oil and Hazardous Substances Pollution Contingency Plan*, contains the regulations that require the establishment and maintenance of

a National Oil and Hazardous Substance Pollution Contingency (OHSPC) Plan. Most Army installations combine the OHSPC and SPCC plans into one single document, usually called the Spill Prevention and Response (SPR) Plan. 40 CFR 302, *Designation, Reportable Quantities, and Notification*, as amended, defines Reportable Spill Quantities (RQs), which are described in the definition section of this protocol. Section 2, *Hazardous Materials Management*, also addresses compliance with this regulation for substances other than oil.

C. State/Local Requirements

Many state and local governments also have active UST programs. These various governments have developed regulations specific to the physical environment and the regulated communities' needs. Review regulations at the state and local level to ensure that any differences, such as reporting or notice requirements, and monitoring requirements are being complied with. In all cases, the most stringent regulation should be followed.

D. DoD Regulations

- DoD Directive 4140.25M, *Procedures for the Management of Petroleum Products*, describes procedures for the management of petroleum products on military installations.
- DoD Directive 5030.41, *Oil and Hazardous Substances Pollution Prevention and Contingency Program*, addresses requirements for compliance with the National Oil and Hazardous Substances Pollution Contingency Plan.
- Defense Environmental Quality Program Policy Memorandum (DEQPPM) 79-3, *Management of Recoverable and Waste Liquid Petroleum Products*, addresses the management of recoverable and waste liquid petroleum products.

E. U.S. Army Regulations

- AR 200-1, *Environmental Protection and Enhancement*, requires compliance with the most stringent Federal, state, local, host nation, and Army requirements for USTs. It further lifts the categorical exclusion granted to heating oil tanks under Subtitle I of RCRA. Chapter 5, paragraph 7, outlines the basic Army UST requirements to follow in the absence of more stringent regulations.
- AR 420-49, *Heating, Energy Selection, and Fuel Storage, Distribution, and Dispensing Systems*.

F. Key Compliance Requirements

- **Petroleum Product Environmental Release Reporting** - Army installations are required to notify USEPA and appropriate state agencies when a release of a reportable quantity of POL material enters a navigable water (40 CFR 302).
- **Spill Response Training** - All Army personnel involved with the management and handling of oil and hazardous substances must take part in periodic spill prevention and response training programs (40 CFR, Parts 112.7, 264.16 and 265.16).
- **New Petroleum Underground Storage Tanks** installed after December 1988, must be certified that the tank and piping were properly installed; the tank must be equipped with devices to prevent spills and overfill; correct filling practices must be followed; the tank and piping must be protected from corrosion; and both the tank and piping must be equipped with leak detection.
- **Existing Petroleum Underground Storage Tanks** installed before December 1988, must have corrosion protection for steel tanks and piping, and devices that prevent spills and overfills installed by December 1998. Leak detection needs to be phased in as per Appendix 6-4.
- **UST Leaks** must be corrected following short and long term requirements.
- **Closure procedures** must be followed when a UST is temporarily or permanently closed.
- **Reporting to regulatory agencies** must be accomplished for installation, closure, and suspected releases.
- **Records** must be maintained to prove leak detection performance, inspection of corrosion protection systems, proper repair or upgrade, and to document proper closure.
- **New Chemical USTs** installed after December 1988, containing hazardous materials (no UST is to be used to store hazardous wastes) must meet the same installation, corrosion protection, spill and overfill prevention, corrective action, and closure requirements, but must also have secondary containment and interstitial monitoring.
- **Existing Chemical USTs** installed before December 1988, must meet the same standards as existing petroleum USTs leak detection and must be installed on an accelerated schedule. In addition, chemical USTs must have secondary containment in place by 1998. (Please refer to Appendix 6-3 for phase in schedule).

- Release Detection for Tanks > 2000 Gallons - 40 CFR 280, Subpart D recognizes three basic types of release detection for UST system tanks larger than 2000 gallons:

- 1) Permanent release detection systems that allow testing or analysis every 30 days will eventually be required for all USTs. These systems include vapor monitoring, interstitial monitoring, ground water monitoring, and automatic tank gauging and are required on new USTs within 10 years of installation and on existing USTs by 22 December 1998 or within 10 years of upgrade (i.e., installation of corrosion, spill, and overfill protection), whichever is later.
- 2) Volumetric leak testing every 5 years coupled with monthly inventory control can be used for the first 10 years of a new UST's life or for 10 years after an existing UST has cathodic, spill, and overfill protection installed.
- 3) Annual volumetric leak testing coupled with monthly inventory control can be used on existing USTs without cathodic, spill, and overfill protection until 22 December 1998.

Existing UST system tanks larger than 2000 gallons must implement the release detection requirements based on when the system was installed. The table below identifies the deadline for providing release detection:

| Deadlines for Release Detection: | |
|------------------------------------|--|
| UST System Installation Date | Leak Detection Required by 22 December of: |
| Before 1965 | 1989 |
| 1965-1969 | 1990 |
| 1970-1974 | 1991 |
| 1975-1979 | 1992 |
| 1980-December 1988 | 1993 |

- Release Detection for Underground Piping Associated with UST Systems - 40 CFR 280, Subpart D, establishes separate release detection requirements for underground piping depending on whether it conveys substances under pressure or suction.
 - 1) Pressurized piping must be equipped with an automatic line leak detector and have an annual line tightness test conducted; or use a permanent release detection system that allows monthly monitoring. Permanent

release detection methods acceptable for piping include: vapor monitoring, interstitial monitoring, and ground water monitoring. Deadline for implementing release detection requirements on pressurized piping is 22 December 1990.

- 2) Suction piping either must have a line tightness test conducted every 3 years or must use a permanent release detection system that allows monthly monitoring. Deadlines for implementing release detection requirements on suction piping are based on when the UST system was installed. The table above identifies the deadline for providing release detection.

For suction piping constructed to certain standards, no release detection monitoring is required. It must meet five criteria:

- a) Below-grade piping must operate at less than atmospheric pressure
- b) Below-grade piping must be sloped to drain back into the tank when suction is released
- c) Only one check valve can be included in each suction line
- d) Check valve shall be located directly below and as close as practical to the suction pump
- e) Criteria in paragraphs b) through d) must be verifiable.

G. Responsibility for Compliance

- Installation Commander (IC) is responsible for assigning the duty of drafting and reviewing the SPR Plan prior to its promulgation, and for the annual review and update of the ISCP (Installation Spill Control Plan). Often, the IC delegates the specific preparation of the plan to the Directorate of Engineering and Housing (DEH) for implementation by the Environmental Coordinator. The IC also is responsible for review and implementation of the plan for recoverable and waste petroleum.
- Spill Response Team (SRT) is tasked to respond to spills when requested by an On-Scene Commander (OSC) and to perform spill containment, recovery, cleanup, disposal, and restoration activities as directed by the OCS. The SRT is a multidisciplinary team often including the following persons: Facilities

Engineer, Environmental Coordinator, Director of Safety and Health, Fire Chief, Military Police, Public Affairs Officer, Safety Officer, and Staff Judge Advocate.

- Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department will be responsible for making periodic fire safety inspections of flammable/combustible storage and handling areas, hazardous waste storage areas, and accumulation points on the installation.
- Safety Officer is responsible for conducting work place safety evaluations and inspections of the handling and storage of hazardous materials and waste. The Safety Officer will provide the appropriate manager with a report of the findings and recommended corrective actions. The Safety Officer is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.
- Fuels Management Officer of the Directorate of Engineering and Housing (DEH) is responsible for the safe and efficient receipt, storage, handling, issuing, and accounting of all petroleum products to include all general operations and inspections.
- Directorate of Engineering and Housing is responsible for the maintenance of all installed petroleum storage and dispensing systems. This responsibility often is discharged by the Liquid Fuels Maintenance (LFM) shop. The DEH also is responsible for the calibration of permanently installed meters.
- Environmental Coordinator (EC) monitors all POL activities that may affect the environment and usually is responsible for the coordination of the review and updates of the ISCP Plan. The EC also often coordinates the reportable spills notification of appropriate Federal and state agencies on behalf of the Installation On-Scene Commander.

H. Key Compliance Definitions

These definitions were obtained from the various Federal, DoD, and U.S. Army regulations cited previously in this section.

- *Aboveground Release* - any release to the surface of the land or to surface water. This includes, but is not limited to, releases from the aboveground portion of an UST system and aboveground releases associated with overfills and transfer operations as the regulated substance moves to or from a UST system.

- ***Ancillary Equipment*** - any devices including, but not limited to, such devices as pipings, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of regulated substances to and from the UST.
- ***Associated Piping*** - a length or system of piping connected to an UST and used to transport petroleum products or hazardous substances to or from the UST.
- ***Belowground Release*** - any release to the subsurface of the land and to ground water. This includes, but is not limited to, releases from the belowground portion of an underground storage tank system and belowground releases associated with overfills and transfer operations as the regulated substance moves to or from an underground storage tank.
- ***Cathodic Protection*** - a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell. For example, a tank system can be cathodically protected through the application of either galvanic anodes or impressed current.
- ***Cathodic Protection Tester*** - a person who can demonstrate understanding of the principles and measurements of all common types of cathodic protection systems as applied to buried or submerged metal piping and tank systems. At a minimum, such persons must have education and experience in soil resistivity, stray current, structure-to-soil potential, and component electrical isolation measurements
- ***CERCLA*** - Comprehensive Environmental Response Compensation and Liability Act of 1980 as amended.
- ***Compatible*** - the ability of two or more substances to maintain their respective physical and chemical properties upon contact with one another for the design life of the tank system under conditions likely to be encountered in the UST.
- ***Connected Piping*** - all underground piping including valves, elbows, joints, flanges, and flexible connectors attached to a tank system through which regulated substances flow. For the purpose of determining how much piping is connected to any individual UST system, the piping that joins two UST systems should be allocated equally between them.
- ***Consumptive Use*** - with respect to heating oil, this means consumed on the premises.
- ***Corrosion Expert*** - a person who, by reason of thorough knowledge of the physical sciences and the principles of engineering and mathematics acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems

and metal tanks. Such a person must be accredited or certified as being qualified by the National Association of Corrosion Engineers or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control of buried or submerged metal piping systems and metal tanks.

- **Dielectric Material** - a material that does not conduct direct electrical current. Dielectric coatings are used to electrically isolate UST systems from the surrounding soils. Dielectric bushings are used to electrically isolate portions of the UST system (e.g., tank from piping).
- **Electrical Equipment** - underground equipment that contains dielectric fluid that is necessary for the operation of equipment such as transformers and buried electric cable.
- **Excavation Zone** - the volume containing the tank system and backfill material bounded by the ground surface, walls, and floor of the pit and trenches into which the UST system is placed at the time of installation.
- **Existing Tank System** - a tank system used to contain an accumulation of regulated substances or for which installation began on or before December 22, 1988. Installation is considered to have commenced if:
 - a) the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system; and if,
 - b) (1) either a continuous on-site physical construction or installation program has begun, or
(2) the owner or operator has entered into any contractual obligations that cannot be canceled or modified without substantial loss for physical construction at the site or installation of the tank system to be completed within a reasonable time.
- **Flow-through Process Tank** - a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operation of the process. Flow-through process tanks do not include tanks used to store material before introduction into the production process or to store finished products or by-products from the production.
- **Free-product** - a regulated substance that is present as a nonaqueous phase liquid (e.g., liquid not dissolved in water.).
- **Gathering Lines** - any pipeline, equipment, facility, or building used in the transportation of oil or gas during oil or gas production.

- **Hazardous Substance UST System** - any underground storage tank system that contains a hazardous substance defined in section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (but not including any substance regulated as a hazardous waste under subtitle C) or any mixture of such substances and petroleum, and which is not a petroleum UST system.
- **Heating Oil** - petroleum that is No. 1, No. 2, No. 4—light, No. 4—heavy, No. 5—heavy, and No. 6 technical grades of fuel oil; other residual fuel oils (including Navy Special Fuel Oil and Bunker C); and other fuels when used as substitutes for one of these fuel oils.
- **Hydraulic Lift Tank** - a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices.
- **Liquid Trap** - sumps, well cellars, and other traps used in association with oil and gas production, gathering, and extracting operations (including gas production plants), for the purpose of collecting oil, water, and other liquids. These liquid traps may temporarily collect liquids for subsequent disposition or reinjection into a production or pipeline stream, or may collect and separate liquids from a gas stream.
- **Maintenance** - the normal operational upkeep to prevent an underground storage tank system from releasing a product.
- **Motor Fuel** - petroleum or a petroleum-based substance that is motor gasoline, aviation gasoline, No.1 or No.2 diesel fuel, or any grade of gasohol, and is typically used in the operation of motor engines.
- **New Tank System** - a tank system that will be used to contain an accumulation of regulated substances and for which installation commenced after December 22, 1988.
- **Noncommercial Purposes** - with respect to motor fuel, is not for resale.
- **Oil** - is defined in 40 CFR 122.2 as oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse.
- **Oil and Hazardous Substance Site** - any location where petroleum products or hazardous substances are used and/ or stored in quantities which, if spilled, would constitute a reportable quantity.

- **Oil Separator** - a wastewater pretreatment device or fuel recovery device installed to remove oils from water before the water is released to the environment.
- **On the Premises Where Stored (Heating Oil)** - UST systems located on the same property where the stored heating oil is used and is not bulk storage for transfer elsewhere on the property.
- **Operator** - any person in control of, or having responsibility for, the daily operation of the UST system.
- **Organizational Issue Tank** - a tank not permanently connected to any facility or equipment and used to issue fuel to vehicles, equipment, or portable containers.
- **Organizational Support Tank** - a tank permanently connected to the using facility or equipment, such as facility/housing heating oil tanks and heating plant tanks.
- **Overfill Release** - a release that occurs when a tank is filled beyond its capacity, resulting in a discharge of the regulated substance to the environment.
- **Owner** - (a) in the case of a UST system in use on November 8, 1984, or brought into use after that date, any person who owns a UST system for storage, use, or dispensing of regulated substance - (b) in the case of any UST system in use before November 8, 1984, but no longer in use on that date, any person who owned the UST immediately before the discontinuation of its use.
- **Person** - an individual, trust, firm, joint stock company, Federal agency, corporation, state, municipality, commission, political subdivision of a state, or any interstate body. "Person" also includes a consortium, a joint venture, a commercial entity, and the United States Government.
- **Petroleum UST System** - an underground storage tank system that contains petroleum or a mixture of petroleum with *de minimis* quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.
- **Pipe or Piping** - a hollow cylinder or tubular conduit that is constructed of non-earthen materials.
- **Pipeline Facilities** - (including gathering lines) are new and existing pipe rights-of-way and any associated equipment, facilities, or buildings.

- **Reclaimed Product** - product of known or determinable quality that can be used for the original grade or a lower grade without reprocessing except for settling, filtration, and/or blending.
- **Recoverable Product** - product that has served its intended purpose or that contains foreign matter that renders it unfit for original or alternate use, but that through processing or re-refining can be reclaimed for other use by the Army or commercial industry.
- **Recyclable Materials** - materials that normally have been or would be discarded, and that may be reused after undergoing some type of physical or chemical processing. Recyclable materials do not include precious metals and similar materials that may be used again for their original purposes without any special processing.
- **Regulated Substance** - (a) Any substance defined in section 101(14) of CERCLA (but not including any substance regulated as a hazardous waste under subtitle C), and (b) Petroleum, including crude oil or any fraction thereof, that is liquid at standard conditions of temperature and pressure (60° F and 14.7 psia).

The term "regulated substance" includes, but is not limited to, petroleum and petroleum-based substances comprised of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.

- **Release** - any spilling, leaking, emitting, discharging, escaping, leaching, or disposing from an UST into ground water, surface water, or subsurface soils.
- **Release Detection** - determining whether a release of a regulated substance has occurred from the UST system into the environment or into the interstitial space between the UST system and its secondary barrier or secondary containment around it.
- **Repair** - to restore a tank or UST system component that has caused a release of product from the UST system.
- **Residential Tank** - a tank located on property used primarily for dwelling purposes.
- **Resource Recovery** - the process of obtaining materials or energy from solid waste. Most common type of resource recovery facility is an incinerator that coproduces electricity for sale to a commercial utility and steam for use as a heating source or industrial energy source.

- **SARA - Superfund Amendments and Reauthorization Act.**
- **Septic Tank** - a water-tight covered receptacle designed to receive or process, through liquid separation or biological digestion, the sewage discharged from a building sewer. The effluent from such receptacle is distributed through the soil and settled solids and scum from the tank are pumped out periodically and hauled to a treatment facility.
- **Storm Water or Wastewater Collection System** - piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water run-off resulting from precipitation, or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur. The collection of storm water and wastewater does not include treatment except where incidental to conveyance.
- **Surface Impoundment** - a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although may be lined with man-made materials) that is not an injection well.
- **Tank** - a stationary device designed to contain an accumulation of regulated substances and constructed of nonearthen materials (e.g., concrete, steel, plastic) that provide structural support.
- **Underground Area** - an underground room such as a basement, cellar, shaft, or vault, providing enough space for physical inspection of the exterior of the tank situated on or above the surface of the floor.
- **Underground Release** - any belowground release.
- **Underground Storage Tank (UST)** - any one or a combination of tanks (including underground pipes connected thereto) that is used to contain an accumulation of regulated substances, and the volume of which (including the volume of underground pipes connected thereto) is 10 percent or more beneath the surface of the ground. This term does not include any:
 - (a) Farm or residential tank of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes
 - (b) Tank used for storing heating oil for consumptive use on the premises where stored
 - (c) Septic tanks
 - (d) Pipeline facility (including gathering lines) regulated by other acts
 - (e) Surface impoundment, pit, pond, or lagoon
 - (f) Storm water or wastewater collection system
 - (g) Flow-through process tank

- (h) Liquid trap or associated gathering lines directly related to oil or gas production and gathering operations
- (i) Storage tank situated in an underground area if the storage tank is situated upon or above the surface of the floor.

(NOTE: the definition of UST does not include any pipes connected to any tank described in paragraphs (a) through (i) of this definition.)

- *Upgrade* - the addition or retrofit of some systems such as cathodic protection, lining, or spill and overfill controls to improve the ability of an underground storage tank system to prevent the release of product.
- *UST System or Tank System* - underground storage tank, connected underground piping, underground ancillary equipment, and containment system, if any.
- *Wastewater Treatment Tank* - a tank that is designed to receive and treat influent wastewater through physical, chemical, or biological methods.
- *Waste Petroleum Product* - a product that is no longer suitable for any use because of excessive degradation or contamination by hazardous or toxic wastes.

(a) CONTACT/LOCATION CODE:

- (1) Directorate of Engineering and Housing (DEH)
- (2) Environmental Coordinator (EC)
- (5) Fire Department
- (6) Director of Logistics (DOL)
- (9) Chief of Operations and Maintenance (O&M)

RESOURCE CONSERVATION AND RECOVERY ACT, SUBTITLE I AND POL MANAGEMENT

Records to Review:

- Results of all UST testing, sampling, monitoring, inspection, maintenance, and repair work (for 1 year)
- Registration records for all in-service, temporarily out-of-service, and permanently closed tanks
- Records for UST disposal, closure, and removal from activity and results of excavation area assessment (for 3 years)
- UST inventory - map
- UST replacement program
- Groundwater well monitoring data

Physical Features to Inspect:

- Airfield Refueling Operations
- Refueling facilities, including:
 - Aboveground and belowground storage tanks and dikes
 - Venting
 - Fill pipe
 - Gauges
 - Stations
- Washrack areas
- Vehicle Maintenance areas
- Oil Separators
- Oil and Hazardous Substance Site
- Rapid Refueling Points
- Fuel Bladders

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Fire Department
- Director of Logistics (DOL)
- Chief of Operations and Maintenance (O&M)

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:

**RELEASE
DETECTION/RELEASES**

6-9. All UST systems and piping must have a release detection system in place (40 CFR 280.43).

Review release detection requirements for appropriate UST. (Petroleum or Hazardous Materials) (See Appendix 6-1 *Release Detection Requirements*). (1)(6)

Tanks must be monitored every 30 days except for: (1)(6)

- UST systems that meet performance standards and monthly inventory requirements may use tank tightness testing at least every 5 years after tank is upgraded or installed
- UST systems that do not meet performance standards may use monthly inventory controls and annual tank tightness testing until December 22, 1998, at which time the tank must be upgraded or permanently closed
- tanks that hold less than 550 gallons may use weekly tank gauging.

If piping routinely contains a regulated substance, the piping must have release detection: (1)

- pressurized piping
- equipped with automatic line leak detector
- annual tightness testing or weekly monitoring
- suction piping
- line tightness testing every 3 years or monthly monitoring.
- No release detection system is needed for suction piping when:
 - below grade piping operates at less than atmospheric pressure
 - below grade piping is sloped so contents of pipe will roll back to tank when suction is released
 - only one check valve is included in each suction line
- check valve is located directly below and as close as practical to the suction pump.

...

...

6-10. USTs containing petroleum must meet certain release detection requirements (40 CFR 280.43).

(NOTE: Piping must also meet release detection requirements.)

Verify that release detection includes the following: (1)

- tanks less than 550 gallons may use manual tank gauging
- tanks from 551 to 2000 gallons may use manual and inventory control
- tanks more than 2000 gallons must use other method of detection.

...

...

Appendix 6-1

Release Detection Requirements 40 CFR 280.43

Effective as of 12-22-88

Each method of release detection for tanks used to meet the requirements for petroleum UST systems must be conducted in accordance with the following:

1. Inventory control: Product inventory control must be conducted monthly to detect a release of at least 1.0 percent of flow-through plus 130 gallons on a monthly basis in the following manner:

- i) inventory volume measurements for regulated substance inputs, withdrawals, and the amount still remaining in the tank are recorded each operating day;
- ii) the equipment used is capable of measuring the level of product over the full range of the tanks height to the nearest one-eighth of an inch;
- iii) the regulated substance inputs are reconciled with delivery receipts by measurements of the tank inventory volume before and after delivery;
- iv) deliveries made through a drop tube that extends to within one foot of the tank bottom;
- v) product dispensing is metered and recorded within the local standards of product withdrawn; and
- vi) the measurement of any water level in the bottom of the tank is made to the nearest one-eighth of an inch at least once a month.

2. Manual gauging: manual tank gauging must meet the following requirements:

- i) tank liquid level measurements are taken at the beginning and end of a period of at least 36 hours during which no liquid is added to or removed from the tank;
- ii) level measurements are based on an average of two consecutive stick readings at both the beginning and end of the period;
- iii) the equipment used is capable of measuring the level of product over the full range of the tank's height to the nearest one-eighth of an inch;
- iv) a leak is suspected and subject to the requirements of subpart E if the variation between beginning and ending measurements exceeds the weekly or monthly standards of Table A below;
- v) only tanks of 550 gallons or less nominal capacity may use this as a sole method of release detection. Tanks of 551 to 2,000 gallons may also use inventory control. See paragraph 1 in this appendix. Tanks of greater than 2,000 gallons nominal capacity may not use this method to meet release detection requirements.

Appendix 6-1 (continued)

Table A

| Nominal Tank Capacity | Weekly Standard (one test) | Monthly Standard (average of four) |
|----------------------------------|---------------------------------------|---|
| 550 gallons or less | 10 gallons | 5 gallons |
| 551-1,000 gallons | 13 gallons | 7 gallons |
| 1,0001-2,000 gallons | 26 gallons | 13 gallons |

3. Tank tightness testing: Tank tightness testing must be capable of detecting a 0.1 gallon per hour leak rate from any portion of the tank that routinely contains product while accounting for the effects of thermal expansion or contraction of the product, vapor pockets, tank deformation, evaporation or condensation, and the location of the water table.

4. Tank automatic gauging: Equipment for automatic tank gauging that tests for the loss of product and conducts inventory control; must meet the following requirements:

- i) the automatic product level monitor test can detect a 0.2 gallon per hour leak rate from any portion of the tank that routinely contains product; and
- ii) inventory control is conducted according to requirements (see paragraph 1 above).

5. Vapor monitoring: Testing or monitoring for vapors within the soil gas of the excavation zone must meet the following requirements:

- i) the materials used as backfill are sufficiently porous (eg. gravel, sand, crushed rock) to easily allow diffusion of vapors from releases into the excavation area;
- ii) the stored regulated substance, or a tracer compound placed in the tank system, is sufficiently volatile (eg. gasoline) to result in a vapor level that is detectable by the monitoring devices located in the excavation zone in the event of a release from the tank;
- iii) the measurement of vapors by the monitoring device is not rendered inoperative by the ground water, rainfall, or soil moisture or other unknown interferences so that a release could go undetected for more than 30 days;
- iv) the level of background contamination in the excavation zone will not interfere with the method used to detect releases from the tank;
- v) the vapor monitors are designed and operated to detect any significant increase in concentration above background of the regulated substance stored in the tank system, a component or components of that substance, or a tracer compound placed in the tank system;
- vi) in the UST excavation zone, the site is assessed to ensure compliance with the requirements of paragraph 5 subparagraph i through iv above and to establish the number and positioning of monitor wells that will detect any releases within the excavation zone from any portion of the tank that routinely contains product; and
- vii) monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

6. Ground-water monitoring: Testing or monitoring for liquids in the ground water must meet the following requirements:

- i) the regulated substance stored is immiscible in water and has a specific gravity of less than one;

Appendix 6-1 (continued)

- ii) ground water is never more than 20 feet from the ground surface and the hydraulic conductivity of the soil(s) between the UST system and the monitoring wells or devices is not less than 0.01 cm/sec (eg. the soil should consist of gravels, coarse to medium sands, coarse silts or other permeable materials;
- iii) the slotted portion of the monitoring well casing must be designed to prevent migration of natural soils or filter pack into the well and to allow entry of regulated substance on the water table into the well under both high and low ground water conditions;
- iv) monitoring wells should be sealed from the ground surface to the top of the filter pack;
- v) monitoring wells or devices intercept the excavation zone or are as close to it as is technically feasible;
- vi) the continuous monitoring devices or manual methods used can detect the presence of at least one-eighth of an inch of free product on top of the ground water in the monitoring wells;
- vii) within and immediately below the UST system excavation zone, the site is assessed to ensure compliance with the requirements of paragraphs 6 i-v above and to establish the number and positioning of monitoring wells or devices that will detect releases from any portion of the tank that routinely contains product; and
- viii) monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

7. Interstitial monitoring: Interstitial monitoring between the UST system and a secondary barrier immediately around or beneath it may be used, but only if the system is designed, constructed and installed to detect a leak from any portion of the tank that routinely contains product and also meets one of the following requirements:

- i) for double-walled systems, the sampling or testing method can detect a release through the inner wall in any portion of the tank that routinely contains product;
- ii) for UST systems with a secondary barrier within the excavation zone, the sampling or testing method used can detect a release between the UST system and the secondary barrier;
 - a) the secondary barrier around or beneath the UST system consists of artificially constructed material that is sufficiently thick and impermeable (at least 10 to the minus six cm/sec for the regulated substance stored) to direct a release to the monitoring point and permit its detection;
 - b) the barrier is compatible with the regulated substance stored so that a release from the UST system will not cause a deterioration of the barrier allowing a release to pass through undetected;
 - c) for cathodically protected tanks, the secondary barrier must be installed so that it does not interfere with the proper operation of the cathodic protection system;
 - d) the ground water, soil moisture, or rainfall will not render the testing or sampling method used inoperative so that a release could go undetected for more than 30 days;
 - e) the site is assessed to ensure that the secondary barrier is always above the ground water and not in a 25-year flood plain, unless the barrier and monitoring designs are for use under such conditions; or
 - f) monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

Appendix 6-1 (continued)

- iii) for tanks with an internally fitted liner, an automated device can detect a release between the inner wall of the tank and the liner. The liner is compatible with the substance stored.

8. Other methods: Any other type of release detection method, or combination of methods, can be used if:

- i) it can detect a 0.2 gallon per hour leak rate or a release of 150 gallons within a month with a probability of detection of 0.95 and a probability of false alarm of 0.05; or
- ii) the implementing agency may approve another method, if it can be demonstrated that this method can detect releases as effectively as the methods listed in this appendix.

Each method of release detection for piping, used to meet the requirements must be conducted in accordance with the following:

a. Automatic line detectors: Methods which alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping, or triggering an audible or visual alarm may be used only if they detect leaks of 3 gallons per hour at 10 pounds per square inch line pressure within one hour. An annual test of the operation of the leak detector must be conducted in accordance with the manufacturer's requirements.

b. Line tightness testing: A periodic test of piping may be conducted only if it can detect a 0.1 gallon per hour leak one and one-half times the operating pressure.

c. Applicable tank methods: Vapor monitoring, ground water monitoring and interstitial monitoring may be used if they are designed to detect a release from any portion of the underground piping that routinely contains regulated substances.

Appendix 6-2

**Decision Tree for Compliance with EPA Regulations
Governing Underground Storage Tanks**

40 CFR 280, September 23, 1988

Flow Diagram 1

INITIAL INVENTORY OF ALL UNDERGROUND
STORAGE TANKS AND PIPELINE SYSTEMS
(USTs) ON THE BASE
40 CFR 280.3c Nov 1985
State Notification Requirements Vary

EXCLUDED/UNREGULATED
TANKS AND PIPELINES 40
CFR 280.10 and state regulations
Excludes: heating oil tanks, waste-
water tanks, hydraulic/electrical
system tanks, tanks less than 110 gal,
emergency spill containment tanks.
[AR 200-1 does not exclude
heating oil tanks.]
* Aircraft Hydrant systems and
field constructed USTs are
deferred from this regulation.

PROPERLY ABANDONED/
CLOSED UNUSED AND
UNNEEDED USTs
40 CFR 280.70 and state regulations
Priority for closure based on tank
condition and risk to groundwater.

DETERMINE IF CONTENTS ARE HAZARDOUS
WASTES OR OTHER REGULATED SUBSTANCES
AS DEFINED IN 40 CFR 280.12, 302, and 261

HAZARDOUS WASTES USTs
STORING SPENT SOLVENTS
OIL/SOLVENT MIXTURES,
ETC. SHOULD BE RELOCATED
ABOVE-GROUND WHENEVER
POSSIBLE. OLD USTs SHOULD
BE CLOSED IAW 40 CFR 264.

USTs STORING HIGH RISK
STOCK CHEMICALS SUCH AS
CHLORINATED SOLVENTS
SHOULD BE RELOCATED
ABOVE-GROUND WHENEVER
POSSIBLE. OLD USTs SHOULD
BE CLOSED IAW 40 CFR 280.71.

USTs STORING REGULATED SUBSTANCES
SUCH AS FUELS AND HAZARDOUS
CHEMICALS ARE SUBJECT TO 40 CFR 280
REQUIREMENTS FOR LEAK TESTING AND
UPGRADE TO NEW TANK STANDARDS
(next page)

Flow Diagram 2

PRIORITIZED TANK AND PIPELINE TESTING PROGRAM

In order to determine USTs requiring the most immediate attention, each installation should prioritize their USTs for leak testing. Key factors should include: tank age, potential for corrosion, maintenance and past leak testing records, risk to drinking water, state requirements, and AR 200-1 requirements.

INITIAL USTs TESTING PROGRAM

This testing is intended to locate serious leaks and should be carried out with in-house resources. At a minimum it should include:

- temperature corrected 24-hour static tank test
- In high groundwater areas a monitoring well should be installed at each tank site and shallow groundwater sampled for floating fuel.
- Two-hour pressure test for transfer pipelines

The results of this initial testing should be used to prioritize a second round of more accurate leak detection.

CONFIRMATION TESTING

Based on initial testing results, a priority should be established for more accurate testing. This testing may require contractor assistance. Several testing methods are available:

- Precise inventory controls 40:280.43(a)
- Volumetric or tightness testing 40:280.43(c)
- Tracer or other State approved external monitoring methods for tanks too large for volumetric methods
- Hydrostatic testing of transfer pipelines
- Partial excavation for visual inspection.

NO LEAK FOUND
Go to Diagram 3

CONFIRMED LEAK
Go to Diagram 4

Flow Diagram 3

REQUIRED UPGRADE OR REPLACEMENT OF USTs

In response to the 1984 RCRA Amendments, the EPA has proposed minimum standards for both new and existing USTs. These standards are codified in 40 CFR 280 and will require:

- Cathodic protection for all metal tanks and pipelines
- Overfill prevention devices
- An approved and accurate leak monitoring method. (APPENDIX 6-3 provides a summary of leak detection options available for tanks and pipelines.)
- Secondary containment for hazardous chemical USTs.

Order of Replacement

1. Leaking USTs with high risk to drinking water or risk of explosion. Repair or upgrade too expensive.
2. Nonleaking USTs without cathodic protection which show signs of corrosion.
3. Nonleaking USTs without cathodic protection in soil with low corrosion potential.

Order of Upgrade/Repair

1. Leaking USTs with cathodic protection. Repair and upgrade is economical.
2. Nonleaking USTs without cathodic protection in soil with low corrosion potential.
3. Nonleaking USTs with cathodic protection.

EPA requirements for upgrade/repair are found in 40 CFR 280.21 and 280.33. Alternatives include: interior tank liners, new cathodic protection, spill and overfill devices, leak detection methods.

CONTINUED MAINTENANCE AND MONITORING

Operators of new or upgraded USTs will be required to:

- Prevent overfills and clean up spillage
- Operate and maintain cathodic protection
- Maintain leak detection equipment
- Report suspected leaks (next pg)
- Keep records of USTs maintenance

(See 40 CFR 280.30-53)

PROPER TANK CLOSURE

Any USTs taken out of service may follow 40 CFR 280.71 procedures.

Flow Diagram 4

RELEASE REPORTING REQUIREMENTS

All confirmed leaks, suspected leaks based on monitoring, or spills or overfills of fuels exceeding 25 gallons or causing a sheen on surface water must be reported to State or EPA within 24 hours. All spills must be contained or cleaned up.

RELEASE INVESTIGATION AND CONFIRMATION

Immediate investigation using the following methods (or other specified by the state or EPA):

- Inventory check, followed by:
- Tank or pipeline isolation and monitoring systems recheck
- If leak still suspected a tightness or hydrostatic test must be used to locate leak
- If system fails tightness test, soil coring or groundwater sampling should be conducted
- Evaluation of immediate risk to drinking water, explosive vapors, etc. The IRP HARM or an updated risk assessment method should be used.
- Reporting of results to implementing agency.

40 CFR 280.60

CORRECTIVE ACTIONS

A nationwide survey of USTs has shown a 35% leak rate. While Army maintenance programs are much better than average, over a thousand Army tanks and pipelines are probably leaking. A prioritized remediation plan is needed for each installation and MACOM.

A separate set of corrective actions are required for petroleum products vs other hazardous chemicals. These procedures are listed in 40 CFR 280.60 - 280.67 but will vary based on state requirements and risk assessments.

Small leaks can be cleaned up without removing the tank or pipeline. In many cases, loose joints and connections cause leaks but the general condition of the tank is good. In such cases, the tank or pipeline can be repaired IAW 40 CFR 280.33 and the USTs upgraded to new tank standards.

Appendix 6-3

Options for Release Detection

The most immediate and demanding requirements of 40 CFR 280 are the release detection methods which must be implemented or installed in all UST systems. (See APPENDIX 6-4 for phase-in schedule). A synopsis of 40 CFR 280.20 - 280.45 follows. The type of release detection method used will vary with the type and age of the tank or pipeline. Remember that aircraft hydrant refueling systems and "field constructed" bulk tanks have been deferred and do not have to comply with 40 CFR 280 at this time. In addition to USTs used to store fuel, emergency generators are deferred from meeting the requirements for release detection. Emergency generator fuel tanks must comply with all other parts of this requirement.

Release Detection for Tanks

Option 1 - Combination of Precise Inventory Control and Tightness Testing

If tanks meet 40 CFR 280.20 new tank standards, tightness is required every five years. If tanks do not meet new tank standards, tightness test is required every year until 1998 when the tank must either meet new tank standards or be closed.

Option 2 - Combination of Precise Inventory Control and an Automated Gauging Device

The automatic gauging device must be able to detect a leak of 0.2 gall/hr.

Option 3 - Vapor Monitoring in Soils Surrounding Tank

- Only in sandy or gravelly soils
- Monthly gas sampling
- Must detect vapor levels above background levels
- Groundwater must not interfere
- Sufficient number of vapor monitoring wells

Option 4 - Groundwater Monitoring Near Tanks

- Stored liquid must be immiscible in water and have specific gravity <1
- Groundwater must be within 20 feet of ground surface
- Soils must have hydraulic conductivity of 10^{-2} cm/sec or greater
- Proper monitoring well design and proper number of wells
- Use an automatic or manual method capable of detecting a 1/8 inch layer of floating fuel

Option 5 - Interstitial Monitoring

This method only applies to tanks surrounded by a secondary containment barrier. Monitoring wells must be placed between the tank and the containment barrier.

Option 6 - Any other Method (approved by the implementing agency)
which can detect a 0.2 gal/hr leak or 150 gallon release per month with a 95% probability of false positives.

Pipeline Release Monitoring

The EPA regulation places much more stringent requirements on pipes which convey regulated liquids under pressure. Whenever possible, base engineers should modify pumps and pipelines to reduce the length of pressurized piping. The following release detection requirements apply to piping:

Pressurized Piping

- Must be equipped with sensitive automatic leak detector with alarm or auto shut down capabilities; and
- Have annual tightness test or monthly monitoring system soil vapors, ground water monitoring, interstitial monitoring or other approved method.

Suction Piping

- Tightness test every 3 years and in some cases no release detection is required at all.

Appendix 6 - 4

Schedule for Phase-in of Release Detection

| Year system was installed | Year when release detection is required (by December 22 of the year indicated) | | | | |
|---------------------------------|---|------|------|------|------|
| | 1989 | 1990 | 1991 | 1992 | 1993 |
| Before 1965 or date unknown. | RD | P | | | |
| 1965-69 | | P/RD | | | |
| 1970-74 | | P | RD | | |
| 1975-79 | | P | | RD | |
| 1980-88 | | P | | | RD |

P = must begin release detection for all pressurized piping as defined in 280.41(b)(1).

RD = must begin release detection for tanks and suction piping.

Section 7

**COMPRHENSIVE ENVIRONMENTAL RESPONSE,
COMPENSATION, AND LIABILITY ACT/SUPERFUND
AMENDMENTS AND REAUTHORIZATION ACTS
(CERCLA/SARA)**

SECTION 7

COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT/SUPERFUND AMENDMENTS AND REAUTHORIZATION ACTS (CERCLA/SARA)

A. Applicability of this Protocol

This protocol applies to all Army facilities. Currently, this section contains protocols for implementing the requirements of the Comprehensive Environmental Response, Compensation, and Liability Act (Superfund) / Superfund Amendments and Reauthorization Acts (CERCLA/SARA).

The CERCLA / SARA protocol is used to determine the compliance status of the management activities associated with the identification, investigation, and cleanup of hazardous materials contamination.

Specific state regulations are not included in this protocol.

B. Federal Legislation

- The CERCLA was enacted on 11 December 1980 as a series of programs to remedy uncontrolled releases of contaminants from hazardous waste sites. CERCLA addresses past, present, and threatened releases of hazardous substances, pollutants, and contaminants that "may pose an imminent and substantial danger to the public health or welfare" (CERCLA, S.104(a)(1)). Notification and response procedures and authorities for these releases are established in the law, with the provision that they are subject to the more detailed regulatory descriptions provided in the National Contingency Plan.
- The SARA was passed in October 1986 to reauthorize the funding provisions, and to amend the authorities and requirements of CERCLA and associated laws. SARA establishes the Defense Environmental Restoration Program (DERP), which consists of two major programs: the Installation Restoration Program (IRP), which applies to real property under U.S. jurisdiction and currently under the control of the Army, and the Formerly Used Defense Sites (FUDS) program, which applies to real property under U.S. jurisdiction and formerly under the control of the Army. SARA is divided into five major titles, the first two of which are of importance to the IRP. The other three are only indirectly related and will not be mentioned here.

- Title I - Provisions Relating Primarily to Response and Liability contains most of the amendments to CERCLA. Of particular interest to the IRP is Section 120 in which response actions at Federal facilities are addressed. The Defense Environmental Restoration Program (DERP) and the IRP are subject to and must be consistent with Section 120.
- Title II - Miscellaneous Provisions includes additional amendments to CERCLA and to other associated laws. DERP (including IRP) is codified into law as Section 211 of SARA and amended as Chapter 160 of Title 10 of United States Code. DERP is thus not a component of CERCLA, though it is subject to and must be consistent with CERCLA.
- The IRP is designed to clean up past hazardous waste disposal or spill sites. Current hazardous material / hazardous waste operations and spills on an installation are handled under other programs (RCRA and SPCC [Spill Prevention, Containment and Control], respectively).
- Under CERCLA (Superfund) United States Environmental Protection Agency (USEPA) has promulgated regulations in 40 CFR 302 that require notification to USEPA whenever there is a release of a reportable quantity of any hazardous substance. Release into the environment is interpreted broadly to mean release into water, air, or onto the land. If a release is contained within a building or closed facility, it does not need to be reported under these regulations. The regulations specify reportable quantities of 1 pound for all hazardous substances other than those with different reportable quantities as listed in Table 302.4 of 40 CFR 302. Any Army installation that releases a reportable quantity of a hazardous substance is responsible to comply with these regulations.
- Under SARA, the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA) was passed. This act was designed to promote emergency planning and preparedness at both the state and local level. It provides citizens and local governments with information regarding the potential hazards in their community. EPCRA requires the use of emergency planning and designates state and local governments as recipients for information regarding chemicals and toxins used in the community. Although Federal facilities are not currently required to comply with Title III, Army policy is to adhere with substantive requirements.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with all Federal, state, and local environmental regulations. It makes the head of each executive agency responsible for seeing to it that the agencies, facili-

ties, programs, and activities it funds meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such regulations. In addition, the Executive Order requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Requirements

- SARA requires for Federal facilities that:

"State laws concerning removal and remedial action, including state laws regarding enforcement, shall apply to removal and remedial actions at facilities owned or operated by a department, agency, or instrumentality of the United States when such facilities are not included on the National Priorities List [NPL]." (Section 120(a)(4))

- Only a few states at the time of publication of this manual have CERCLA-like laws. These laws apply to non-NPL sites, and consequently certain authorities and requirements will vary from state to state.
- State (and local) Applicable or Relevant and Appropriate Requirements (ARARs) are those cleanup standards, standards of control and other substantive environmental protection requirements, criteria, or limitations promulgated under Federal Law or limitations promulgated under Federal law or state law that specifically address a hazardous substance, pollutant, contaminant, remedial action, location, or other circumstance at a CERCLA site. Relevant and appropriate requirements, criteria, or limitations promulgated under Federal or state law that, while not applicable to a hazardous substance, pollutant, contaminant, remedial action, location, or other circumstance at a CERCLA site, address problems or situations sufficiently similar to those encountered at the CERCLA site that is well suited to the particular site. ARARs are used to establish the standards for cleanup as a function of the chemicals involved, the location, the suspected health effects, response action technologies proposed at the site.

D. DoD Regulations

None.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 9, *Environmental Restoration Program*, implements the remedial response aspect of CERCLA, as amended by SARA. It provides guidance for the management of IRP and FUDS programs. It details the procedures and the required documents necessary at each stage of the remedial process, from Preliminary Assessment/Site Inventory (PA/SI), through Remedial Investigation/Feasibility Study (RI/FS), to the Remedial Action (RA). AR 200-1 also provides guidance for writing oil and hazardous substance contingency plans. It also provides guidance for dealing with all manner of hazardous materials.
- AR 200-2, *Environmental Effects of Army Actions*, defines Army policy relative to compliance with the National Environmental Policy Act (NEPA) when projects are undertaken pursuant to the requirements of CERCLA / SARA. Basically, this section outlines the required environmental records to be completed during the course of a remedial action under NEPA, from identification through completion. Other chapters in AR 200-2 give detailed information on preparing the documents: Environmental Assessments (EAs), Environmental Impact Statements (EISs), Categorical Exclusions (CXs), Findings of No Significant Impact (FNSIs), Notices of Intent (NOIs), and Records of Decision (RODs). (See Section 12, *National Environmental Policy Act*, and the Appendixes to Section 16 of this manual, *Environmental Program Management*, for more information on these documents.)

F. Key Compliance Requirements

- The legal mandates for the Army Installation Restoration Program are CERCLA and SARA. Objectives of the program are to identify, investigate, cleanup and close out IRP sites.
- Hazardous Substance Release Reporting - Army installations are required to notify USEPA and appropriate state agencies when a release of a reportable quantity of a hazardous substance occurs. The release includes any discharge, spill, or leak to the air, water or onto the land as stipulated in 40 CFR 302, *Designation, Reporting Quantities, and Notification*.
- Community Right-to-Know - Army installations that use or manufacture hazardous or toxic chemicals are required to comply with the regulations of EPCRA.

G. Responsibility for Compliance

- **Installation Commanders (ICs) will:**

- monitor proposed actions and programs within their commands

- task the appropriate staff with preparation of environmental assessments (EAs) and environmental impact statements (EISs) and development of public involvement

- assure that appropriate environmental documentation is prepared and forwarded to the appropriate proponent

- initiate the preparation of necessary environmental documentation and assess the environmental consequences of proposed programs and projects

- coordinate appropriate environmental documents and public affairs initiatives with MACOM, Headquarters Department of the Army (HQDA) agencies, the Army Environmental Office and state and federal regulatory agencies

- assist in the review of environmental documents prepared by DoD and other Army or Federal agencies, as requested.

- The IC is responsible for all IRP projects on the installation. The IC will ensure that proposals for real property transaction concerning installations included in the IRP will be immediately reported through channels to HQDA (ENVR-E).

- The IC will assign an on-scene coordinator/remedial project manager (OSC/RPM) for all on-going IRP projects on the installation.

- On-scene coordinator/remedial project manager (OSC/RPM) will act as the IC's representative on all IRP matters and perform the duties described in 40 CFR 300.33(b). The OSC/RPM will also:

- coordinate with the MACOM (for ARNG, National Guard Bureau; for USAR, MUSARCs), USATHAMA, and the Corps of Engineers on all proposals for removal and remedial actions, on installation's POC for regulatory agencies, on monitoring the activities of contractors as requested, on reviewing, and comment on draft reports prepared by USATHAMA or the Corps of Engineers on IRP activities, on reviewing response plans and recommendations for IRP response actions and proposed future actions, ensuring that currently operating facilities are not and do not become sources of hazardous materials contamination, ensuring that USEPA and state, regional, and local officials have adequate opportunity for timely review and comment on

proposed activities, establishing a technical review committee (TRC) per AR 200-1, para. 9-10, developing, implementing and maintaining a community relations program for IRP activities that meets all regulatory guidelines

-establishing an administrative record of the installation that is included or proposed for inclusion on the National Priorities List (NPL).

- USEPA establishes and recommends sites for inclusion on the NPL.
- Public Affairs Office (PAO) will establish the necessary supporting Public Awareness Program(s).
- Installation Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department is responsible for making periodic fire safety inspections of flammable/ combustible storage and handling areas on the installation.

H. Key Compliance Definitions

These definitions were obtained from Army, DoD, and compliance regulations cited previously.

- *Active Waste Disposal Site* - any disposal site other than an inactive site.
- *Administrative Record* - consists of all documents that have a legal bearing on the remedial action. It is required for every response action, is used for judicial review, and forms the basis for the selection of response actions at Third-Party sites.
- *Applicable or Relevant and Appropriate Requirements (ARARs)* - Federal and state laws that must be considered when a remedial action is being chosen.
- *Class I* - includes projects that are out of compliance, have been the subject of an enforcement action, or that involve a signed consent order or compliance agreement with USEPA or a state government agency. USEPA considers these projects to be of critical priority.
- *Class II* - includes those projects that must be dealt with in an agency's current planning cycle to meet a compliance deadline in the immediate future. If projects in this class are not programmed for funding during the current budget cycle, they may be out of compliance before needed money can be provided.
- *Class III* - includes other projects that the individual Federal agencies believe are important but are not related to an imminent compliance requirement.

Projects that will prevent pollution through changes in process technology, re-design, etc., are also included in this class.

- *Cost* - the amount of funds required for putting in place the necessary environmental protection measures, irrespective of the appropriation chargeable.
- *Decision Document* - a means of recording significant decisions in the IRP. Steps or stages that merit a Decision Document include:
 - selecting a remedial action
 - initiating long-term monitoring
 - initiating a removal action
 - closing out a site
 - reactivating a site.

Decision Documents may be used for both NPL and non-NPL sites.

- *Defense Environmental Restoration Account (DERA)* - the Department of Defense funding program for the Installation Restoration Program (IRP).
- *Demolition* - the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations.
- *Environmental Assessment (EA)* - refers to a concise public document prepared by the installation in order to evaluate the proposed action and its potential effects on the environment. In general, it serves to:
 - briefly provide sufficient evidence and analysis for determining whether to prepare an environmental impact statement, or a finding of no significant impact
 - aid an agency's compliance with the Act when no environmental impact statement is necessary
 - facilitate preparation of a statement when one is necessary.

The Environment Assessment shall include brief discussions of the need for the proposal, or alternatives, and of the environmental impacts of the proposed actions and alternatives, and a listing of the agencies and persons consulted.

- *Environmental Impact Statement (EIS)* -a detailed written statement required by NEPA for major Federal actions with significant environmental effects.
- *Feasibility Study* - within the IRP (or CERCLA), the means for development, evaluation, selection, and description of remedial action alternatives.

- **Fire Area** - That portion of a building separated from the remainder by walled construction having a rated fire resistance of at least 1 hour. All openings must be protected by an approved assembly having a fire resistance rating of at least 1 hour.
- **FNSI (Finding of No Significant Impact)** - a document that briefly presents the reasons why an action, not otherwise excluded, does not need an EIS.
- **Good Management Practice (GMP)** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- **Liquid** - Any material with a fluidity greater than that of 300 penetration asphalt when tested in accordance with ASTM Test D-5-73. When not otherwise identified, the term "liquid" will include both flammable and combustible liquid.
- **National Priorities List (NPL)** - the list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial response.
- **NOI (Notice Of Intent)** - a notice that an EIS will be prepared and considered. This applies to all significant Federal action. It should contain:
 - (a) a description of the proposed action and possible alternatives
 - (b) the proposed scoping process and schedule
 - (c) the name and address of the person who can give more information.
- **Preliminary Assessment** - the process of collecting and reviewing available information about a known or suspected hazardous waste site or release. The Army, USEPA, or states use this information to determine if the site requires further study.
- **Records of Decision (ROD)** - a public document that explains which cleanup alternative(s) will be used at National Priorities List sites. The Record of Decision is based on information and technical analysis generated during the remedial investigation / feasibility study and consideration of public comments and community concerns.
- **Remedial Action (RA)** - the actual construction or implementation phase that follows the remedial design of the selected cleanup alternative at a site.
- **Remedial Action Plan (RAP)** - the process of selecting and describing remedial actions; also the report documenting that process.
- **Remedial Design (RD)** - an engineering phase that follows the Record of Decision when technical drawings and specifications are developed for the subsequent remedial action at a site.

- **Remedial Investigation (RI)** - the IRP- or CERCLA-related process to determine the nature and extent of the problem posed by a release or threatened release.
- **Remedial Project Manager (RPM)** - the Army official responsible for overseeing remedial responses at IRP sites in accordance with the National Contingency Plan, Section E, and Army policies.
- **Remedial Response** - a long-term action that stops or substantially reduces a release or threatened release of a hazardous substance that is serious, but does not pose an immediate threat to public health and/or the environment.
- **Removal Response** - an immediate action taken over the short-term to address a release or threatened release of a hazardous substance that poses a significant threat to public health or the environment.
- **Renovation** - altering, in any way, one or more facility components. Operations in which load-supporting structural members are wrecked or taken out are excluded.
- **Health Risk Assessment** - an evaluation performed as part of the remedial investigation to assess conditions at a site and determine the risk posed to public health and/or the environment.
- **Site Close-Out** - may occur during several different stages of the cleanup process, depending on the particular site and its circumstances. Regardless of the stage during which close-out occurs, the process could be accompanied by appropriate documentation.
- **Site Inspection** - a technical phase that follows a preliminary assessment designed to collect more extensive information on a hazardous waste site. The information is used to score the site with the Hazard Ranking System to determine whether response action is needed.
- **Structural Member** - any load-supporting member of a facility, such as beams and load-supporting walls; or any nonload-supporting member, such as ceilings and nonload-supporting walls.
- **Third Party Site** - a non-Army site (landfill, recycling facility) to which the Army is alleged to have contributed hazardous wastes directly or through a contractor.

| RIGHT-TO- KNOW 7-13. Installations may be required to submit MSDS sheets or an acceptable alternative and an inventory form containing Tier I information to the State and/or local emergency response commission and the fire department with jurisdiction over the facility for each hazardous chemical present at specific types of facilities (40 CFR 370.20- 28; Subpart B). | <p>Verify that MSDA sheets, or an acceptable alternative, and an inventory form containing Tier I information are submitted in the following cases: (1)(2)</p> <ul style="list-style-type: none"> - when there are hazardous chemicals in excess of 10,000 pounds - when there are extremely hazardous substances in an amount greater than or equal to 500 lbs (55 gals) or the threshold planning quantity (Appendix 7-1) - when the facility falls under the Standard Industrial Classification Codes 20 - 39, all hazardous chemicals present between 10,000 and zero pounds. <p>Determine if instead of submitting MSDS sheets the following has been submitted: (1)(2)</p> <ul style="list-style-type: none"> - a list of hazardous chemicals for which the MSDS is required, grouped by hazard category - the chemical or common name of each hazardous chemical - any hazardous component of each hazardous chemical except when reporting mixtures. <p>Verify that revised MSDS sheets are provided within three months after the discovery of significant new information concerning the hazardous chemical. (1)(2)</p> <p>(NOTE: A Tier II form may be submitted instead of a Tier I form.)</p> |

Appendix 7 - 1

Consolidated List of Chemicals Covered in Title III of Superfund Amendments and Reauthorization Act (SARA)

This consolidated chemical list includes chemicals subject to reporting requirements under Title III of SARA of 1986. This list, however, does not contain all chemicals subject to reporting requirements in Section 311 and 312 of SARA Title III. These hazardous chemicals, for which material safety data sheets (MSDS) must be developed under Occupational Safety and Health Act Hazard Communication Standards, are identified by broad criteria, rather than enumeration. There are over 50,000 such substances that meet the criteria. The consolidated list has been prepared to help determine whether there is a need to submit reports under Section 304 or 313 of Title III and, for a specific chemical, what reports need to be submitted.

The list includes chemicals referenced under the four following Federal statutory provisions:

- (1) SARA Section 302 Extremely Hazardous Substances - The presence of which, in sufficient quantities, requires certain emergency planning activities to be conducted. Releases of these substances are also subject to reporting under Section 304 of Title III. The final rule listing the extremely hazardous substances and their threshold planning quantities (TPQ), was published 22 Apr 87 (52 CFR 13370).
- (2) CERCLA Hazardous Substances (RQ) Chemicals - Releases of which are subject to reporting under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or "Superfund") of 1980. Such releases are also subject to reporting under Section 304 of Title III. CERCLA hazardous substances, and their reportable quantities (RQ), are listed in 40 CFR Part 302, Table 302.4.
- (3) SARA Section 313 Toxic Chemicals - Emissions or releases of which must be reported annually as part of SARA Title III's community right-to-know provisions. The Section 313 rule containing these chemicals was published on 4 Jun 87 (52 CFR 21152).
- (4) RCRA Hazardous Wastes - from the "P" and "U" lists (40 CFR 261.33) of specific chemicals. RCRA hazardous wastes from the "F" and "K" lists are not included here; such waste streams are also CERCLA hazardous substances. This listing is provided as an indicator that you may already have data on a specific chemical that can be used for Title III reporting purposes.

There are four columns in the consolidated list corresponding to these four statutory provisions. If a chemical is listed as an extremely hazardous substance under Section 302, its TPQ is given in the Section 302 column. Similarly, the CERCLA RQ is given for those chemicals that are CERCLA hazardous substances. A key to the symbols used in the Section 302 and CERCLA columns precedes the list. An "X" in the column for Section 313 indicates that the chemical is subject to reporting under Section 313.

The letter-and-digit code in the RCRA column is the chemical's RCRA hazardous waste code. A blank in any of these columns indicates that the chemical is not subject to the corresponding statutory authorities. A fifth column, headed "State," is left entirely blank, to be checked if State reporting requirements apply to a chemical. The heading, "Section 304" over the Section 302 and CERCLA lists indicates that the reporting requirements in Section 304 of SARA Title III apply to Section 302 extremely hazardous substances and CERCLA hazardous substances. As indicated, most chemicals on the consolidated list are subject to reporting requirements under more than one statutory provision.

The Chemical Abstract Service (CAS) registry number is provided for each chemical on the list.

For additional copies of this list, address requests to:

Title III Hotline
US Environmental Protection Agency
WH-562A
401 M Street, SW
Washington, DC 20640
Phone: (800) 535-0262

Key to Symbols in the Consolidated Chemical List

- # - Indicates that the CERCLA reportable quantity (RQ) is subject to change when an assessment of potential carcinogenicity and/or chronic toxicity is completed; until then, the statutory RQ applies. See 50 CFR 13456 (4 Apr 85) and 51 CFR 34541 (29 Sep 86).
- ## - Indicates that an adjusted RQ has been proposed, but a final judgment has not been made. See 50 CFR 13456 (4 Apr 85).
- ### - EPA may adjust the RQ for methyl isocyanate in a future rulemaking; until then, the statutory 1-pound applies. See 52 CFR 8140 (4 Apr 84).
- + - EPA has proposed to adjust the RQ for radionuclides by establishing RQs in units of curies; until then, the 1-pound RQ applies. See 52 CFR 41593 (16 March 87).
- * - Indicates that the chemical is proposed for deletion from the Section 302 (a) extremely hazardous substances. See CFR 41593 (17 Nov 86).
- ** - Indicates that no RQ is assigned to this generic or broad class. See CFR 13456 (4 Apr 85).
- *** - The chemical name associated with this CAS registry number is listed as hydrochloric acid under the CERCLA hazardous substances and the Section 313 toxic chemicals and as hydrogen chloride (gas only) under the Section 302 (a) extremely hazardous substances.
- '' - Ferric dextran was designated as a hazardous substance under CERCLA solely because of its listing as a hazardous waste under Section 3001 of RCRA. EPA recently proposed to delist ferric dextran from Table 302.4 of CFR 302.4 and thereby remove its designation as a CERCLA hazardous substance. See 51 CFR 34541 (29 Sep 86).
- ''' - Uranyl acetate and uranyl nitrate are currently being evaluated for their radioactive properties. Their RQs may be further adjusted in future rule making, adjusting the RQ of radionuclides. See 51 CFR 34541 (29 Sep 86).

SARA TITLE III CONSOLIDATED CHEMICAL LIST

This is an alphabetical listing of the consolidated list of chemicals.

Numbered chemicals are listed first.

| Chemical Name | 302 | CERCLA | 313 | RCRA | CAS No. |
|--|-----|--------|-----|------|-----------|
| (1,1'-Biphenyl)-4,4' diamine, 3,3' dimethoxy- | | 10 | x | U091 | 119-90-4 |

Section 8

TOXIC SUBSTANCES CONTROL ACT (TSCA)

SECTION 8

TOXIC SUBSTANCES CONTROL ACT (TSCA)

A. Applicability of this Protocol

This protocol applies to all Army installations. Currently this section contains protocols for polychlorinated biphenyls (PCBs). PCBs are regulated on the Federal level by the United States Environmental Protection Agency (USEPA), though some states have also promulgated regulations. Specific state regulations are not included in this protocol.

The TSCA protocol is used to determine the compliance status of the management activities associated with: PCBs and in-service and out-of-service PCB items. While asbestos in schools is also regulated under TSCA, those requirements are found in the section titled Asbestos Abatement.

B. Federal Legislation

(NOTE: Additional programs may be added as other specific areas are regulated.)

- PCBs
- The Toxic Substances Control Act (TSCA) of 1976 [PL 94-469, 15 USC 260] required the USEPA to regulate and control harmful chemicals and toxic substances in commercial use. Congress enacted TSCA to reduce unreasonable risks from chemicals to human health and the environment. Section 6 of the TSCA addresses the regulation of Polychlorinated Biphenyls (PCBs). The Federal regulations for PCBs are contained in 40 CFR 761, *PCB Regulations*.

These regulations include specific requirements for most uses of PCBs. The uses most likely to be present at Army installations are in the following systems or applications:

- transformers
- capacitors
- heat transfer systems
- hydraulic systems
- electromagnets
- switches and voltage regulators
- circuit breakers, reclosers, and cables.

- 40 CFR 761 contains the regulations to control the use, storage, and disposal of PCBs and PCB Items. Part 761 provides definitions and categorizes PCBs in three concentration ranges: concentrations less than 50 parts per million (ppm), concentrations between 50 and 500 ppm, and concentrations greater than 500 ppm.
- TSCA specifies that all agencies of the Federal government must fully comply with its requirements. However, Section 22, *National Defense Waiver*, states that USEPA, upon request of the President, may grant a waiver to a facility if it is in the interest of national defense.

The protocol details the management requirements for PCB Transformers and PCB Large, High- and Low-Voltage Capacitors, as these electrical equipment are the most prevalent on Army installations. General requirements are provided in this review protocol for the other uses identified above so the evaluator can summarize the compliance status of these systems.

- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with all Federal, state, and local environmental regulations. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities it funds meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such regulations. Additionally, the Executive Order requires each agency to ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Requirements

- PCBs

Some states have agreements with the USEPA to administer the Federal regulations. According to the general structure of Federal regulatory programs, any state regulations must adopt the Federal regulations as a minimum set of requirements. In some cases, state regulations have been developed to regulate PCBs more stringently than the Federal program. State PCB regulations may provide additional regulatory requirements beyond the Federal program to address a specific concern or activity sensitive in that state. State regulations may supersede the Federal regulations in areas including the following:

- PCBs may be regulated as a hazardous waste.

- PCBs may be regulated to a lower concentration. For example, regulated PCBs in one state are defined to be materials and fluids that contain PCBs at a concentration greater than 7 ppm.
- Shipments of PCBs may require manifest documents.
- Analyses may be required to quantify the PCB concentration in all PCB Items.
- Additional inspections of select PCB Items and specific disposal requirements for PCBs and PCB Items may also be required.
- Generators of PCBs and PCB Items may be required to obtain disposal permits.

D. DoD Regulations

- None.

E. U.S. Army Regulations

- PCBs
- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 5, paragraph 6, *Polychlorinated Biphenyls*, mandates Army compliance with TSCA and other applicable Federal statutes. It also outlines a recordkeeping system for PCBs and PCB-related Items.

F. Key Compliance Requirements

- PCBs
- The Federal PCB regulations allow PCB Equipment (Transformers and Capacitors) that are in service to remain in service. While in service, they must be labeled, inspected, and any leaks detected must be corrected. Once taken out of service, PCB Equipment can be stored for disposal for 1 year in a specially designed storage area. PCB fluids must be disposed of by incineration in a specially licensed incinerator and PCB Equipment (without the fluid) must be disposed of in a specially licensed landfill.

G. Responsibility for Compliance

• PCBs

- Directorate Engineering and Housing (DEH) through the Exterior Electrical Shop, or the Environmental Coordinator, is responsible for identifying, inspecting, marking (labeling), and properly servicing PCB Electrical Equipment (Transformers and Capacitors).
- Environmental Coordinator is responsible for ensuring that out-of-service items are located in a licensed and technically adequate PCB storage facility. Normally, such facilities are located at a DRMO and the DRMO is responsible for storage, disposal transportation, and contracting for disposal.

H. Key Compliance Definitions

These definitions were obtained from Army, DoD, and compliance regulations sited previously.

- *Active Waste Disposal Site* - any disposal site other than an inactive site.
- *Annual Document Log* - the detailed information maintained at the facility on the PCB waste handling at the facility.
- *Capacitor* - a device for accumulating and holding a charge of electricity and consisting of conducting surfaces separated by a dielectric. Types of capacitors are as follows:
 - 1) "Small Capacitor" - a capacitor that contains less than 1.36 kg (3 lb) of dielectric fluid.
 - 2) "Large, High-Voltage Capacitor" - a capacitor that contains 1.36 kg (3 lb) or more of dielectric fluid and operates at 2,000 volts (a.c. or d.c.) or above.
 - 3) "Large, Low-voltage Capacitor" - a capacitor that contains 1.36 kg (3 lb) or more of dielectric fluid and operates below 2,000 volts (a.c. or d.c.).
- *Certificate of Deposit* - the document the owner or operator of a disposal facility prepares each time he accepts a shipment of manifested PCB waste.
- *Chemical Waste Landfill* - a landfill at which protection against risk of injury to health or the environment from migration of PCBs to land, water, or the atmosphere is provided from PCBs and PCB Items deposited therein by locating, engineering, and operating the landfill as required.

- **Commercial Storer of PCB Waste** - the owner or operator of each facility subject to the PCB storage facility standards of 40 CFR 761.65, and who engages in storage activities involving PCB waste generated by others, or PCB waste that was removed while servicing the equipment owned by others and brokered for disposal. The receipt of a fee or any other form of compensation for services is not necessary to qualify as a commercial storer of PCB waste. It is sufficient under this definition that the facility stores PCB waste generated by others or the facility removed the PCB waste while servicing equipment owned by others. If a facility's storage of PCB waste at no time exceeds 500 gallons of PCBs, the owner or operator is not required to seek approval as a commercial storer of PCB waste.
- **Cost** - the amount of funds required to put in place the necessary environmental protection measures, irrespective of the appropriation chargeable.
- **Demolition** - the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations.
- **Disposal** - to intentionally or accidentally discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB Items.
- **Emergency Renovation Operation** - a renovation operation that was not planned but results from a sudden, unexpected event. This term includes operations necessitated by nonroutine failures of equipment.
- **Emergency Situations** - for continuing use of a PCB Transformer exists when:
 - 1) neither a non-PCB Transformer nor a non-PCB Contaminated Transformer is currently in storage for reuse or readily available within 24 hours for installation, or
 - 2) immediate replacement is necessary to continue service for power users.
- **Facility** - any institutional, commercial, or industrial structure, installation, or building (excluding apartment buildings having no more than four dwelling units).
- **Facility Component** - any pipe, duct, boiler, tank, reactor, turbine, or furnace at or in a facility; or any structural member of a facility.
- **Good Management Practice (GMP)** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.

- ***In or Near Commercial Buildings*** - within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 meters of a nonindustrial, nonsubstation building.
- ***Inactive Waste Disposal Site*** - any disposal site or portion of it where additional asbestos-containing waste material cannot be deposited and where the surface is not disturbed by vehicular traffic.
- ***Industrial Building*** - a building directly used in manufacturing or technically productive enterprises.
- ***Leak or Leaking*** - any instance in which a PCB article, PCB container, or PCB Equipment has any PCBs on any portion of its external surface.
- ***Lowest Living Area (LLA)*** - is defined as follows:
 1. For structures without subsurface areas, the LLA is the ground floor.
 2. For structures with subsurface areas, the LLA is defined as the lowest area in that structure that has a finished, hard surface floor (for example, concrete or tiled) that is or could be used. A dirt breezeway is not an LLA, but an unfinished basement with a concrete floor is, regardless of what the current occupants are using the area for.
- ***Mark*** - the descriptive name, instructions, cautions, or other information applied to PCBs and PCB Items, or other objects subject to these regulations.
- ***Marking*** - the marking of PCB Items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets the requirements of these regulations.
- ***Mineral Oil PCB Transformers*** - any transformer originally designed to contain mineral oil as the dielectric fluid and which has been tested and found to contain 500 ppm or greater PCBs.
- ***Non-PCB Transformers*** - any transformer that contains less than 50 ppm PCB except that any transformer that has been converted from a PCB Transformer or a PCB-contaminated transformer cannot be classified as a non-PCB Transformer until reclassification has occurred in accordance with the requirements of 40 CFR 761.30 (a)(2)(v).
- ***Outside Air*** - the air outside buildings and structures.
- ***PicoCurie (pCi)*** - quantity of radioactive material producing 2.22 nuclear transformations/minute.

- ***PCB Annual Document Log*** - the detailed information maintained at the facility on the PCB waste handling at the facility.
- ***PCB Annual Report*** - the written document submitted each year by each disposer and commercial storer of PCB waste to the appropriate USEPA Regional Administrator. The annual report is a brief summary of the information included in the annual document log.
- ***PCB Article*** - any manufactured article, other than a PCB Container, that contains PCBs and whose surface(s) has been in direct contact with PCB. This includes capacitors, transformers, electric motors, pumps, and pipes.
- ***PCB Article Container*** - any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB articles or PCB Equipment, and whose surface(s) has not been in direct contact with PCBs.
- ***PCB Container*** - any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB Articles and whose surface(s) has been in direct contact with PCBs.
- ***PCB-Contaminated Electrical Equipment*** - any electrical equipment including, but not limited to, transformers, capacitors, circuit breakers, reclosers, voltage regulators, switches, electromagnets, and cable, that contain 50 ppm or greater PCB, but less than 500 ppm PCB.
- ***PCB Equipment*** - any manufactured item, other than a PCB Container or a PCB Article Container, which contains a PCB Article or other PCB Equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures.
- ***PCB Item*** - any PCB Article, PCB Article Container, PCB Container, or PCB Equipment, that deliberately or unintentionally contains or has as a part of it any PCB or PCBs at a concentration of 50 ppm or greater.
- ***PCB Transformer*** - any transformer that contains 500 ppm PCB or greater.

LEVELS OF PCB ppm

| | |
|--------------------|---------------------------------------|
| less than 50 ppm | Non-PCB Transformer |
| 50 ppm - 499 ppm | PCB-Contaminated Electrical Equipment |
| 500 ppm or greater | PCB Transformer |

- *Posing an Exposure Risk to Food or Feed* - being in any location where human food or animal feed products could be exposed to PCBs released from a PCB item.
- *Removal Response* - an immediate action taken over the short-term to address a release or threatened release of a hazardous substance that poses a significant threat to public health or the environment.
- *Retrofill* - to remove PCB or PCB contaminated dielectric fluid and to replace it with either PCB, PCB contaminated, or non-PCB dielectric fluid.
- *Rupture of a PCB Transformer* - a violent or nonviolent break in the integrity of a PCB Transformer caused by an overtemperature and/or overpressure condition that results in the release of PCBs.

Appendix 8 - 2

DIELECTRIC FLUID TREND NAMES AND MANUFACTURERS

1. U.S. Manufactured Dielectrics:

| Name | Manufacturer |
|-------------------|------------------------|
| Aroclor | Monsanto |
| Aroclor B | Mallory |
| Sbestol | American Corporation |
| Askarel Hevi-Duty | Hevi-Duty Corporation |
| Askarel * | Ferranti-Packard, Ltd. |
| Askarel | Universal Mfg. Co. |
| Chlorextol | Allis-Chalmers |
| Chlorinol | Sparagoe Electric |
| Chlorphen | Jard Company |
| Diactor | Sangamo Electric |
| Dykanol | Cornell Dubilier |
| Elemex | McGraw Edison |
| Eucarel | Electric Utilities Co. |
| Hyvol | Aerovox |
| Inerteen | Westinghouse Electric |
| No-Flamol | Wagner Electric |
| Pyranol | General Electric |
| Saf-T-Kuhl | Kuhlman Electric |

* Generic name used for insulating liquids in capacitors and transformers.

2. Foreign Manufactured Dielectrics:

| Name | Manufacturer |
|------------|--------------------|
| Clophen | Bayer (Germany) |
| Fenclo | Caffaro (Italy) |
| Kennechlor | Mitsubishi (Japan) |
| Phenoclor | Prodelec (France) |
| DK | Caffaro (Italy) |
| Pyralene | Prodelec (France) |
| Solvot | USSR |
| Santotherm | Mitsubishi (Japan) |

3. Transformers that list other dielectrics or do not bear a manufacturer's identification or service plate on the transformer: if the transformer contains any of the dielectrics (commonly referred to as askarels), it is to be certified as a PCB transformer containing in excess of 500 ppm PCB and no laboratory testing is necessary.

Section 9

**FEDERAL INSECTICIDE, FUNGICIDE, AND RODENTICIDE ACT
(FIFRA)**

SECTION 9

FEDERAL INSECTICIDE, FUNGICIDE, AND RODENTICIDE ACT

A. Applicability of this Protocol

This protocol applies to any Army facility that uses, stores or handles pesticides. Pesticides are regulated on the Federal level, on the state level, and by specific DoD and U.S. Army regulations. This protocol integrates the requirements of these regulations into a single document that normally will apply to any facility that handles pesticides.

Although specific state regulations are not included in this protocol, all major areas that are typically regulated on the state level are included here in a generic manner.

Much of the guidance for pest management involves Operation and Maintenance (O&M) procedures. This protocol combines O&M guidance and compliance matters. It is used to determine the compliance status of operations, facilities, and equipment used to store and apply pest control chemicals. The protocol addresses the adequacy of facilities, operating procedures, personnel qualifications, and reporting of pesticide use.

B. Federal Legislation

- The Federal Insecticide, Fungicide, and Rodenticide Act as amended (P.L. 92-516; 7 U.S.C. 136 et seq.) (FIFRA). Under FIFRA, the United States Environmental Protection Agency (USEPA) is responsible for the registration of new pesticides and for their reregistration to ensure that, when used according to label directions, they will not present any unreasonable risks to human health or the environment. FIFRA regulations apply to persons who manufacture, market, formulate, distribute, use, or dispose of pesticides and pesticide containers.
- 29 CFR 1910, *OSHA Safety and Health Standards*. These Occupational Safety and Health standards govern storage and handling of flammable and combustible liquids. Even though not considered strictly as environmental regulations, they are included in this protocol because they play a part in the pest management process.
- 40 CFR Chapter 1, Subchapter E, *Pesticide Programs*. Regulations pertaining to management of pesticides are contained in 40 CFR 152-186. 40 CFR 162 (later revised to include 40 CFR 156) contains the definitions, labeling requirements, and other classification information. 40 CFR 165 contains regulations

for the storage, disposal, and overall management of pesticides and pesticide containers. 40 CFR 171 addresses the certification of persons who apply restricted use pesticides.

- 40 CFR 165, *Regulations for the Acceptance of Certain Pesticides and Recommended Procedures for the Disposal and Storage of Pesticides and Pesticide Containers*. The majority of the Federal regulatory requirements contained in the worksheet for this section have been developed from 40 CFR 165 as this part provides the facility and operating requirements for the storage and application of pest management chemicals. The regulations in 40 CFR 165 that address the disposal of pesticides and pesticide containers apply to all pesticides. Pesticide containers registered for home or garden use are exempt from these regulations if they are securely wrapped in several layers of paper and disposed of singly in a municipal solid waste facility. The recommended procedures and criteria for the storage of pesticides and pesticide containers provided in 40 CFR 165 apply to facilities that store pesticides classified as toxic or moderately toxic, and bear the signal words DANGER, POISON, or WARNING, or the skull and crossbones symbol. Pesticides registered under an experimental use permit should also be stored and managed in accordance with 40 CFR 165.
- 40 CFR 171, *Certification of Pesticide Applicators*. These regulations outline the categories and standards for the certification of commercial and private applicators of restricted use pesticides as well as requirements for the submission and approval of state plans for certification. Competence in the use and handling of restricted use pesticides is determined on the basis of written exams covering the general standards applicable to all categories of pesticide applicators as well as additional standards for each category for which the applicator is seeking certification.

C. State/Local Requirements

State pesticide regulatory programs are to be at least as stringent as FIFRA. State and local programs typically contain regulations tailored to an industry or activity that is prevalent or particularly sensitive in a state. State and local pesticide regulations in many cases provide more stringent standards or specifically identify a requirement that may be qualitatively regulated under the Federal program.

State and local pesticide programs generally include regulations addressing the following topics:

- restrictions or requirements for the sale, distribution, or use of selected pesticides

- disposal requirements for excess pesticides and pesticide wastes such as pesticide containers
- restrictions on the control of specific animal or insect species
- specifications for bulk pesticide storage tanks, storage facilities
- operational requirements for selected application methods
- recordkeeping and applicator certification requirements.

D. DoD Regulations

- DoD Directive 4150.7, *Pest Management Program*, sets forth the policy, responsibilities, and procedures for pest management programs. This directive establishes the DoD policy of maintaining safe, efficient, and environmentally sound integrated pest management programs to prevent or control pests that may adversely affect health or damage structures, material, or property. The DoD Plan for the Certification of Pesticide Applicators stipulates the certification of U.S. Army Reserve military and civilian pest managers.
- DoD 4160.21-M, *Defense Utilization and Disposal Manual*, in Chapter 9, *Hazardous Property Management*, sets out guidance for the handling, processing, and disposing of hazardous property in accordance with applicable environmental, safety, and other laws and regulations.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, prescribes responsibilities, policies, and procedures to preserve, protect, and restore the quality of the environment.
- Army Regulation (AR) 420-76, *Pest Management*, provides policies, standards, and procedures for pest control activities at U.S. Army-controlled facilities. It sets minimum levels of pest management operations in real property maintenance activities (RPMA) and states that these operations are to be compatible with national environmental protection mandates.

F. Key Compliance Requirements

- Certification - A specific number of certified pesticide applicators must be present at each facility according to the productive man-years stipulated by the pest control needs of the facility (DoD 4150.7; Appendix 9-1). Certification must be obtained for specific facility pest management activities (40 CFR 171.3).

- Storage, Mixing, and Personnel Facilities - Facilities are required to provide some separation for select components of the pest management shop. Pesticides shall be stored separate from other operations and where food is located, stored, prepared, or served. Facilities shall provide areas for mixing, equipment storage, decontamination, and personnel amenities as well as systems for spill containment, ventilation, personnel safety, entry control, and run-off retention (40 CFR 165).

G. Responsibility for Compliance

- Directorate of Engineering and Housing will prepare a pest management plan, supervise and direct pest management operations, conduct preventive maintenance and surveillance inspections, ensure that operating personnel are adequately trained, maintain supplies of pesticides and related equipment, and assure that all pest management operations are done safely. In addition, the Facilities Engineer will decide which activities should be contracted out, perform all recordkeeping and reporting requirements of AR 420-76, notify heads of nonappropriated funds activities that restricted and controlled pesticides must be applied by under supervision of certified personnel, and cooperate with medical authority.
- Preventive Medicine will survey pest population involved in health of the command and report the results to the facilities engineer; conduct the installation pesticide monitoring program; obtain timely identification and susceptibility of pests to pesticides as necessary and report to the facilities engineer; establish health and personnel safety criteria for pesticide operation; provide certification training; and assist the MACOM pest management consultant in conducting an on-site installation pest management program review.
- Installation Pest Management Coordinator will be a pest management supervisor or professional pest management personnel, and will develop and monitor the installation pest management annual work plan, and coordinate with activities conducting pest surveillance or applying pesticides to ensure that all applicable information is reported per AR 420-76.

H. Key Compliance Definitions

These definitions were obtained from Federal, DoD, and U.S. Army regulations previously cited in this protocol.

- *Acute LD₅₀* - means a statistically derived estimate of the concentration of a substance that would cause 50 percent mortality to the test population under specified conditions.

- ***Agricultural Commodity*** - any plant, or part thereof, or animal, or animal product, produced by a person (including farmers, ranchers, vineyardists, plant propagators, Christmas tree growers, aquaculturists, floriculturists, orchardists, foresters, or other comparable persons) primarily for sale, consumption, propagation, or other use by man or animals.
- ***Caution*** - the human hazard signal word required on the front panel of a pesticide container determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category III or IV must bear on the front panel the signal word "Caution" (see definition of Toxicity Category).
- ***Commercial Applicator*** - a certified applicator, other than a private applicator, who uses or supervises the use of any pesticide, for any purpose, on any property, or performs other pest control related activities.
- ***Danger*** - the human hazard signal word required on the front panel of a pesticide container determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category I must bear on the front panel the signal word "Danger" (see definition of Toxicity Category).
- ***Fumigant*** - any pesticide which by itself or in combination with any other substance emits or liberates a gas, gases, fumes, or vapors, and which gas, gases, fumes, or vapors when liberated and used will destroy, control, or mitigate a pest, and is usually lethal, poisonous, noxious, or dangerous to human life.
- ***Good Management Practice (GMP)*** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- ***Imminent Hazard*** - a situation that exists when the continued use of a pesticide during the time required for cancellation proceedings would be likely to result in unreasonable adverse effects on the environment or will involve unreasonable hazard to the survival of a species declared endangered by the Secretary of the Interior under P. L. 91-135.
- ***MSDS (Material Safety Data Sheets)*** - a form that contains identification, handling, and hazard disclosure information on over 75,000 chemical substances that require documentation by chemical manufacturers under the Hazard Communication and Labeling Standard of the OSHA. For each chemical, the MSDS provides substance identification, including chemical name, trade names, and molecular formula; manufacturer's or importer's name, address, and telephone number; physical data, including description, boiling and melting points, specific gravity, evaporation rate, and solubility in water; fire and explosion data, including flash point, upper and lower ignition limits, and fire-fighting techniques; toxicity and health effects, including first aid and antidotes; reactivity, including incompatibilities (i.e., explosive reaction with hydrogen

peroxide), decomposition, and polymerization; handling, storage, or disposal conditions to avoid; and spill and leak procedures, including requirements for protective equipment.

- ***Pesticide*** - any substance or mixture of substances, including biological control agents, that prevent, destroy, repel, or mitigate pests; also any substance or mixture of substances used as a plant regulator, defoliant, or disinfectant; and is further categorized into the following:
 - "Excess pesticides" means all pesticides that cannot be legally sold pursuant to the Act or that are to be discarded.
 - "Organic pesticides" means carbon-containing substances used as pesticides, excluding metallo-organic compounds.
 - "Inorganic pesticides" means noncarbon-containing substances used as pesticides.
 - "Metallo-organic pesticides" means a class of organic pesticides containing one or more metal or metalloid atoms in the structure.
- ***Pesticide Product*** - means a pesticide in the particular form (including composition, packaging, and labeling) in which the pesticide is, or is intended to be, distributed or sold. This includes any physical apparatus used to deliver or apply the pesticide if distributed or sold with the pesticide.
- ***Pest Management Personnel (PMP)*** - military officers commissioned in the Medical Services or DoD civilian personnel with college degrees in biological or agricultural sciences who are in a current assignment that includes pest management responsibilities exercised regularly. DoD civilian employees shall also meet appropriate Office of Personnel Management qualification Standards.
- ***Private Applicator*** - a certified applicator who uses or supervises the use of any pesticide which is classified for restricted use for purposes of producing any agriculture commodity on property owned or rented by him or his employer or (if applied without compensation other than trading of personal services between producers of agricultural commodities) on the property of another person.
- ***Restricted Use Pesticides*** - pesticides designated for restricted use under the provisions of Section 3 (d)(1)(c) of FIFRA. These pesticides are only to be used by certified applicators or by persons working under their supervision (40 CFR 162.30). Restricted use pesticides are identified on the label.

- ***Toxicity Category*** - required warnings and precautionary statements are based on the Toxicity Category of the pesticide. The category is assigned on the basis of the highest hazard shown in the table listed in 40 CFR 162.10.
- ***Warning*** - the human hazard signal word required on the front panel of a pesticide container determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category II shall bear on the front panel the signal word "Warning" (see 40 CFR 162.10 for listing of indicators necessary to meet specific criteria of toxicity categories).

FEDERAL INSECTICIDE, FUNGICIDE, AND RODENTICIDE ACT

GUIDANCE FOR WORKSHEET USERS

| | REFER TO WORKSHEET ITEMS | CONTACT THESE PERSONS OR GROUPS: (a) |
|---|-----------------------------|---|
| All facilities | 9-1 through 9-3 | (2)(16)(17)(22)(33) |
| If facility is not responsible for pesticide application | 9-4 | (17)(33) |
| If facility personnel engage in application of pesticides | 9-5 through 9-16 | (2)(3)(16)(17)(33) |
| If facility stores, mixes, or prepares pesticides | 9-17 through 9-20 | (16)(17)(33) |
| If facility stores, mixes, or prepares pesticides that bear "warning" or higher toxicity symbols | 9-21 through 9-30 | (5)(17)(33) |
| If facility disposes of pesticide wastes | 9-31 through 9-33 | (17)(33) |

(a) CONTACT/LOCATION CODE:

- (2) Environmental Coordinator (BC)
- (3) Preventive Medicine Officer
- (5) Fire Department
- (16) Building and Grounds Division (DEH)
- (17) Entomology Shop (DEH)
- (22) Staff Judge Advocate
- (33) Golf Course Pesticide Shop

FEDERAL INSECTICIDE, FUNGICIDE, AND RODENTICIDE ACT

Records to Review:

- Records of pesticides purchased by the facility (purchase orders, inventory)
- Pesticide application records
- Description of the facility's pest control program
- Installation pest management plan
- Certification status of pesticide applicators
- Pesticide disposal manifests
- Any emergency exemption granted to the Federal agency by the USEPA
- Contracts for pest management
- Recent ventilation rating for pesticide fume hood and pesticide mixing/storage rooms
- Staffing requirements for pest management program

Physical Features to Inspect:

- Personnel protection equipment
- Pesticide application equipment
- Pesticide storage areas, including storage containers
- Military unit storage/supply areas
- DEH/DOL supply and storage areas
- Field sanitation training sites

People to Interview:

- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Fire Department
- Building and Grounds Division (DEH)
- Entomology Shop (DEH)
- Staff Judge Advocate
- Golf Course Pesticide Shop
- Pest Management Program Coordinator/Officer
- DEH/DOL supply and storage areas
- Military Unit Supply Officer
- Supply and Storage Officer (DOL)

Section 10

NATIONAL HISTORIC PRESERVATION ACT (NHPA)

AND

CULTURAL RESOURCES

SECTION 10

NATIONAL HISTORIC PRESERVATION ACT (NHPA) AND CULTURAL RESOURCES

A. Applicability of this Protocol

This protocol applies to all Army installations with improved, semi-improved and unimproved grounds. Plans and programs for protection and management of cultural resources, which include historic and prehistoric properties, are included in this protocol.

This protocol integrates the requirements of all Federal, state, and local laws and regulations into a single document that applies to all installations with potential for historical or culturally significant sites.

B. Federal Regulations

- Antiquities Act of 1906 (Public Law 59-209; 16 USC 431-433) provides for the protection of historic and prehistoric ruins and objects of antiquity on Federal lands, and authorizes scientific investigation of antiquities on Federal lands, subject to permits and other regulatory requirements. Paleontological resources are covered by this Act. 43 CFR 3 implements the Antiquities Act of 1906.
- Historic Sites Act of 1935 (Public Law 74-292; 16 USC 470-470w-6) authorizes the designation of national historic sites and landmarks, authorizes interagency efforts to preserve historic resources, and establishes a maximum fine of \$500 for violations of the Act. Implementing regulations are 36 CFR 62 and 65 - *National Historic Landmarks* and 36 CFR 68 - *Standards for Historic Preservation*.
- National Historic Preservation Act of 1966, as amended (Public Law 89-665; 16 USC 470-470w-6) establishes historic preservation as a national policy and defines it as the protection, rehabilitation, restoration, and reconstruction of districts, sites, buildings, structures, and objects significant in American history, architecture, archaeology, or engineering. Amendments of 1980 establish guidelines for nationally significant properties, curation of artifacts, and data documentation of historic properties, and preservation of Federally owned historic sites; require designation of a Federal Historic Preservation Officer in each Federal agency; authorize the inclusion of historic preservation costs in project planning costs; and authorize the withholding of sensitive data on historic properties when necessary. Section 106 provides direction for Federal agencies for

undertakings that affect properties listed, or eligible for listing, on the National Register and is implemented by regulations (36 CFR 800) issued by the Advisory Council. Section 110 requires Federal agencies to locate, inventory, and nominate all properties that may qualify for the National Register. Applicable regulations are 36 CFR 60, *National Register of Historic Places*, 36 CFR 63, *Determination for Eligibility for Inclusion in the National Register of Historic Places*, and 36 CFR 800, *Protection of Historic Properties (Advisory Council on Historic Preservation)*. 36 CFR 78 provides a waiver of responsibility for Federal agencies of the requirements of the National Historic Preservation Act of 1966 in the event of a major natural disaster or imminent threat to national security.

- National Environmental Policy Act (NEPA) of 1969 (Public Law 91-190; 42 USC 4321-4347) states the policy of the Federal government to preserve important historic, cultural, and natural aspects of our national heritage and requires consideration of environmental concerns during project planning and execution. This act requires Federal agencies to prepare an Environmental Impact Statement (EIS) for every major Federal action that affects the quality of the human environment, including both natural and cultural resources. It is implemented by regulations issued by the Council on Environmental Quality (40 CFR Parts 1500-08) which are incorporated into AR 200-2, *Environmental Effects of Army Actions*. (See NEPA, Section 12 of this manual, for regulations pertaining to the EIS process.)
- Executive Order 11593, *Protection and Enhancement of the Cultural Environment*, May 13, 1971 (reprinted as a note at 16 USC 470) directs Federal agencies to provide leadership in preserving, restoring, and maintaining the historic and cultural environment of the Nation; to ensure the preservation of cultural resources; to locate, inventory, and nominate to the National Register all properties under their control that meet the criteria for nomination; and to ensure that cultural resources are not inadvertently damaged, destroyed, or transferred before the completion of inventories and evaluation for the National Register.
- Archaeological and Historic Preservation Act of 1974 (Public Law 93-291; 16 USC 469-469c) directs Federal agencies to notify the Secretary of the Interior when they find that any Federal construction project or Federally licensed activity or program may cause irreparable loss or destruction of significant scientific, prehistoric, historical, or archaeological data. It also provides for funding historical and archaeological protection for such projects.
- Public Buildings Cooperative Use Act of 1976 (Public Law 94-541; 40 USC 490, 601a, 606, 611, and 612a) encourages adaptive reuse of historical buildings as administrative facilities for Federal agencies or activities.

- American Indian Religious Freedom Act of 1978 (Public Law 95-341; 42 USC 1996) states the policy of the United States to protect and preserve for American Indians their inherent rights of freedom to believe, express, and exercise the traditional religions of the American Indian, Eskimo, Aleut, and native Hawaiians. These rights include, but are not limited to, access to sites, use and possession of sacred objects, and the freedom to worship through ceremony and traditional rites.
- Native American Graves Protection and Repatriation Act (P.L. 101-601), requires Federal agencies to establish procedures for identifying Native American groups associated with cultural items on Federal lands, to inventory human remains and associated funerary objects in Federal possession, and to return such items upon request to the affiliated groups. The law also requires that any discoveries of cultural items covered by the Act shall be reported to the head of the Federal entity who shall notify the appropriate Native American tribe or organization and cease activity in the area of the discovery for at least 30 days.
- Archaeological Resources Protection Act (ARPA) of 1979 (Public Law 96-95; 16 USC 470aa-11) prohibits the removal, sale, receipt, and interstate transportation of archaeological resources obtained illegally (without permits) from public or Indian lands and authorizes agency permit procedures for investigations of archaeological resources on public lands under the agency's control. Public Law 100-555 amends ARPA by addition of Section 14, which states that the Secretaries of the Interior, Agriculture, and Defense (and their respective employees and agents) shall develop plans for surveying the lands under their control to determine the nature and extent of archaeological resources and prepare a schedule for surveying those lands that are likely to contain the most scientifically valuable archaeological resources and develop documents for reporting suspected violations of ARPA. The protection of Archaeological Resources, and Uniform Regulations 18 CFR 1312, 32 CFR 229, 36 CFR 296, and 43 CFR 7, implement the Archaeological Resources Protection Act (ARPA).

C. State/Local Requirements

Army policy is to cooperate with the states to the maximum extent possible.

- The State Historic Preservation Officer (SHPO) is largely responsible for implementation of the National Historic Preservation Act. The SHPO is a consulting party to Federal undertakings reviewed in accordance with the National Historic Preservation Act. The SHPO must be provided an opportunity to comment on all installation undertakings that may have an effect on significant historic properties.

In all cases, the most stringent regulations should be followed.

D. DoD Regulations

- DoD Directive 4710.1, *Archaeological and Historic Resources Management*, 21 June 1984, provides policy, prescribes procedures, and assigns responsibilities for the management of archaeological and historic resources located in and on waters and lands under DoD control. It establishes the policy that DoD components will integrate the archaeological and historical preservation requirements of applicable laws with the planning and management of activities under DoD control.

E. U.S. Army Regulations

- Army Regulation (AR) 420-40, *Historic Preservation*, provides policy and regulatory guidance on historic preservation. It establishes the Army's goals to protect buildings, structures, sites, and objects of historical, architectural, archaeological, or cultural value located on Army-controlled property, as required by NHPA, ARPA, and other laws. It contains definitions of pertinent terms, and descriptions of compliance procedures.

F. Key Compliance Requirements

- Historic Preservation - Army installations are required to protect, restore, and maintain culturally significant properties and to locate, inventory, and nominate to the Secretary of the Interior all properties under their ownership or control that appear to qualify for listing on the National Register of Historic Places. They must consider effects of their actions on eligible properties and consult with the SHPO and Advisory Council. Installations with such properties must also develop a historic preservation plan that ensures compliance with these responsibilities.
- Archaeological Resources - Army installations must protect all archaeological resources. No archaeological resource on Federal land, including arrowheads, pottery, dwellings, and other artifacts, can be removed, excavated, damaged, or disturbed without an archaeological permit.
- Native American Rights - Army installations must recognize the rights of Native Americans to have access to sites and objects of religious significance and to practice traditional religious ceremonies and rites. Native American groups

also have the right to the return of cultural items found on Federal property, or maintained by Federal agencies. They also must be notified in the event of any discoveries of such cultural items.

G. Responsibility for Compliance

- Installation Commander is responsible for funding historic preservation programs through the Command Operating Budget (COB).
- Directorate Engineering and Housing (DEH) is responsible for supervising, controlling, and managing installation historic preservation programs.
- Installation Historic Preservation Officer (IHPO) is responsible for implementing the historic preservation program, training installation personnel, and locating, inventorying, and evaluating installation cultural resources. IHPO negotiates Memoranda of Agreement with State Historical Preservation Officer, which contain detailed descriptions ("programmatics") of specific preservation actions, and ensures that all provisions of the agreement are met.

H. Key Compliances

These definitions were obtained from regulations cited previously in this protocol.

- *Action* - all activities, undertakings, or programs of any kind authorized, funded, or carried out, in whole or in part, by Federal agencies in the United States or upon the high seas. Examples include, but are not limited to:
 - (a) actions intended to conserve listed species or their habitat
 - (b) the promulgation of regulations
 - (c) the granting of licenses, contracts, leases, easements, rights-of-way, permits, or
 - (d) grants-in-aid
 - (e) actions directly or indirectly causing modifications to the land, water, or air.
- *Action Area* - all areas to be affected directly or indirectly by the Federal action and not merely the immediate area involved in the action.
- *Adverse Effect* - changes that diminish those attributes of a property that qualify it for the National Register of Historic Places.

- *Advisory Council on Historic Preservation (ACHP) (Advisory Council)* - the Council established by Title II of the National Historic Preservation Act to advise the President and Congress, to encourage private and public interest in historic preservation, and to comment on Federal agency action under Section 106 of the National Historic Preservation Act.
- *Archeological Interest* - capable of providing scientific or humanistic understandings of past human behavior, cultural adaptation, and related topics through the application of scientific or scholarly techniques.
- *Archaeological Permit* - a legal authorization required by the Archaeological Resources Protection Act to conduct an archaeological survey or investigation that involves surface collecting or subsurface testing on Federal land. (Army contracts for archaeological work that meet the requirements of the Archaeological Resources Protection Act can serve in lieu of permits under the Act.)
- *Archaeological Resource* - any material remains of human life or activities which are at least 100 years of age, and which are of archeological interest.
- *Area of Potential Effect* - the geographical area or area within which an undertaking may cause changes in the character or use of historic properties.
- *Assessment of Effect* - a process to determine whether an undertaking may affect in any way the qualities of a property that make it eligible for the National Register. The assessment is made by the installation commander in consultation with the SHPO. Also, see *Determination of Effect* below.
- *Building* - a structure created to shelter any form of human activity, such as a house, barn, church, hotel, or similar structure. Building may refer to a historically related complex such as a courthouse and jail, or a house and barn.
- *Consultation* - a process initiated by the installation commander wherein the commander confers with the SHPO to seek ways to reduce or avoid adverse effects on historic properties. The Advisory Council and certain interested persons may participate as consulting parties.
- *Determination of Effect* - the process whereby actions or undertakings are assessed for their potential effect on cultural resources. These effects should always be determined in consultation with relevant authorities (e.g., the SHPO), and the cultural values of the community that ascribes cultural significance to a resource should always be considered. With respect to historic properties, the ACHP Criteria of Effect and Adverse Effect (36 CFR 800.9) must be applied, in consultation with the SHPO.

- ***Determination of Eligibility*** - a process to determine if a property is eligible for listing on the National Register of Historic Places. Ten- or 45-day determinations may be rendered so that project and program decisions may proceed quickly. If a property is determined eligible, it is treated as if it were on the National Register, pending completion of the nomination procedure.
- ***District*** - a geographically definable area, urban or rural, that possesses a significant concentration, linkage or continuity of sites, structures, buildings, or objects united by past events or aesthetically by plan or physical development. A district may also comprise individual elements separated geographically but linked by association or history.
- ***Effect*** - any condition of a project or undertaking that may cause any change in the quality of the historical, architectural, archaeological, or cultural character of a property that qualifies for the National Register. An undertaking is considered to have an effect when any aspect of the undertaking changes the integrity of location, design, setting, materials, workmanship, feeling, or association of the property that contributes to its significance according to the National Register criteria. Direct effects are caused by the undertaking and occur at the place and time of the undertaking. Indirect effects are those caused by the undertaking that are later in time or further removed in distance, but are still reasonably foreseeable.
- ***Endangered Property*** - a historic property which is or is about to be subjected to a major impact that will destroy or seriously damage the qualities of significance that make it eligible for National Historic Landmark or National Register of Historic Places designation.
- ***Federal Historic Preservation Officer*** - the person who is responsible for coordinating the agency's activities under the National Historic Preservation Act and Executive Order 11593, including nominating properties under the agency's ownership or control to the National Register.
- ***Historic Preservation*** - identification, evaluation, documentation, curation, acquisition, protection, rehabilitation, restoration, management, stabilization, maintenance, recording, and reconstruction of cultural resources, and any combination of the foregoing.
- ***Historic Property or Resource*** - physical remains of any prehistoric or historic district, site, building, structure, or object significant in American history, architecture, archaeology, engineering, or culture and included on, or eligible for, the National Register. The term includes artifacts, records, and remains that are related to such a district, site, building, structure, or object.

- **Indian Lands** - lands of Indian tribes, or Indian individuals, which are either held in trust by the United States or subject to a restriction against alienation imposed by the United States, except for subsurface interests not owned or controlled by an Indian tribe or Indian individual.
- **Inventory** - to determine the location of cultural resources that may have National, state, or local significance.
- **Landmark** - a National Historic Landmark and a district, site, building, structure, or object, in public or private ownership, judged by the Secretary to possess national significance in American history, archaeology, architecture, engineering, and culture, and so designated by him.
- **Material Remains** - physical evidence of human habitation, occupation, use, or activity, including the site, location, or context in which such evidence is situated. The following classes of materials remains, if they are at least 100 years old, will be considered archeological resources:
 - (a) surface or subsurface structures, shelters, facilities, or features
 - (b) surface or subsurface artifact concentrations or scatters
 - (c) whole or fragmentary tools, implements, containers, weapons and weapon projectiles, clothing, and ornaments
 - (d) by-products, waste products, or debris resulting from manufacture or use of human-made or natural materials
 - (e) organic waste
 - (f) human remains
 - (g) rock carvings, rock paintings, and intaglios and other works of artistic or symbolic representation
 - (h) rockshelters and caves or portions thereof containing material remains
 - (i) all portions of shipwrecks or
 - (j) any portion or piece of any of the foregoing.
- **MOA (Memorandum of Agreements)** - the documentation of mutually agreed to statements of facts, intentions, procedures, and parameters for future actions and matters of coordination.
- **MOU (Memorandum of Understanding)** - Memorandums of Understanding are used for the documentation of mutually agreed parameters within which inter-service, interdepartmental/agency and/or intraservice support agreements will be developed.
- **Mitigation** - lessening of the adverse effects an undertaking may cause to properties on, or eligible for, the National Register. Mitigation can include:
 - (a) limiting the magnitude of the action

- (b) repairing, rehabilitating, or restoring the effected property
 - (c) recovering and recording data from cultural properties that may be destroyed or substantially altered
 - (d) avoiding the effect altogether by not taking an action, or part of an action, or by relocating the action
 - (e) reducing or eliminating the effect over time by preservation and maintenance operations during the life of the action
 - (f) compensating for effect by providing substitute resources or environments.
- ***National Historic Landmarks Program*** - the program which identifies, designates, recognizes, lists, and monitors National Historic Landmarks conducted by the Secretary through the National Park Service.
 - ***National Register of Historic Places (National Register)*** - the listing of districts, sites, buildings, structures, and objects of national, state, or local significance in American history, architecture, archaeology, or culture that is maintained by the Secretary of the Interior (Keeper of the Register).
 - ***Preservation*** - the act or process of applying measures to sustain the existing form, integrity, and material of a building or structure, and the existing form and vegetative cover of a site. It may include initial stabilization work where necessary, as well as ongoing maintenance of the historic building materials.
 - ***Property*** - a site, building, object, structure, or a collection of such items that forms a district.
 - ***Protection*** - the act or process of applying measures designed to affect the physical condition of a property by defending or guarding it from deterioration, loss, attack or alteration, or to cover or shield the property from danger or injury. In the case of buildings and structures, such treatment is generally temporary and anticipates future historic preservation treatment; in the case of archaeological sites, the protective measure may be temporary or permanent.
 - ***Reconstruction*** - the act or process of reproducing by new construction the exact form and detail of a vanished building, structure, or object, or a part thereof, as it appeared at a specific time.
 - ***Rehabilitation*** - the act or process of returning a property to a state of utility to repair or alteration that makes possible an efficient contemporary use while preserving those portions or features of the property that are significant to its historical, architectural, and cultural values.
 - ***Restoration*** - the act or process of accurately recovering the form and details of property and its setting as it appeared at a particular period of time by means of the removal of later work or by the replacement of missing earlier work.

- *Section 106 Consultation* - a compliance procedure in which an agency requests the comments of the SHPO and/or the Advisory Council on Historic Preservation when an undertaking may affect a property on, or eligible for, the National Register.
- *Significant* - having a characteristic that makes a property eligible for listing on the National Register.
- *State Historic Preservation Officer (SHPO)* - the official, appointed pursuant to USC 470a(b)(1), who is responsible for administering the National Historic Preservation Act within a state or jurisdiction.
- *Undertaking* - any project, activity, or program that can result in changes in the character or use of cultural resources, if any such resources are located in the area of potential effects or otherwise subject to effect by the action.

NATIONAL HISTORIC PRESERVATION ACT (NHPA) AND CULTURAL RESOURCES

Records to Review:

- For construction (including maintenance, demolition, rehabilitation, etc.) activities: documentation of finding of no adverse effect, finding of adverse effect, or Memorandum of Agreement with the SHPO, or requests for comment when there is no agreement on historic properties.
- Installation Master Plan
- Historic Preservation Plan
- Nominations to National Register
- Correspondence with SHPO for consensus determinations of eligibility; determinations of no effect, effect, no adverse effect, and adverse effect.
- Standing Operating Procedures for ensuring compliance
- Memoranda of Agreement and Programmatic Memoranda
- ARPA permits
- Curation inventories and bailment agreements
- Archaeological site forms and maps
- NEPA mitigation plans
- Cultural resources reports, contracts, and scopes of work

Physical Features to Inspect:

- Sites of historic, archaeological, or Native American interest (designation, protection, and interpretation)
- Repositories of archaeological records and collections
- Buildings and structures of potential historical significance (National, state, or local)

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Installation Historic Preservation Officer (IHPO)
- Environmental Coordinator/ Officer (EC)
- Director of Plans, Training, Mobilization, and Security (DPTMSEC)
- Public Affairs Office (PAO)
- Staff Judge Advocate
- Master Planner
- Museum Curator
- Historian

Section 11

ENDANGERED SPECIES ACT (ESA)

AND

NATURAL RESOURCES

SECTION 11

ENDANGERED SPECIES ACT (ESA) AND NATURAL RESOURCES

A. Applicability of this Protocol

This protocol applies to all Army installations with improved, semi-improved and unimproved grounds. Plans and programs for protection, enhancement, and management of natural resources such as plants and wildlife, and their habitats, are included in this protocol.

B. Federal Legislation

- The Endangered Species Act of 1973, Public Law 93-205, as amended, requires the Army to carry out programs to protect and conserve Federally listed endangered and threatened plants and wildlife. Such programs must be developed and carried out with consultation and assistance from the Departments of Interior and Commerce and the proper state agencies. All Army actions authorized, funded, or carried out must not jeopardize the continued existence of endangered or threatened plants and wildlife, nor result in the destruction or adverse modification of critical habitat. Any Army action that may affect Federally listed species or their critical habitats requires consultation with the U.S. Fish and Wildlife Service (USFWS). 50 CFR 402 and 50 CFR 17 interpret and implement the Endangered Species Act.
- The Sikes Act (16 USC 670a-670f) addresses fish and wildlife conservation and requires installations to execute cooperative plans with the USFWS and state for managing fish and wildlife. It allows installations to charge fees for hunting and fishing permits, and requires that they be used for fish and wildlife conservation on the installation.
- The Fish and Wildlife Conservation Act of 1980 (Public Law 96-366; 16 USC 2901 et seq) promotes state programs for the purpose of conserving, restoring, or otherwise benefiting nongame fish and wildlife, their habitats, and their uses.
- Public Law 86-337 (10 U.S.C. 2671) requires that all hunting, fishing, and trapping on military installations be in accordance with the fish and game laws of the state in which it is located, and that appropriate state licenses for these activities on the installation be obtained.
- 10 USC 2665 provides for sales of forest products on Army installations. Funds generated by these sales are used to reimburse the forest management expenses,

pay state entitlements (40 percent of installation net proceeds go to state for county roads and schools). The Army-wide net reserve at the end of the fiscal year, after states' entitlements are paid, goes to the DoD Natural Resources Reserve Account from which it is dispersed, DoD-wide, to cover otherwise unfunded forestry expenses and natural resource projects.

- The Wild and Scenic Rivers Act of 1968 (30 CFR 297) prohibits the use of Federal funds for activities that would have an adverse affect on those characteristics that caused a river to be classified as wild, scenic, or recreational.
- The Farmland Protection Policy Act of 1981 (7 CFR 658) minimizes the extent to which Federal programs contribute to the unnecessary conversion of farmland to nonagricultural use. Installation lands, when suitable and available, may be leased for cropland or grazing. 10 USC 2667 provides for the use of the funds generated by these leases for the administrative costs of the leases, as well as the financing of multiple-use land management programs at the installation.
- Executive Orders 11988, *Floodplain Management*, and 11990, *Protection of Wetlands*, address the actions Federal agencies must take to
 - (a) identify and protect wetlands and floodplains,
 - (b) minimize the risk of flood loss and destruction of wetlands, and
 - (c) preserve and enhance the natural and beneficial values of both floodplains and wetlands.
- National Environmental Policy Act (NEPA) of 1969 (Public Law 91-190; 42 USC 4321-4347) states the policy of the Federal government to preserve important historic, cultural, and natural aspects of our national heritage and requires consideration of environmental concerns during project planning and execution. This act requires Federal agencies to prepare an Environmental Impact Statement (EIS) for every major Federal action that affects the quality of the human environment, including both natural and cultural resources. It is implemented by regulations issued by the Council on Environmental Quality (CEQ) (40 CFR Parts 1500-08) which are incorporated into AR 200-2, *Environmental Effects of Army Actions*. (See *Environmental Program Management*, Section 16 of this manual, for regulations pertaining to the EIS process.)

C. State/Local Requirements

Army policy is to cooperate with the states to the maximum extent possible.

States develop regulations and good management practices (GMPs) for the protection of surface waters and prevention of nonpoint source pollution. These GMPs primarily apply to agricultural and silvicultural (forestry) activities, but

are also to be followed whenever any activity may affect surface waters or contribute to nonpoint source pollution. Army management plans address these GMPs.

States establish regulations governing hunting and fishing activities. These regulations must be followed on Army installations. Special regulations for these activities on installations may be developed in cooperation with the state wildlife management agency.

The Fish and Wildlife Conservation Act gives implementing authority to the state.

D. DoD Regulations

- DoD Directive 4700.4, *Natural Resources--Conservation and Management*, 29 January 89, prescribes DoD policies and establishes an integrated program for multiple-use management of the renewable natural resources on DoD lands. It directs installations to protect, conserve, and manage the watersheds and natural landscapes, the soil, the forest and timber growth, the fish and wildlife, and endangered species as vital elements of the Army mission. It further stipulates that the natural resources will be used and cared for in the combination best serving the present and future needs of the United States and its people.
- DoD Instruction 7310.5, *Accounting for Production and Sale of Forest Products*, 25 January 1988, provides policy on DoD forestry accounting procedures.

E. U.S. Army Regulations

- Army Regulation (AR) 420-74, *Natural Resources--Land, Forest, and Wildlife Management*, provides Army policy for managing natural resources and attaining the goal of ensuring that Army actions are not likely to jeopardize the continued existence of endangered or threatened species or result in the destruction or adverse modification of the critical habitat of such species.

F. Key Compliance Requirements

- Management Plans - Army installations which have land and water areas that possess, or are capable of producing, natural resources will develop a program for restoring, improving, developing, and conserving natural resources. They will develop natural resource management plans for land (soil and water), grazing and cropland, forest, fish and wildlife, and outdoor recreation, where there are resources to manage. The plan is in parts (Part 1: General; Part 2: Land

Management and Grounds Maintenance Plan; Part 3: Forest Management; Part 4: Fish and Wildlife Management; and Part 5: Outdoor Recreation) as required.

- Cooperative Agreements - Installations will maintain liaison with agencies through cooperative agreements. These agreements assist in developing and implementing well-coordinated, multiple-use natural resources programs.
- Cooperative Plans - Agreement of state and U.S. Fish and Wildlife Service on Part 4 of Plans.
- Endangered and Threatened Species - Army installations must carry out programs to conserve endangered and threatened species and, in consultation with the USFWS, must ensure that their actions do not jeopardize the continued existence of such species or destroy or adversely modify critical habitat.
- Natural Resources Report; Defense Environmental Management Information System - Army installations are required by the Sikes Act (16 U.S.C. 670) to prepare an annual report on their natural resources activities. It includes information on all natural resources activities, including outdoor recreation, forestry, and fish and wildlife conservation.
- Wetlands and Floodplains - Army installations must identify all floodplains and wetlands in the installation land management plan and ensure the plan provides for protecting and managing these areas.

G. Responsibility for Compliance

- Department of Engineering and Housing (DEH) is responsible for funding, supervising, controlling, and managing installation natural resources, including plant and animal species.
- Natural Resources Manager is responsible for preparing management plans and cooperative agreements, budgets, and the annual natural resources report. The natural resources manager also implements and controls all activities in furtherance of natural resources management. On installations without a full-time Natural Resources Manager, these duties would normally be assigned to the environmental coordinator or community planner.

H. Key Compliance Definitions

These definitions were obtained from regulations cited previously in this protocol.

- **Action** - means all activities or programs of any kind authorized, funded, or carried out, in whole or in part, by Federal agencies in the United States or upon the high seas. Examples include, but are not limited to:
 - (a) actions intended to conserve listed species or their habitat
 - (b) the promulgation of regulations
 - (c) the granting of licenses, contracts, leases, easements, rights-of-way, permits
 - (d) grants-in-aid
 - (e) actions directly or indirectly causing modifications to the land, water, or air.
- **Action Area** - means all areas to be affected directly or indirectly by the Federal action and not merely the immediate area involved in the action.
- **Adverse Affect** - changes that diminish those attributes of a property that qualify it for the National Register of Historic Places.
- **Conservation** - wise management and use of natural resources to provide the best public benefits for present and future generations.
- **Destruction or Adverse Modification** - means a direct or indirect alteration that appreciably diminishes the value of critical habitat for both the survival and recovery of a listed species. Such alterations include, but are not limited to, alterations adversely modifying any of those physical or biological features that were the basis for determining the habitat to be critical.
- **District** - a geographically definable area, urban or rural, that possesses a significant concentration, linkage, or continuity of sites, structures, buildings, or objects united by past events or aesthetically by plan or physical development. A district may also comprise individual elements separated geographically but linked by association or history.
- **Fish and Wildlife Cooperative Plan** - the component of the Natural Resources Management Plan (Part 4) that describes how fish and wildlife resources at an installation will be managed and that has the agreement of the installation commander, U.S. Fish and Wildlife Service, and appropriate state agency.
- **Floodplain** - the 100-year floodplain is the lowland area adjoining inland and coastal waters, including flood prone areas of offshore islands, that would be inundated by the base (100-year) flood. The critical actions (or 500-year) floodplain is the area that would be inundated by a 500-year flood.
- **Good Management Practice (GMP)** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.

- *Jeopardize the Continued Existence of* - means to engage in an action that reasonably would be expected, directly or indirectly, to reduce appreciably the likelihood of both the survival and recovery of a listed species in the wild by reducing the genetic diversity, reproduction, numbers, or distribution of that species.
- *MOA (Memorandum of Agreements)* - the documentation of mutually agreed upon statements of facts, intentions, procedures, and parameters for future actions and matters of coordination.
- *MOU (Memorandum of Understanding)* - Memorandums of Understanding are used to document mutually agreed upon parameters within which interservice, interdepartmental/agency, and/or intraservice support agreements will be developed.
- *Multiple-Use* - the integrated, coordinated, and compatible use of various natural resources to derive the best benefit while perpetuating and protecting those resources.
- *Natural Resources Management* - action taken to manipulate, alter, or manage environmental, human, and natural resources in harmony with each other to meet present and future needs.
- *Negligible Impact* - an impact that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.
- *Nonpoint Source Pollution* - a diffuse source of water pollution that does not discharge through a pipe, such as runoff from construction activities and agricultural, silvicultural (forestry), and urban areas.
- *Sustained Yield* - production of renewable natural resources at a level where the productive capacity of the resource is not reduced. Sustained yield management provides an annual or periodic yield and perpetuation of the managed resource.
- *Wetlands* - areas that possess three essential characteristics: (1) hydrophytic vegetation; (2) hydric soils; and (3) wetland hydrology.

ENDANGERED SPECIES ACT (ESA) AND NATURAL RESOURCES

Records to Review:

- Environmental Review Documents
- Installation Master Plan
- Natural Resources Management Plan (Parts 1 through 5, as appropriate)
- Fish and Wildlife Cooperative Plan, and consultations
- Fish and Wildlife Cooperative Agreement
- Outdoor Recreation Plan
- Outdoor Recreation Cooperative Agreement
- Grounds Maintenance Contracts
- Agricultural and Grazing Lease Contracts, and Land Use Plans
- Natural Resources Annual Work Plans and Approvals
- Budget Documents (DD 1383 report, Facilities Engineers Annual Work Plan)
- Natural Resources Report, or equivalent
- GOCO Contract
- GOCO Maintenance Plan

Physical Features to Inspect:

- Construction sites (erosion control, runoff, sedimentation, and landscaping)
- Facilities constructed in the past 2 years (erosion and landscaping)
- Wildlife containment areas (condition and management)
- Wildlife habitat and land and water resources (condition and management)
- Equipment that could damage wildlife, its habitat, or land and water resources (use and control)
- Military Training areas (condition)
- Ordnance storage and disposal areas (condition)
- Forest management areas (condition and management)
- Agricultural and grazing lease areas (condition and management)
- Storm water drainage areas and improvements (condition)
- Erosion sites (condition and erosion)

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Chief of Operations and Maintenance (O&M)
- Director of Plans, Training, Mobilization, and Security (DPTMSEC)
- Land Management Officer (DEH)
- Directorate of Personnel and Community Activities (DPCA)

Section 12

NATIONAL ENVIRONMENTAL POLICY ACT

SECTION 12

NATIONAL ENVIRONMENTAL POLICY ACT

A. Applicability of this Protocol

This protocol applies to all Army facilities. It contains procedures and regulations designed to protect and enhance the Nation's environmental resources by incorporating environmental analysis into Army planning and decision-making. These procedures and regulations are derived from the National Environmental Policy Act (NEPA) of 1969 and contained in the Council on Environmental Quality's (CEQ) *Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act*, Department of Defense Directive 6050.1 (*Environmental Effects in the United States of DoD Actions*), AR 200-1 (*Environmental Protection and Enhancement*) and AR 200-2 (*Environmental Effects of Army Actions*).

Specific state regulations are not included in this protocol.

B. Federal Legislation

• National Environmental Policy Act (NEPA)

The National Environmental Policy Act of 1969 (42 USC 4321 et seq., as amended) establishes policy, sets goals, and provides means for carrying out the policy of using all practicable means to promote the general welfare through the Army's considered and intelligent use of the environment. Specifically, NEPA requires Federal agencies to incorporate into their planning and decision-making processes an analysis of the effects (if any) certain proposed actions would have on the environment and the possibilities for mitigating or avoiding completely any adverse environmental effects. To ensure that the proper attention to, and regard for, the environment is undertaken, NEPA contains certain "action-forcing" provisions contained in section 102(2). These provisions include: utilization of systematic and interdisciplinary approaches to environmental issues to ensure that natural and social science methods and considerations are given the same attention as economic and technological considerations; development of methods to quantify and evaluate environmental amenities and values in order to properly compare environmental factors with economic and technological factors when making decisions, and; preparation of an extensive environmental evaluation or "environmental impact statement" for certain Federal actions involving substantial impacts on the environment. This document, the Environmental Impact Statement (EIS), applies to "major Federal

actions significantly affecting the quality of the human environment." It includes the production and analysis of environmental documentation concerning: the environmental effect of the proposed Federal action; any adverse environmental effects that cannot be avoided should the proposal be implemented; alternatives to the proposed action; the relationship between local short-term uses of the environment and the maintenance and enhancement of long-term productivity; and any irreversible and irretrievable commitments of resources that would be involved in the proposed action should it be implemented. The Act also empowers the CEQ to develop procedures Federal agencies must follow in implementing the spirit and letter of the Act.

- **Council on Environmental Quality Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act**

These environmental regulations are promulgated by the CEQ (contained in 40 CFR 1500-1508) and are designed to direct Federal agencies to follow certain requirements to fulfill the mandate of environmental protection set out in NEPA. These regulations: direct Federal agencies to apply the NEPA process early in the agency's planning and decisionmaking processes; describe when and how agencies are to prepare environmental assessments, impact statements, and related environmental documentation; detail the procedures to be used in eliciting and analyzing comments concerning proposed actions that have the potential of affecting the environment; set out procedures for resolving inter-agency disputes; detail procedures for agency decisionmaking; describe other requirements contained in NEPA; and contain a glossary of relevant NEPA and CEQ terms.

- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with all Federal, state, and local environmental regulations. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities it funds meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such regulations. This is to be done in cooperation with the United States Environmental Protection Agency (USEPA) and state, interstate, and local agencies. In addition, the Executive Order requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget and that an annual plan for the control of environmental pollution containing any necessary improvements in the design, construction, management, operation, and maintenance of Federal facilities and activities is prepared. Exemptions from applicable pollution control standards are very limited and can only be had if the President determines that such exemption is necessary either in the interest of national security, or in the paramount interest of the United States.

C. State/Local Requirements

- Reviewers need to inquire about any state or local requirements under the NEPA process.

D. DoD Regulations

- DoD Directive 6050.1 *Environmental Effects in the United States of DoD Actions*, implements the CEQ regulations and provides policy and procedures enabling DoD officials to be informed of, and take into account environmental considerations during the decisionmaking stage of possible major DoD actions in the United States. Specifically, the DoD is charged with ensuring that, consistent with its mission for providing for the national defense: practical means and measures are used to protect, restore, and enhance the quality of the environment; adverse environmental consequences are avoided or minimized; the widest range of beneficial uses of the environment without degradations, risk to health and and safety, or other undesirable consequences are achieved; important historic, cultural, and natural resources are preserved; a balance between resource use and development with the carrying capacity of the ecosystem involved is achieved; the quality of renewable resources is enhanced; and efforts are made to achieve the maximum level of recycling of depletable resources.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, identifies and lists Department of the Army responsibilities, policies, and procedures to preserve, protect, and restore the quality of the environment. This document and AR 200-2, *Environmental Effects of Army Actions*, together establish Army environmental policy.

AR 200-1 contains several citations to NEPA. Section 6-5 outlines environmental documentation requirements and procedures mandated by NEPA and set out in NEPA and AR 200-2 to address environmental issues other than those covered by USEPA/state in the Resource Conservation and Recovery Act (RCRA) permitting process. Section 6-9(a) requires preparation of supporting environmental documents pursuant to NEPA and other laws and regulations for the plans for disposing of chemical warfare agents. Section 9-7(c) requires that all on-the-ground work to carry out the National Contingency Plan (NCP)/RCRA requirements and the IRP (Installation Restoration Program) and FUDS (Formerly Used Defense Sites) projects be conducted per NEPA. In addition, depending on the project and its potential for environmental impact, preparation of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)/Superfund Amendments and Reauthorization Acts

(SARA) support documents will adhere to the environmental documentation requirements in NEPA. Section 10-1(a)(2) cites NEPA as one of the several laws to be used in the asbestos management program. Section 12-2(b) sets out matters to be discussed in the NEPA review of alternative methods. Section 12-5(c) requires the Army proponent in real property transfers and other transactions to ensure that an EBS or PAS (Environmental Baseline Study or, more recently, Preliminary Assessment Screening) is performed.

- Army Regulation (AR) 200-2, *Environmental Effects of Army Actions*, establishes policy, procedures, and responsibilities for assessing the environmental effects of Army actions. It implements the following items: the Council on Environmental Quality's NEPA regulations, EO 12114, *Environmental Effects Abroad of Major Federal Actions* and DoD Directive 6050.1. The NEPA process is developed in this regulation. AR 200-2 states that for the NEPA process to be effective, it must be integrated with other Army project planning at the earliest possible time. This will ensure that Army planning and decisionmaking reflects environmental values; the goals of safeguarding the environment and minimizing adverse environmental effects are achieved; and delays and potential conflicts later in the decisionmaking and implementing processes are avoided. The regulation contains information concerning actions that require environmental evaluation; environmental review categories; determining appropriate environmental documentation; integrating environmental reviews concurrently with other Army planning and decisionmaking actions; identifying mitigation measures and monitoring systems; listing categorical exclusions; describing the environmental assessment and environmental impact statement procedures; and describes the method of obtaining public involvement in the environmental decisionmaking process.

F. Key Compliance Requirements

- AR 200-2 applies to all installations that have proposed actions. It requires installations to perform various environmental surveys and assessments whenever an action is contemplated that could have an effect on the environment.

G. Responsibility for Compliance

Installation, activity, and unit commanders (ICs) will:

- monitor proposed actions and programs within their commands
- task the appropriate component with preparation of environmental assessments (EAs) and environmental impact statements (EISs) and development of public involvement

- assure that appropriate environmental documentation is prepared and forwarded to the proponent
- initiate the preparation of necessary environmental documentation and assess the environmental consequences of proposed programs and projects
- coordinate appropriate environmental documents and public affairs initiatives with Headquarters Department of the Army (HQDA) agencies and the Army Environmental Coordinator
- assist in the review of environmental documents prepared by DoD and other Army or Federal agencies, as requested.

H. Key Compliance Definitions

These definitions were obtained from Army, DoD, and compliance regulations cited previously.

- *Categorical Exclusions (CXs)* - those actions which do not individually or cumulatively have a significant effect on the human environment and for which, therefore, neither an EA nor an EIS is required.
- *Draft Environmental Impact Statement (DEIS)* - a document prepared after the scoping process has been completed. The DEIS is prepared in accordance with the scope decided upon in the scoping process. It is then circulated for comment.
- *Environmental Assessment (EA)* - refers to a concise public document prepared by the installation in order to evaluate a proposed action and its potential effects on the environment. In general, it serves to:
 - briefly provide sufficient evidence and analysis for determining whether to prepare an environmental impact statement, or a finding of no significant impact
 - aid an agency's compliance with the Act when no environmental impact statement is necessary
 - facilitate preparation of a statement when one is necessary.

The EA shall include brief discussions of the need for the proposal, or alternatives, and of the environmental effects of the proposed actions and alternatives, and a listing of the agencies and persons consulted.

- ***Environmental Baseline Study (EBS)*** - pre-1991 document surveying various environmental issues. Specifically, it is a comprehensive evaluation of the existing installation and environmental conditions, particularly regarding hazards and contamination, conducted on proposed real property transactions (Army-controlled or not) and Army-controlled property for which an operating contract, facility contract, or third-party contract is being considered. Its purpose is to determine the Army's potential liabilities associated with the environmental condition of the proposed property transaction; thus allowing the proponent to intelligently decide whether to continue with the action.
- ***Environmental Impact Statement (EIS)*** - a detailed written statement required by NEPA that evaluates the effect of any proposed Federal action on the natural, historic, and cultural environment. It is designed to ensure that NEPA policies and goals are incorporated early into Federal programs, and that the project receives a full, fair, and public discussion.
- ***Environmental Planning Guide (Optional)*** - a document prepared before or at the outset of a major program concept exploration. Its use is optional but encouraged. A concise document intended for use by the program planners and designers, it provides guidelines and supporting rationale by which planners and designers could prevent, avoid, or minimize adverse environmental effect through environmentally sensitive design and planning. It can be made to be a requirement of contractors.
- ***Environmental Planning Record (Optional)*** - this is an optional but recommended document that records the progress and a process of environmental considerations throughout a given program's development. It may be a journal with periodic entries, a file of memoranda, trip reports, and so forth. It is designed to be a visible track record of how environmental factors have actually been considered and incorporated throughout the planning process. It can be made a requirement of contractors.
- ***Environmental Monitoring Report (Optional)*** - an optional but recommended report prepared at one or more point after program or action execution. Its purpose is to determine the accuracy of impact predictions, and it can serve as the basis for adjustments in mitigation programs and to adjust impact predictions in future projects.
- ***Final Environmental Impact Statement (FEIS)*** - this document is the result of the analysis of comments concerning the DEIS. Comments are to be received from: designated Federal, state, and local agencies; any agency that has requested copies of impact statements; and the public (including interested or affected persons and organizations).

- ***Finding of No Significant Impact (FNSI)*** - a document that briefly presents the reasons why an action, not otherwise excluded, does not need an EIS. A FNSI includes a summary of the conclusions of the EA and notes any environmental documents related to it. If the EA is attached to the FNSI, the FNSI need not repeat any of the EA's discussion, but may incorporate it by reference. It is always signed by the decisionmaker.
- ***Life Cycle Environmental Document (LCED)*** - a programmatic assessment addressing the known and reasonably foreseeable environmental impacts of a proposed item/system during all phases of development, production, use, and disposal. It may be in the form of an EA or an EIS, and must be supplemented to address additional significant environmental impacts as conditions change. It is most frequently used within the materiel research, development, and acquisition community.
- ***Notice Of Intent (NOI)*** - a notice that an EIS will be prepared and considered. It should contain:
 - (a) a description of the proposed action and possible alternatives
 - (b) the proposed scoping process and schedule
 - (c) the name and address of the person who can give more information.
- ***Preliminary Assessment Screening (PAS)*** - a new, less inclusive version of the EBS.
- ***Preliminary Draft Environmental Impact Statement (PDEIS)*** - a document containing information obtained and decisions made during the scoping process.
- ***Record of Environmental Consideration (REC)*** - a document that describes the proposed action and anticipated timeframe, identifies the proponent, and explains why further environmental analysis and documentation is not required. It is a signed statement to be submitted with project documentation. Furthermore, it is used when the proposed action is exempt from the requirements of NEPA, or has been adequately assessed in existing documents and determined not to be environmentally significant. It is also used to document the use of those CXs that require such records.
- ***Records of Decision (ROD)*** - this document is required after completion of an EIS. Generally, it is to: state what the decision was; identify all alternatives considered and specifying which alternative was environmentally preferable; and state whether all practicable means to avoid or minimize environmental harm from the selected alternative have been adopted and if not, why not. In addition, it states the monitoring and mitigation program adopted (if needed). It may also discuss preferences among alternatives based on nonenvironmental

factors (economic and technological). The ROD is not considered an environmental document since the decision considers these other, non-environmental factors in addition to environmental factors.

- *Scoping* - this process occurs when the planning for an Army project or action indicates a need for the preparation of an EIS. Scoping determines the scope of issues to be addressed in the EIS and identifies the significant issues related to the proposed action. The parties identify the range of actions, alternatives, and impacts to consider in the EIS.

Appendix 12-1

Environmental Impact Statement Procedures Checklist

Environmental Impact Statements (EISs) are required under the provisions of the National Environmental Policy Act (NEPA) of 1969, implemented in 40 CFR 1500-1508. A wide variety of actions may require the filing of an EIS (see protocols of this section for a listing).

Reviewers should ensure that the following steps are followed in the EIS process:

(NOTE: For EISs in progress at the time of the ECAS review, make the following determinations and verifications only up to the stage of development that has been reached by the EIS to date.)

1. Determine that a notice of intent (NOI) of the proposed action is published in the Federal Register and made available to the media in the areas potentially affected by the proposed action.

- Verify that copies of the NOI and a proposed press release have been forwarded through MACOM to the HQDA proponent for coordination prior to publication.

2. After the NOI has been published, verify that "scoping" procedures have begun, to determine the relative significance of issues and to what depth they must be addressed in the EIS.

3. Verify that a preliminary draft is prepared from the "scoping" procedure with the following format:

a. Cover sheet: title of submitting agency; title of proposed action; location of proposed action; name, address, and phone number of contact for further information; designation of the statement as a draft, final, draft supplement, or final supplement; a one paragraph abstract of the statement, and the date by which comments must be received.

b. Summary: must adequately summarize the statement, stressing major conclusions, areas of controversy, and issues to be resolved (not more than 15 pages).

c. Purpose and need: briefly specifying the underlying purpose and need to which the installation is responding in proposing the alternatives including the proposed action.

d. Alternatives including the proposed action: explore and objectively evaluate all reasonable alternatives; identify preferred alternative and explain reasoning.

e. Affected environment: description of the area(s) to be affected or created by the alternatives under consideration.

f. Environmental consequences: discussion of direct effects and their significance, indirect effects and their significance, possible conflicts between the proposed action and the objectives of NEPA, and environmental effects of alternatives.

g. List of preparers: names and qualifications of persons primarily responsible for preparing the EIS or background papers.

h. Appendix: material prepared in coordination with the EIS, normally analytic and relevant to discussions being made.

Appendix 12-1 (Continued)

4. Verify that the preliminary draft is edited and distributed in the following manner:
 - a. Fifteen copies of the preliminary draft environmental impact statement (PDEIS) are sent through MACOM to HQDA proponent for distribution.
 - b. The PDEIS is returned to the preparer for revision as required and printing of the draft EIS (DEIS) for filing.
 - c. Copies of the DEIS are distributed among the proper Federal agencies and printed in the Federal Register.
 - d. A public review period is allowed to provide for public and specialist objections and comments:
 - (1). Not less than 45 days for public comment on DEISs;
 - (2). Not less than 15 days for public availability of DEISs prior to any public hearing on the DEIS;
 - (3). Not less than 90 days total for public availability of the DEIS and Final Environmental Impact Statement (FEIS) prior to any decision on the proposed action.
 - e. Responses to comments must be incorporated in the final EIS (FEIS) by either modifying the text or providing a written explanation in the comment section.
5. Verify that a final EIS is prepared from this last preliminary draft EIS, and that mitigation and implementation are begun.
6. Verify that organizations which will perform or arrange mitigations committed in the EIS or ROD, but did not participate in EIS development, have been notified of their mitigation responsibilities and are prepared to or have already arranged for mitigations to be performed.
7. If an action was rescinded or changed such that the action will be assessed in another NEPA document, verify that a notice was placed in the Federal Register and all interested persons are notified of the disposition of the action.

Section 13

ASBESTOS MANAGEMENT PROGRAM

SECTION 13

ASBESTOS MANAGEMENT PROGRAM

A. Applicability of this Protocol

This protocol applies to all Army installations. Currently this section contains protocols for asbestos. Asbestos is regulated on the Federal level by the United States Environmental Protection Agency (USEPA), though in some cases states have also promulgated regulations. The Asbestos Management protocol is written in response to the Federal regulations applicable to the conduct of activities involving asbestos management.

Specific state regulations are not included in this protocol. However, an outline of the typical contents of such regulations is provided.

The Asbestos Abatement protocol is used to determine the compliance status of the management activities associated with asbestos on the installation and in schools, and its removal from buildings and ultimate disposal.

B. Federal Legislation

- National Emissions Standards for Hazardous Air Pollutants (NESHAPs) were developed for air pollutants for which no ambient air quality standards are applicable and which may result in an increase of mortality or serious irreversible illness. Asbestos is one of the air pollutants for which standards define emission limits, monitoring requirements, worker practice standards, restrictions on material use, disposal, and reporting requirements.
- *OSHA's Safety and Health Standards*, specified in 29 CFR 1910, address occupational exposure and acceptable levels of exposure to asbestos, tremolite, anthophyllite, and actinolite in general industry and construction. Because these regulations are not considered environmental regulations, they are not included in this protocol.
- Requirements pertaining to asbestos are included in regulations promulgated pursuant to the Clean Air Act (CAA) and the Toxic Substance Control Act (TSCA). CAA Amendments of 1970 required the USEPA to develop NESHAP. CAA also established standards for asbestos emissions during renovation and demolition projects. In 1971, the USEPA listed asbestos as a hazardous air pollutant and established emission standards for asbestos in 40 CFR 61, Subpart M, *National Emissions Standards for Hazardous Air Pollutants*, for the following areas:

- manufacturing
 - fabrication
 - spray application
 - waste packaging
 - labeling
 - disposal.
- The Asbestos Hazard Emergency Response Act (AHERA) [PL 99-519 USC] amended TSCA in 1986 to include regulations that require local education agencies to inspect their school buildings for materials containing asbestos, develop asbestos management plans, and implement response actions in a timely fashion. Regulations under AHERA for schools are contained in 40 CFR 763, Subpart E, *Asbestos*. Regulations governing asbestos abatement projects and employees who take part in asbestos removal are in 40 CFR 763, Subpart G.
- The Hazardous Materials Transportation Act was amended in 1978 to regulate the transport of asbestos materials. The regulations are contained in 49 CFR 172-177. In particular, 49 CFR 177, *Transportation of Hazardous Waste*, requires that asbestos be loaded, handled, and unloaded in a manner that will minimize occupational exposure to airborne asbestos. Asbestos wastes transported for disposal at a landfill or other disposal facility must meet all applicable requirements.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with all Federal, state, and local environmental regulations. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities it funds meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such regulations. In addition, the Executive Order requires each agency to ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Requirements

Many state and local governments have enacted standards more stringent than the Federal requirements. If the installation is engaging in asbestos removal or disposal, contact the appropriate state and local agencies.

In all cases, the most stringent regulations should be followed.

D. DoD Regulations

- None.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 10, *Asbestos Management Program*, prescribes policy and procedures for managing asbestos and asbestos-containing materials (ACM) and wastes. It requires compliance with all applicable Federal, state, and local regulations.

F. Key Compliance Requirements

- NESHAP regulation apply to existing and new stationary sources. The regulations are based on health effects and a strong reliance on technological capabilities. Army installations involved in the demolition or renovation of buildings that contain asbestos are likely to be affected by these regulations. USEPA and state notification must be given if renovation or demolition is planned. Installations involved in these activities must regulate the emissions that are caused by the removal of friable asbestos. Once the asbestos has been removed, it must be disposed of in accordance with the Clean Air Act and the Hazardous Materials Transportation Act. The asbestos waste products must be disposed of in leakproof containers with proper hazard labeling. Installations that operate primary and secondary schools must test friable materials for asbestos content and document these results.

G. Responsibility for Compliance

- Directorate of Engineering and Housing (DEH) establishes an installation asbestos management team and appoints an asbestos management control officer or team leader. The DEH will also maintain records of asbestos survey results and plans and updates the records as changes occur. Additionally, DEH will maintain records for 30 years after the last incidence of employee exposure to asbestos. See protocol, Chapter 13, Item 13-5, for guidance on plan preparation.
- Asbestos Management Team prepares the Asbestos Management Plan which contains documentation on all asbestos management efforts and the mechanism for oversight of the program. The team, as a minimum, consists of representatives from DEH, Environmental Office, Preventive Medicine, Safety Office, Civilian Personnel Office (CPO), Staff Judge Advocate (SJA), and Public Affairs Office (PAO).

H. Key Compliance Definitions

These definitions were obtained from Army, DoD, and compliance regulations cited previously.

- *Active Waste Disposal Site* - any disposal site other than an inactive site.
- *Adequately Wet* - sufficiently mix or penetrate with liquid to prevent the release of particulates.
- *Administrative Record* - all documents that have a legal bearing on the remedial action. The record is required for every response action, is used for judicial review, and forms the basis for the selection of response actions at Third-Party sites.
- *Applicable or Relevant and Appropriate Requirements (ARARs)* - Federal and state laws that must be considered when a remedial action is being chosen.
- *Asbestos* - substances comprised of or derived from actinolite, amosite, anthophyllite, chrysotile, crocidolite, or tremolite.
- *Asbestos-Containing Waste Materials* - any waste that contains commercial asbestos and is generated by a source subject to the provisions of 40 CFR Subpart M. This term also includes asbestos waste from control devices, friable asbestos waste material, and bags or containers that previously contained commercial asbestos. As applied to demolition and renovation operations, this term also includes regulated asbestos-containing material waste and materials contaminated with asbestos.
- *Asbestos Waste from Control Devices* - any waste material that contains asbestos and is collected by a pollution control device.
- *Category I Nonfriable Asbestos-Containing Material (ACM)* - asbestos-containing packings, gaskets, resistant floor covering, and asphalt roofing products containing more than one percent asbestos.
- *Category II Nonfriable ACM* - any material excluding Category I nonfriable ACM, containing more than one percent asbestos that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.
- *Cost* - the amount of funds required to put in place the necessary environmental protection measures, irrespective of the appropriation chargeable.

- *Demolition* - the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations, or the intentional burning of any facility.
- *Emergency Renovation Operation* - a renovation operation that was not planned but results from a sudden, unexpected event. This term includes operations necessitated by nonroutine failures of equipment.
- *Facility* - any institutional, commercial, or industrial structure, installation, or building (excluding apartment buildings having no more than four dwelling units), and any active or inactive waste disposal site.
- *Facility Component* - any pipe, duct, boiler, tank, reactor, turbine, or furnace at or in a facility; or any part of a facility.
- *Friable Asbestos Material* - any material that contains more than 1 percent asbestos by weight that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.
- *Good Management Practice* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *In or Near Commercial Buildings* - within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 meters of a nonindustrial, nonsubstation building.
- *Inactive Waste Disposal Site* - any disposal site or portion of it where additional asbestos-containing waste material has not been deposited within the past year.
- *Industrial Building* - a building directly used in manufacturing or technically productive enterprises.
- *Outside Air* - the air outside buildings and structures.
- *Particulate Asbestos Material* - finely divided particles of asbestos material.
- *Removal Response* - an immediate action taken over the short-term to address a release or threatened release of a hazardous substance that poses a significant threat to public health or the environment.
- *Regulated Asbestos-Containing Material (RACM)* -includes friable asbestos material; Category I Nonfriable asbestos containing material that has become friable; Category I nonfriable asbestos containing material that has been sub-

jected to sanding, grinding, cutting, or abrading; and Category II nonfriable asbestos containing material that has a high probability of becoming crumbled, crushed, or pulverized.

- *Remove* - to take out regulated asbestos-containing materials from any facility.
- *Renovation* - altering, in any way, one or more facility components. Operations in which load-supporting structural members are wrecked or taken out are excluded.
- *Strip* - to take off RACM from any part of a facility or a facility component.
- *Structural Member* - any load-supporting member of a facility, such as beams and load-supporting walls; or any nonload-supporting member, such as ceilings and nonload-supporting walls.

| Demolitions or renovations of a structure containing friable asbestos | 13-11 through 13-20 | (1)(2)(3)(6)(9) |
| Installation disposal of asbestos | 13-21 through 13-25 | (1)(2)(6)(9) |
| DoD-owned primary or secondary schools | 13-26 | (1)(2)(9) |

(a) CONTACT/LOCATION CODE:

- (1) Directorate of Engineering and Housing (DEH)
- (2) Environmental Coordinator (EC)
- (3) Preventive Medicine Officer
- (6) Director of Logistics (DOL)
- (9) Chief of Operations and Maintenance (O&M)

ASBESTOS MANAGEMENT PROGRAM

Records to Review:

- Installation asbestos management plan and operating plan
- Notifications to regulators concerning asbestos disposal
- Records of on-site disposal and transportation, and off-site disposal of asbestos
- Regulatory inspection reports
- Documentation of asbestos sampling and analytical results
- Documentation of preventative measure or action
- Results of air sampling at the conclusion of response action
- Records of asbestos training program
- List of buildings insulated with asbestos or housing asbestos-containing materials
- Record of demolition or renovation projects completed in the past 5 years that involve friable asbestos
- Decision documents / records of decision
- Administrative Record

Physical Features to Inspect:

- Pipe, spray-on, duct, and troweled cementitious insulation and boiler lagging
- Ceiling and floor tiles
- Asbestos insulation in equipment (exhaust systems, generators, vehicles, aircraft, etc.)
- Maintenance shops (brake shoes, clutch plates)

People to Interview:

- Directorate of Engineering and Housing (DEH)
- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Director of Logistics (DOL)
- Chief of Operations and Maintenance (O&M)
- Staff Judge Advocate (SJA)
- Troop Self-Help Projects
- DEH Shop Work

Section 14

NOISE ABATEMENT

Section 14

NOISE ABATEMENT

A. Applicability of this Protocol

This protocol applies to all Army installations that have aircraft operations (including airfields), ranges, military operating areas (MOAs), military training routes (MTRs), or other aircraft and small arms training noise generating activities that could affect the environment. This protocol presents review action items that correspond to mechanisms for planning operations with consideration for noise. Noise effects are addressed by Installation Comprehensive Planning (ICP), the Installation Compatible Use Zone Program (ICUZ), and state and local noise zoning and land-use controls.

B. Federal Legislation

The Noise Control Act of 1972 established that Federal Agencies, when engaged in an activity resulting in the emission of noise, should comply with Federal, state, interstate, and local requirements respecting control and abatement of environmental noise to the same extent as private entities. Even though the primary operational interest of this legislation as well as the Aviation Safety and Noise Abatement Act is directed to aircraft and airports, the principles involved are applicable to other activities that produce sufficient noise to result in incompatible land uses in the surrounding community.

The Noise Control Act exempts the following items from product environmental noise requirements:

- military weapons or equipment designed for combat use
- rockets or equipment designed for research, experimental, or developmental work for the National Aeronautics and Space Administration
- other machinery or equipment designed for use in experimental work done by or for the Federal government.

C. State/Local Regulations

State, regional, and local governmental agencies have noise control and land use regulations that have the potential to affect the mission capability of Army

installations, especially when they provide controls in areas producing and /or affected by Army noise. As a general rule, states tend to treat environmental noise as a source-specific pollutant whose emissions will be controlled by the locally affected community.

Individual state and local governments may regulate the following activities:

- Airfields
- Weapon, rocket, missile firing ranges
- Small-arms training
- Vehicles
- Power-generating equipment
- Demolition and explosive-disposal sites
- Industrial activities.

D. DoD Regulations

- DoD Instruction 4165.57, *Air Installation Compatible Use Zones*, sets forth policy on achieving compatible use of public and private lands in the vicinity of military airfields. DoD air installations are required to develop, implement, and maintain an Air Installation Compatible Use Zones (AICUZ) program with desirable restrictions on land use to assure compatibility with the installation's mission.

E. U.S. Army Regulations

- AR 200-1, Chapter 7, *Environmental Noise Abatement Program*, outlines the requirements for compliance with Federal laws and regulations on the control and abatement of environmental noise. These requirements include assessment of the impact of noise produced by proposed Army actions and maintenance of an active Installation Compatible Use Zone (ICUZ) program.
- DA Memorandum from Director of the Army Staff, 14 July 1987, Subject: Installation Compatible Use Zone (ICUZ) Program Implementation.

F. Key Compliance Requirements

- ICUZ Noise Contour Maps - up-to-date noise zone maps for the installation's current and long range peacetime capabilities are completed.
- ICUZ Study - Initial and follow-up ICUZ studies have been conducted.

- ICUZ Coordination - Explained and provided technical assistance to local, regional, and state planning agencies.
- Noise Mitigation - Identified noise sources that create impact and mitigated when possible.
- ICUZ Committee -Established an ICUZ committee.
- Operational Data - Maintaining a log of range and aircraft operational data.
- ICUZ Point of Contact - Designated an installation single point of contact for noise complaints.

G. Responsibility for Compliance

- ICUZ Committee - Each installation shall have an ICUZ committee. Membership should include as a minimum, representatives from the installation commander; environmental management; master planning; Public Affairs Office (PAO); Staff Judge Advocate (SJA); and plans, operations, and training (range control and airfield operations). The ICUZ committee shall be responsible for reviewing complaints; investigating and recommending mitigative actions; coordinating with the public as necessary; assessing installation activities for potential noise impacts; monitoring land development plans, programs, and projects in areas adjacent to the installation; and reviewing development of on-post facilities. (NOTE: The functions of the ICUZ committee may be incorporated into the Environmental Quality Control Committee (EQCC); see Section 16 of this manual for information on the EQCC.)

H. Key Compliance Definitions

These definitions were obtained from DoD, Federal, and U.S. Army regulations cited previously.

- *A-weighted Sound Level* - this is a quantity, in decibels (dB), read from a sound level meter with A-weighting circuitry. A-weighting frequency network of the sound level meter deemphasizes the lower frequency portion of the noise spectrum to approximate the human ear's response to the noise. This A-weighting frequency response is specified by an American National Standards Institute (ANSI) standard. Thus, A-weighting of the frequency content of the noise signal has been found to have an excellent correlation with the human subjective judgement of annoyance of the noise. The sound pressure levels measured using the A-weighting network are expressed in dBA.

- *C-weighted Sound Level* - this is a quantity, in decibels, read from a sound level meter with C-weighting circuitry. To assess the additional annoyance caused by low frequency vibration of structures, the C-weighting network is used to evaluate the impulsive noise from all weapons larger than small arms. This weighting is also specified by ANSI standard. The sound pressure levels measured using the C-weighting network are expressed as dBC.
- *dBA* - sound level in decibels, measured using the A-weighting network of a sound level meter.
- *dBC* - a sound level in decibels, measured using the C-weighting network of a sound level meter.
- *Decibel (dB)* - sound is measured in decibels. The zero on the decibel scale is based on the lowest sound level that a healthy, unimpaired human ear can hear. Decibels are not linear, but representative points on a sharply rising (exponential) curve.
- *Environmental Noise* - noise sources that interfere with desired activities, or cause annoyance. These desired activities include, but are not limited to, sleep, recreation, and speech. Environmental noise also is the outdoor noise environment consisting of the noise, including ambient noise, from all sources that extends beyond the workplace. The noise environment of the workplace is not considered environmental noise.
- *Installation Compatible Use Zone (ICUZ) Program* - the primary strategy for protecting an installation's mission from the problems of noise and land use incompatibility.

- ICUZ Coordination - Explained and provided technical assistance to local, regional, and state planning agencies.
- Noise Mitigation - Identified noise sources that create impact and mitigated when possible.
- ICUZ Committee -Established an ICUZ committee.
- Operational Data - Maintaining a log of range and aircraft operational data.
- ICUZ Point of Contact - Designated an installation single point of contact for noise complaints.

G. Responsibility for Compliance

- ICUZ Committee - Each installation shall have an ICUZ committee. Membership should include as a minimum, representatives from the installation commander; environmental management; master planning; Public Affairs Office (PAO); Staff Judge Advocate (SJA); and plans, operations, and training (range control and airfield operations). The ICUZ committee shall be responsible for reviewing complaints; investigating and recommending mitigative actions; coordinating with the public as necessary; assessing installation activities for potential noise impacts; monitoring land development plans, programs, and projects in areas adjacent to the installation; and reviewing development of on-post facilities. (NOTE: The functions of the ICUZ committee may be incorporated into the Environmental Quality Control Committee (EQCC); see Section 16 of this manual for information on the EQCC.)

H. Key Compliance Definitions

These definitions were obtained from DoD, Federal, and U.S. Army regulations cited previously.

- *A-weighted Sound Level* - this is a quantity, in decibels (dB), read from a sound level meter with A-weighting circuitry. A-weighting frequency network of the sound level meter deemphasizes the lower frequency portion of the noise spectrum to approximate the human ear's response to the noise. This A-weighting frequency response is specified by an American National Standards Institute (ANSI) standard. Thus, A-weighting of the frequency content of the noise signal has been found to have an excellent correlation with the human subjective judgement of annoyance of the noise. The sound pressure levels measured using the A-weighting network are expressed in dBA.

- ***C-weighted Sound Level*** - this is a quantity, in decibels, read from a sound level meter with C-weighting circuitry. To assess the additional annoyance caused by low frequency vibration of structures, the C-weighting network is used to evaluate the impulsive noise from all weapons larger than small arms. This weighting is also specified by ANSI standard. The sound pressure levels measured using the C-weighting network are expressed as dBC.
- ***dBA*** - sound level in decibels, measured using the A-weighting network of a sound level meter.
- ***dBC*** - a sound level in decibels, measured using the C-weighting network of a sound level meter.
- ***Decibel (dB)*** - sound is measured in decibels. The zero on the decibel scale is based on the lowest sound level that a healthy, unimpaired human ear can hear. Decibels are not linear, but representative points on a sharply rising (exponential) curve.
- ***Environmental Noise*** - noise sources that interfere with desired activities, or cause annoyance. These desired activities include, but are not limited to, sleep, recreation, and speech. Environmental noise also is the outdoor noise environment consisting of the noise, including ambient noise, from all sources that extends beyond the workplace. The noise environment of the workplace is not considered environmental noise.
- ***Installation Compatible Use Zone (ICUZ) Program*** - the primary strategy for protecting an installation's mission from the problems of noise and land use incompatibility.

Section 15

RADON PROGRAM

SECTION 15

RADON PROGRAM

A. Applicability of this Protocol

This protocol applies to all Army installations. Currently this section contains protocols for radon gas. Radon Program protocols are written in response to the Federal regulations that are applicable to the conduct of activities involving these programs.

Specific state regulations are not included in this protocol. However, an outline of the typical contents of such regulations is provided.

The Radon Program protocol is used to determine the compliance status of the management activities associated with the Army Radon Reduction Program (ARRP).

B. Federal Legislation

- No legal standards currently regulate radon in residential housing; however, the United States Environmental Protection Agency (USEPA) recommends mitigation actions be taken when the average annual radon concentration in the building exceeds 4 picoCuries per liter of air (4pCi/l). There is no absolute *danger level*.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with all Federal, state, and local environmental regulations. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities it funds meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such regulations. In addition, the Executive Order requires each agency to ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Requirements

State and local governments may enact radon control standards.

D. DoD Regulations

- None.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 11, *Army Radon Reduction Program (ARRP)*, describes policy and procedures for assessing indoor levels of radon and mitigating radon in structures where the levels are elevated. The program is decentralized; that is, each installation is responsible for funding, executing, documenting, and managing the radon monitoring and mitigation efforts based on ARRP.

F. Key Compliance Requirements

ARRP applies to all major Army installations. The program is designed to assess radon levels on a priority basis using the following priority list in family housing, administrative buildings (offices), dormitories, child care facilities, temporary lodging facilities, etc. Detailed assessments will be accomplished at the installations where initial screening results identify a radon problem. Following mitigation, post mitigation assessments are conducted to ensure the effectiveness of the mitigation actions. Mitigation actions are prioritized using the table below:

Priority 1: Day care centers, hospitals, schools, and living areas (that is, quarters, unaccompanied personnel housing, and billets).

Priority 2: Areas having 24-hour operations, such as operations centers and training and research, development, test, and evaluating (RDTE) facilities.

Priority 3: All other routinely occupied structures.

MITIGATION TIME FRAME
(AR 200-1, Chapter 11-3, Table 11-1)

| Radon Level (pCi/L) | Mitigate: |
|-------------------------------|-------------------------------|
| Greater than 200 ¹ | 1 month or move the occupants |
| 200-20 ¹ | 6 months |
| 20-8 ² | 1-4 years ³ |
| 8-4 ² | 5 years |
| 4 or less ¹ | No action required |

¹Determine by 90-day screen or a 1-year measurement in the case of Priority 2 and 3 structures.

²Annual average determined by 1-year measurement. Screening measurements in this range will not be used as the basis for initiating mitigation actions.

³Depending on the level of the measurement.

G. Responsibility for Compliance

- Army Corps of Engineers is responsible for review of radon assessments and implementation of radon mitigation activities in accordance with Army ARRP.

H. Key Compliance Definitions

These definitions were obtained from Army, DoD, and compliance regulations cited previously.

- *Army Radon Reduction Program (ARRP)* - a programs whose objectives include the identification of structures owned and leased by the Army (CONUS AND OCONUS) that have indoor radon levels greater then 4 picoCuries per liter (pCi/l) of air and the modifications of those buildings found with excess levels of radon.
- *Administrative Record* - consists of all documents that have a legal bearing on the remedial action. It is required for every response action, is used for judicial review, and forms the basis for the selection of response actions at Third-Party sites.
- *Applicable or Relevant and Appropriate Requirements (ARARs)* - Federal and state laws that must be considered, when a remedial action is being chosen.
- *Cost* - the amount of funds required for putting in place the necessary environmental protection measures, irrespective of the appropriation chargeable.
- *Facility* - any institutional, commercial, or industrial structure, installation, or building (excluding apartment buildings having no more than four dwelling units).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *In or Near Commercial Buildings* - within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 meters of a nonindustrial, nonsubstation building.
- *Industrial Building* - a building directly used in manufacturing or technically productive enterprises.
- *Lowest Living Area (LLA)* - is defined as follows:
 1. For structures without subsurface areas, the LLA is the ground floor.

2. For structures with subsurface areas, the LLA is defined as the lowest area in that structure that has a finished, hard surface floor (for example, concrete or tiled) that is or could be used. A dirt breezeway is not an LLA, but an unfinished basement with a concrete floor is, regardless of what the current occupants are using the area for.

- *Outside Air* - the air outside buildings and structures.
- *PicoCurie (pCi)* - quantity of radioactive material producing 2.22 nuclear transformations/minute.
- *Radon-222* - a naturally occurring, inert, radioactive gas that is formed from the radioactive decay of uranium.

Section 16

ENVIRONMENTAL PROGRAM MANAGEMENT

SECTION 16

ENVIRONMENTAL PROGRAM MANAGEMENT

A. Applicability of this Protocol

This protocol applies to all Army facilities. Currently, this section contains protocols for environmental program management activities, including the A-106 Pollution Abatement Plan. (This document is more widely known as the RCS 1383 Report.) The Environmental Program Management protocol is written in response to the Federal, DoD, and Army regulations applicable to the conduct of activities involving these programs. This section is designed to evaluate and examine the interaction within the Environmental Office, and the Directorate of Engineering and Housing (DEH), interface with other Directorates/Installation Activities, and relationships with the applicable MACOM.

Specific state regulations are not included in this protocol.

B. Federal Legislation

This section contains policy for management of the environmental programs described in previous sections. The controlling legislation for the various management activities is referenced in the appropriate sections. Only the A-106 Pollution Abatement Plan is included here.

- A-106 Pollution Abatement Plan / RCS 1383 Report

Office of Management and Budget (OMB) Circular A-106 implements the requirement in Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, for assuring that Federal agencies, facilities, programs, and activities meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such regulations. Army regulations for implementing the A-106 / RCS 1383 report are set forth in 32 CFR 650, Subpart J.

- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with all Federal, state, and local environmental regulations. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities it funds meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such

regulations. In addition, the Executive Order requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State / Local Requirements

- A-106 Pollution Abatement Plan / RCS 1383 Report
- There are no state- or local-specific requirements.

D. DoD Regulations

- None.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, and AR 200-2, *Environmental Effects of Army Actions*, together establish Army environmental policy. AR 200-1, includes requirements for environmental compliance, auditing, reports, the establishment of Environmental Quality Control Councils (EQCCs) and Technical Review Committees (TRCs), making environmental agreements, and regulations on property transactions and construction sites.
- AR 200-2, *Environmental Effects of Army Actions*, incorporates the requirements of the National Environmental Policy Act (NEPA) (40 CFR 1500-1508), and Department of Defense Directive (DoD) 6050.1, *Environmental Effects in the United States of DoD Actions*. Provisions for NEPA compliance are included in Section 12 of this manual.
- AR 200-1, *Environmental Protection and Enhancement*, briefly outlines the A-106 procedure. The U.S. Army Toxic and Hazardous Materials Agency (USATHAMA), in coordination with the Army Environmental Office, sends detailed technical guidance to the Major Army Commands (MACOMs) for the collection and processing of information required for the report. This includes a listing of pollutant categories, for which A-106 / RCS 1383 reports should be filed. Installation commanders are responsible for ensuring that their A-106 / RCS 1383 reports are prepared jointly by the installation's engineering and environmental staffs and resource managers, in consultation with United States Environmental Protection Agency (USEPA).

F. Key Compliance Requirements

- **A-106 Pollution Abatement Program / RCS 1383 Report**

The A-106 / RCS 1383 report is required for all Army installations.

G. Responsibility for Compliance

- **Installation (ICs), activity, and unit commanders will:**

Be actively involved and maintain awareness of environmental programs, activities, critical issues, Notices of Violation (NOVs), 1381 submissions, Command Operating Budget (COB) environmental entries and of results and updates of the Environmental Compliance Assessment System (ECAS) reports (assessment report and corrective action management plan).

Ensure other Directorates, tenant activities and unit commanders cooperate with the DEH on environmental responsibilities.

Conduct initial and follow-up ECAS assessments (ECAS program).

- **Directorate of Engineering and Housing (DEH) will:**

Prepare and provide input into the Annual Work Plan (AWP), COB, and other budgetary documents.

Prepare the A-106/RCS 1383 report.

Prepare the 1485 Defense Environmental Management Information System (DEMIS) report.

Provide Notices of Violations from regulatory agencies to respective MACOM.

- **Public Affairs Office (PAO) will:**

Establish the necessary support to DEH and interface with public, to include maintaining the Public Affairs Plan.

- **Safety Office will:**

Provide required support for management of hazardous materials (i.e, worker protection guidance, inspection assistance).

- **Preventive Medicine Office will:**

Provide required respiratory and protective support, conducting and maintaining baseline medical surveys.

Provide Quality Assurance/Quality Control (QA/QC) on management of pathological wastes.

- **Director of Logistics (DOL) will:**

Be responsible for compliance and QA/QC on the Used Solvent Elimination (USE) Program, POL management (new and used materials), hazardous materials tracking to include Material Safety Data Sheets (MSDS), and environmental controls/oversight of maintenance, transportation, and ammunition storage activities.

- **Civilian Personnel Office (CPO) will:**

Provide personnel active support regarding classification, recruitment, and placement.

- **Director of Resource Management (DRM) will:**

Provide support and guidance to manpower survey/Schedule X activity in establishing and maintaining required staffing.

H. Key Compliance Definitions

These definitions were obtained from Army, DoD, and compliance regulations cited previously.

- *Active Waste Disposal Site* - any disposal site other than an inactive site.
- *Administrative Record* - consists of all documents that have a legal bearing on the remedial action. It is required for every response action, is used for judicial review, and forms the basis for the selection of response actions at Third-Party sites.
- *Applicable or Relevant and Appropriate Requirements (ARARs)* - Federal and state laws which must be considered when a remedial action is being chosen.

- **Class I** - includes projects required to meet the provisions of assigned compliance agreement or consent order; projects required to correct deficiencies found on an EPA or State inspection; other projects needed to come into compliance when statutory/regulatory deadlines have passed.
- **Class II** - includes those projects needed to meet future compliance deadlines for which planning must have already started.
- **Class III** - includes all other projects which while important are not related to imminent compliance requirements.
- **Compliance Status** - a four letter code identifying the current compliance status of the pollution source for which a project is being funded.
 - **CMPA**: Required to meet conditions of a signed Federal Facility Compliance Agreement, Consent Order or equivalent state or local enforcement action. Project Assessment value: HIGH.
 - **INOV**: Required to meet deficiencies found on inspection by regulatory authority or cited in a Notice of Violation (NOV) or equivalent. Project Assessment value: HIGH.
 - **ESDP**: Does not meet established standard and compliance deadline has passed. Project Assessment value: HIGH.
 - **ESDF**: Does not meet established standard and compliance deadline is in the future.
 - **PSDF**: Does not meet pending standard and compliance deadline is in the future.
 - **ESRO**: Meets established standard but needs replacement due to need for obsolescence.
 - **ESRE**: Meets established standard but needs replacement due to need for expansion.
 - **ESDL**: Meets established standard but needs to demonstrate leadership.
 - **OTHR**: Other. Projects which don't fit any of the above categories.

The Environment Assessment shall include brief discussions of the need for the proposal, or alternatives, and of the environmental impacts of the proposed actions and alternatives, and a listing of the agencies and persons consulted.

- **Cost** - the amount of funds required to put in place the necessary environmental protection measures, irrespective of the appropriation chargeable.
- **Decision Document** - a means of recording significant decisions in the Installation Restoration Program (IRP). Steps or stages that merit a Decision Document include: selecting a remedial action; initiating long-term monitoring; initiating a removal action; closing out a site; and reactivating a site. Decision Documents may be used for both National Priority List (NPL) and non-NPL sites.

- ***Defense Environmental Restoration Account (DERA)*** - the DoD funding program for the IRP.
- ***Demolition*** - the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations.
- ***Emergency Renovation Operation*** - a renovation operation that was not planned but results from a sudden, unexpected event. This term includes operations necessitated by nonroutine failures of equipment.
- ***Endangered Assessment*** - a study conducted as a supplement to a remedial investigation to determine the nature and extent of contamination at a site and the risks posed to public health and/or the environment. An endangered assessment is conducted when legal action is pending to require potentially responsible parties to perform or pay for the site cleanup.
- ***Environmental Assessment (EA)*** - refers to a concise public document prepared by the installation to evaluate the proposed action and its potential effects on the environment. In general, it serves to:
 - briefly provide sufficient evidence and analysis for determining whether to prepare an environmental impact statement, or a finding of no significant impact
 - aid an agency's compliance with the Act when no environmental impact statement is necessary
 - facilitate preparation of a statement when one is necessary.

The Environment Assessment shall include brief discussions of the need for the proposal, or alternatives, and of the environmental impacts of the proposed actions and alternatives, and a listing of the agencies and persons consulted.

- ***Environmental Impact Statement (EIS)*** - a detailed, written statement required by NEPA for major Federal actions with significant environmental effects.
- ***Feasibility Study*** - within the IRP (or Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)), the means for development, evaluation, selection, and description of remedial action alternatives.
- ***Finding of No Significant Impact (FNSI)*** - a document that briefly presents the reasons why an action, not otherwise excluded, does not need an EIS.
- ***Good Management Practice (GMP)*** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.

- ***Life Cycle Environmental Document (LCED)*** - a programmatic assessment addressing the known and reasonably foreseeable environmental impacts of a proposed item/system during all phases of development, production, use, and disposal.
- ***National Priorities List (NPL)*** - the list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial response.
- ***Notice of Intent (NOI)*** - a notice that an EIS will be prepared and considered. It should contain:
 - (a) a description of the proposed action and possible alternatives
 - (b) the proposed scoping process and schedule
 - (c) the name and address of the person who can give more information.
- ***Practicable*** - capable of being used in accordance with applicable specifications, available at a reasonable price and within a reasonable time-frame, and with the maintenance of a satisfactory level of competition.
- ***Preliminary Assessment*** - the process of collecting and reviewing available information about a known or suspected hazardous waste site or release. The Army, USEPA, or states use this information to determine if the site requires further study.
- ***Procuring Agency*** - all Federal agencies, or any state agency, or agency of a political subdivision of a state, that is using appropriated Federal funds for such procurement, or any person contracting with any such agency with respect to work performed under such a contract.
- ***Records of Decision (ROD)*** - a public document that explains which cleanup alternative(s) will be used at National Priorities List sites. The Record of Decision is based on information and technical analysis generated during the remedial investigation / feasibility study and consideration of public comments and community concerns.
- ***Remedial Action (RA)*** - the actual construction or implementation phase that follows the remedial design of the selected cleanup alternative at a site.
- ***Remedial Action Plan (RAP)*** - the process of selecting and describing remedial actions; also the report documenting that process.
- ***Remedial Design (RD)*** - an engineering phase that follows the Record of Decision when technical drawings and specifications are developed for the subsequent remedial action at a site.

- **Remedial Investigation (RI)** - the IRP- or CERCLA-related process to determine the nature and extent of the problem posed by a release or threatened release.
- **Remedial Project Manager (RPM)** - the Army official responsible for overseeing remedial responses at IRP sites in accordance with the National Contingency Plan, Section E, and Army policies.
- **Remedial Response** - a long-term action that stops or substantially reduces a release or threatened release of a hazardous substance that is serious, but does not pose an immediate threat to public health and/or the environment.
- **Removal Response** - an immediate action taken over the short-term to address a release or threatened release of a hazardous substance poses a significant threat to public health or the environment.
- **Renovation** - altering in any way one or more facility components. Operations in which load-supporting structural members are wrecked or taken out are excluded.
- **Risk Assessment** - an evaluation performed as part of the remedial investigation to assess conditions at a site and determine the risk posed to public health and/or the environment.
- **Site Close-out** - may occur during several different stages of the cleanup process, depending on the particular site and its circumstances. Regardless of the stage during which close-out occurs, the process could be accompanied by appropriate documentation.
- **Site Inspection** - a technical phase that follows a preliminary assessment designed to collect more extensive information on a hazardous waste site. The information is used to score the site with the Hazard Ranking System to determine whether response action is needed.
- **Structural Member** - any load-supporting member of a facility, such as beams and load-supporting walls; or any nonload-supporting member, such as ceilings and nonload-supporting walls.
- **Third Party Site** - a non-Army site (landfill, recycling facility) to which the Army is alleged to have contributed hazardous wastes directly or through a contractor.

Appendix 16-1

Definitions of EPA Class and Compliance Status of Projects

CLASS I

Project Assessment = HIGH
Compliance Status: CMPA, INOV, ESDP
EPA Class Number 1

Projects required to meet the provisions of assigned compliance agreement or consent order; project required to correct deficiencies found on an EPA or state inspection; other projects needed to come into compliance when statutory/regulatory deadlines have passed.

CLASS II

Compliance Status: ESDF, PSDF
EPA Class Number 2

Project needed to meet future compliance deadlines for which planning must have already started.

CLASS III

Compliance Status: ESRO, ESRE, ESDL, OTHR
EPA Class Number 3

All other projects which, while important, are not related to imminent compliance requirements.

Section 17

HAZARDOUS MATERIALS MANAGEMENT

SECTION 17

HAZARDOUS MATERIALS MANAGEMENT

A. Applicability of this Protocol

This protocol applies to implementing requirements associated with the management of hazardous materials. Most Army installations handle many chemicals and substances that may be considered hazardous if not handled, stored, or used properly. A complete list of chemicals used at Army installations is too lengthy to include in this protocol. Chemicals that have hazardous properties, i.e., toxic chemicals, flammable substances, reactive substances, and corrosive materials are routinely used at Army installations.

This protocol primarily addresses the proper storage and handling of chemicals and the spill contingency and response requirements related to hazardous materials. Oil, pesticides, and asbestos are hazardous materials that require special management practices at Army installations, and are addressed in separate protocols. Radioactive substances and the general category of hazardous wastes also are not included in this protocol. This protocol does not focus on individual hazardous chemicals or substances used at Army installations. It deals with the generic requirements and good management practices (GMPs) associated with minimizing effects on the environment due to spills or releases of hazardous materials due to improper storage and handling. Most sections of this protocol will be applicable to most Army installations.

B. Federal Legislation

- The U.S. Environmental Protection Agency National Oil and Hazardous Substances Pollution Contingency Plan under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, 40 CFR 300, also known as the National Contingency Plan (NCP), provides the framework for implementing response actions in accordance with the statutory requirements of CERCLA and the spill provisions of the Clean Water Act.
- The Hazardous Materials Transportation Act, which is administered by the U.S. Department of Transportation (DOT), regulates the shipping, marking, labeling, placarding, and recordkeeping requirements for hazardous materials listed in 49 CFR 172.101. Since most Army installations are not shippers of hazardous materials, but use commercial transportation firms for this purpose, the require-

ments of these DOT regulations may not be applicable. However, those Army installations that do ship hazardous materials either by vehicle or by aircraft do have responsibilities for compliance with the DOT regulations.

- USEPA also regulates some special hazardous materials under the Toxic Substances Control Act (TSCA), particularly polychlorinated biphenyls (PCBs) (40 CFR 761) and asbestos (40 CFR 763). These materials are covered in separate protocols, however, and will not be discussed here (see Sections 8 and 13 of this manual).
- Occupations Safety and Health Administration's (OSHA's) Safety and Health Standards are specified in 29 CFR 1910, and govern storage and handling of flammable and combustible liquids. Even though not considered strictly as environmental regulations, they are included in this protocol because they are considered to be an integral part of a total program for hazardous materials management.
- USEPA regulates underground storage tanks used to contain petroleum and other hazardous materials as a result of 1984 amendments to the Resource Conservation and Recovery Act. The underground storage tank regulations are contained in 40 CFR 280 (See Section 6, RCRA, Subtitle I, for information on Underground Storage Tank).
- The National Fire Code, the Flammable and Combustible Liquids Code NFPA 30, prohibits the storage of Class I and Class II liquids in plastic containers in general-purpose warehousing.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with all Federal, state, and local environmental regulations. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities it funds meet Federal, state, and local environmental requirements or to correct situations that are not in compliance with such regulations. In addition, the Executive Order requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Requirements

Hazardous materials are not usually regulated on the state level. However, local agencies (county/ city fire departments) will normally require flammable/ combustible materials to meet certain storage requirements. Usually,

these local ordinances will follow the National Fire Protection Association (NFPA) Fire Protection Guide on Hazardous Materials (Pamphlets 325A, 325M, 49, 491F and 704M).

D. DoD Regulations

- Department of Defense (DoD) 4145.19-R-1, Chapter 5, Section 4, *Hazardous Commodities*, provides overall guidance for storage and handling of various types of hazardous commodities at Army installations. It functions as implementing guidance of the DoD for the OSHA 29 CFR 1910 regulations noted above.
- DoD Instruction 6050.5, *Hazardous Material Information System*, authorizes the Publication of DoD Instruction 6050.5-M, *Hazardous Material Information System Procedures*, which describes the procedures for collection, maintenance, and dissemination of hazardous material data.

E. U.S. Army Regulations

- Army Regulation (AR) 200-1, *Environmental Protection and Enhancement*, Chapter 5, *Hazardous Material Management Program*, implements the Army program to minimize hazards to public health and damage to the environment. It provides guidance for the management of hazardous materials including storage and disposal.

F. Key Compliance Requirements

- Hazardous Materials Transportation - Army installations that ship hazardous materials off-post must comply with regulations regarding packaging and labeling. Depending on the type of hazardous materials transportation activity at the installation, certain sections of 49 CFR 171-173, *Transportation of Hazardous Waste*, will apply.
- Hazardous Substance Release Reporting - Army installations are required to notify USEPA and appropriate state agencies when a release of a reportable quantity of a hazardous substance occurs. *Release* includes any discharge, spill, or leak to air, water, or land, as stipulated in 40 CFR 302.
- Storage and Handling of Hazardous Materials - Army installations that store or handle hazardous materials, such as flammable/ combustible materials, acids,

caustics, compressed gases, oxidizers, etc., are required to comply with facility storage requirements and operational procedures as stipulated in DoD 4145.19-R-1. Effective 1 Sep 90, Class I and Class II liquids in plastic containers may not be stored in general-purpose buildings.

G. Responsibility for Compliance

- Director of Logistics (DOL) has primary responsibility to receive, store, and issue all hazardous commodities. DOL reviews all items that have a potential health hazard and determines if an issue exception code should be assigned to the item before being placed in storage. The receipt of hazardous materials with the proper documentation and shipping papers is also the responsibility of DOL. The proper maintenance and operation of flammable/ combustible materials storage facilities, acid storage facilities and compressed gas storage facilities is also the responsibility of DOL. DOL ensures all hazardous materials are properly labeled.
- Medical Department Activity (MEDDAC)/ Medical Center (MEDCEN) is responsible for reviewing the issue exception codes for hazardous materials assigned by DOL, and approving or disapproving the recommendations.
- Directorate of Engineering and Housing (DEH) is responsible for the storage and handling of all hazardous materials in properly designed facilities. DEH is also responsible for reporting releases of reportable quantities of hazardous substances to USEPA and appropriate state authorities.
- Installation Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department is responsible for making periodic fire safety inspections of flammable/ combustible storage and handling areas on the installation.
- Safety Officer is responsible for conducting work place safety evaluations and inspections of the handling and storage of hazardous materials. The Safety Officer provides the appropriate manager with a report of findings and recommended corrective actions. The Safety Officer is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.

H. Key Compliance Definitions

- *Approved* - listed or approved by Underwriter's Laboratories, Inc., Factory Mutual Engineering Corporation, The Bureau of Mines, National Institute of Occupational Safety and Health, The American National Standards Institute,

The National Fire Protection Association, or other nationally recognized agencies that list, approve, test, or develop specifications for equipment to meet fire protection, health, or safety requirements.

- **Basement** - any portion of a building that is below ground level.
- **Boiling Point** - the temperature at which a liquid starts to boil when at atmospheric pressure (14.7 pounds per square inch absolute (psia), as determined by ASTM test D-86-72).
- **Closed Container** - a container sealed with a lid or other closing device to prevent liquid and/ or vapor from escaping at atmospheric temperatures and pressures.
- **Combustible Liquid** - a liquid having a flashpoint at or above 100 °F (37.8 °C). Combustible liquids are categorized as Class II or Class III liquids and are further subdivided as follows:
 - 1) Class II liquids are those having a flashpoint at or above 100 °F (37.8 °C), and below 140 °F (60 °C).
 - 2) Class IIIA liquids are those having flashpoints at or above 140 °F (60 °C), and below 200 °F (93.4 °C).
 - 3) Class IIIB liquids are those having flashpoints at or above 200 °F (93.4 °C).
- **Flammable Aerosol** - an aerosol that is required to be labeled "Flammable" under the Federal Hazardous Substance Labeling Act (15 USC 1261). These aerosols are considered Class IA liquids.
- **Flammable Liquid** - a liquid with a flashpoint below 100 °F (37.8 °C) with a vapor pressure not exceeding 40 psia at 100° F (37.8 °C). Flammable liquids are categorized as Class 1 liquids, and are further subdivided as follows:
 - 1) Class 1A are those that have a flashpoint below 73 °F (22.8 °C) and boiling point below 100 °F (37.8 °C).
 - 2) Class 1B are those that have flashpoints below 73 °F (22.8 °C) and boiling points at or above 100 °F (37.8 °C).
 - 3) Class 1C are those that have flashpoints at or above 73 °F (22.8 °C) and boiling point below 100 °F (37.8 °C).

- **Flashpoint** - the minimum temperature at which a liquid gives off vapor in sufficient concentration to form an ignitable mixture with air near the surface of the liquid. Flashpoints are established using several standard closed cup test methods.
- **Good Management Practice (GMP)** - a practice that, although not mandated by law, is encouraged to promote safe operating procedures.
- **Liquid** - any material with a fluidity greater than that of 300 penetration asphalt when tested in accordance with ASTM Test D-5-73. When not otherwise identified, the term "liquid" will include both flammable and combustible liquid.
- **Material Safety Data Sheet (MSDS)** - written or printed material that contains information on hazardous chemicals such as common name, physical hazards, and health hazards, and is prepared in accordance with 29 CFR 1910.1200. These must be maintained and accessible at the installation.
- **Portable Tank** - a closed container having a liquid capacity over 60 gallons and not intended for permanent installation.
- **Pressure Vessel** - a storage tank or container designed to operate at pressures above 15 pounds per square inch gauge (PSIG).
- **Safety Can** - an approved flammable liquid container having a spring-closing lid, spout cover, and other features designed to safely relieve internal pressure and to provide safe storage for the liquid.
- **Storage Refrigerator for Flammables** - a unit designed or modified so that the storage compartment, to include the door, and door frame, meets the requirements for Class 1, Division 1 locations as described in NFPA 70.
- **Unstable Reactive Liquid** - a liquid that will vigorously polymerize, decompose, condense, or become self-reactive under conditions of shock, pressure, temperature, or combinations thereof.

Appendix 17 - 1

Maximum Allowable Capacity of Containers And Portable Tanks

| Container Type | Flammable Liquids | | | Combustible Liquids | |
|--|-------------------|-------------------|-----------|---------------------|-----------|
| | <i>IA</i> | <i>IB</i> | <i>IC</i> | <i>II</i> | <i>II</i> |
| Glass or approved plastic ¹ | 1 pt ² | 1 qt ² | 1 gal | 1 gal | 1 gal |
| Metal (other than DOT drums) | 1 gal | 5 gal | 5 gal | 5 gal | 5 gal |
| Safety cans | 2 gal | 5 gal | 5 gal | 5 gal | 5 gal |
| Metal drums (DOT specifications) | 60 gal | 60 gal | 60 gal | 60 gal | 60 gal |
| Approved portable tanks | 660 gal | 660 gal | 660 gal | 660 gal | 660 gal |

¹ Nearest metric size is also acceptable for the glass and plastic containers listed.

² One gallon of nearest metric equivalent size may be used if metal containers must be avoided because of chemical reaction with their contents.

Appendix 17 - 2

Storage in Inside Rooms

| <i>Fire Protection¹ Provided</i> | <i>Fire Resistance</i> | <i>Maximum Size</i> | <i>Total Allowable Quantities² (gals/sq ft floor area)</i> |
|---|----------------------------|-------------------------|---|
| Yes | 2 hours | 500 sq ft | 10 |
| No | 2 hours | 500 sq ft | 4 |
| Yes | 1 hour | 150 sq ft | 5 |
| No | 1 hour | 150 sq ft | 2 |

¹ Fire protection system will be sprinkler, water spray, or other approved method.

² If metric containers are being stored, use the nearest metric equivalent.

Appendix 17-3

Flammable/Combustible Materials Indoor Container Storage

| Class Liquid | Storage Level | *Protected Storage Maximum per Pile Gallons | Unprotected Storage Minimum per Pile Gallons |
|-----------------|-------------------------|---|--|
| IA | Ground and upper floors | 2,750 (50) | 600 (12) |
| | Basement | Not permitted | Not permitted |
| IB | Ground and upper floors | 5,500 (100) | 1,375 (25) |
| | Basement | Not permitted | Not permitted |
| IC | Ground and upper floors | 16,500 (300) | 4,125 (25) |
| | Basement | Not permitted | Not permitted |
| II | Ground and upper floors | 16,500 (300) | 4,125 (75) |
| | Basement | 5,500 (100) | Not permitted |
| III | Ground and upper floors | 55,000 (1,000) | 13,750 (250) |
| | Basement | 8,250 (450) | Not permitted |

* A sprinkler or equivalent fire protection system installed in accordance with NFPA Standard 30.

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate maximum gallonages.

NOTE 2: Aisles will be provided so no container is more than 12 feet from an aisle. Main aisles will be at least 8 feet wide and side aisles at least 4 feet wide. (Numbers in parentheses indicate corresponding number of 55-gallon drums.)

NOTE 3: Each pile shall be separated from each other by at least 4 feet.

**Appendix 17-3
(continued)**

**Flammable/Combustible Materials
Outdoor Container Storage**

| Class | Maximum per pile (See NOTE 1) (Gal) | Distance be- tween piles (See NOTE 2) (Ft) | Distance to property line that can be built upon (see NOTES 3 and 1) (Ft) | Distance to street, alley public way (See NOTE 4) (Ft) |
|-------|--|---|---|--|
| IA | 1,100 | 5 | 20 | 10 |
| IB | 2,200 | 5 | 20 | 10 |
| IC | 4,400 | 5 | 20 | 10 |
| II | 8,800 | 5 | 10 | 5 |
| III | 22,000 | 5 | 10 | 5 |

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate gallonages.

NOTE 2: Within 200 feet of each container, there will be a 12-foot wide access way to permit approach of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures, and such protection for exposures does not exist, the distances in column 3 will be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not less than 3 feet.

Appendix 17-3 (continued)

Flammable/Combustible Materials Indoor Portable Tank Storage

| Class Liquid | Storage Level | *Protected Storage Maximum per Pile Gallons | Unprotected Storage Minimum per Pile Gallons |
|-----------------|-------------------------------------|---|--|
| IA | Ground and upper floors Basement | Not permitted Not permitted | Not permitted Not permitted |
| IB | Ground and upper floors Basement | 20,000 Not permitted | 2,000 Not permitted |
| IC | Ground and upper floors Basement | 40,000 Not permitted | 5,500 Not permitted |
| II | Ground and upper floors Basement | 40,000 20,000 | 5,500 Not permitted |
| III | Ground and upper floors Basement | 60,000 20,000 | 22,000 Not permitted |

* A sprinkler or equivalent fire protection system installed in accordance with NFPA Standard 30.

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate maximum gallonages.

NOTE 2: Aisles will be provided so no container is more than 12 feet from an aisle. Main aisles will be at least 8 feet wide and side aisles at least 4 feet wide. (Numbers in parentheses indicate corresponding number of 55-gallon drums.)

NOTE 3: Each pile shall be separated from each other by at least 4 feet.

**Flammable/Combustible Materials
Outdoor Portable Tank Storage**

| Class | Maximum per pile (See NOTE 1) (Gal) | Distance be- tween piles (See NOTE 2) (Ft) | Distance to property line that can be built upon (see NOTES 3 and 1) (Ft) | Distance to street, alley public way (See NOTE 4) (Ft) |
|-------|--|---|---|--|
| IA | 2,200 | 5 | 20 | 10 |
| IB | 4,400 | 5 | 20 | 10 |
| IC | 8,800 | 5 | 20 | 10 |
| II | 17,600 | 5 | 10 | 5 |
| III | 44,000 | 5 | 10 | 5 |

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate gallonages.

NOTE 2: Within 200 feet of each container, there will be a 12-foot wide access way to permit approach of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures, and such protection for exposures does not exist, the distances in column 3 will be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not less than 3 feet.

Appendix 17-4

Placarding Guidelines

The following table specifies placards that should be used for the transportation of ANY QUANTITY of the listed hazardous material.

| Hazardous Materials Classed or Described As | Placards |
|--|-------------------|
| Class A Explosives | EXPLOSIVES A |
| Class B Explosives | EXPLOSIVES B |
| Poison A | POISON GAS |
| Flammable Solid (DANGEROUS WHEN WET label only) | FLAMMABLE SOLID W |
| Radioactive material | RADIOACTIVE |

RADIOACTIVE

The following table specifies placards that should be used for the transportation of 1000 pounds or more of the listed hazardous materials.

| Hazardous Materials Classed or Described As | Placards |
|--|------------------|
| Class C Explosives | FLAMMABLE |
| Nonflammable Gas | NONFLAMMABLE GAS |
| Nonflammable Gas (Chlorine) | CHLORINE |
| Nonflammable Gas (Fluorine) | POISON |
| Nonflammable Gas (Oxygen, pressurized liquid) | OXYGEN |
| Flammable Gas | FLAMMABLE GAS |
| Combustible Liquid | COMBUSTIBLE |
| Flammable Liquid | FLAMMABLE |
| Flammable Solid | FLAMMABLE SOLID |
| Oxidizer | OXIDIZER |
| Organic Peroxide | ORGANIC PEROXIDE |
| Poison B | POISON |
| Corrosive Material | CORROSIVE |
| Irritating Material | DANGEROUS |

Appendix 17-4
(continued)

Placarding Guidelines

1. Placards should be affixed on both sides, rear, and front of the motor vehicle.
2. Place placards clear of ladders, pipes, and tarps.
3. Placards should be at least 3 inches away from advertising and markings.
4. The "DANGEROUS" placards may be used when a motor vehicle contains two or more classes of hazardous materials requiring different placards. The "DANGEROUS" placard may be used in place of the separate placards for each class.
5. Portable tanks having a rated capacity of 1000 gallons or more must be placarded.
6. Cargo tanks having any quantity of hazardous material must be placarded.
