INTRODUCTION

During the first semester at the Industrial College of the Armed Forces, all students take a course in decision making. One of the lessons in that course required the study of the many different techniques available to the decision maker in structuring his or her approach to solving a particular problem. I remember completing the readings feeling overwhelmed at the number of techniques available and how few of them I had ever used, or even heard of, in my career to date. I wondered if the decisions I had made using the few methods with which I had become familiar could have been improved if I had used another method or technique, one more suited for that situation. Those musings gave rise to an interest in investigating whether other decision makers felt the same way as I and if they were interested in expanding the decision making tools at their command. These musings resulted in my decision to find the answers to these questions through a survey conducted as part of my research project. The scope of the survey had to be pared down as a matter of practicality. In light of the role that ICAF will assume next year as the provider of the senior acquisition course, I concentrated the survey on acquisition program managers, deputies and program executive officers. Hopefully, ICAF would be able to use the findings from the survey to help structure the decision making course for those members of the acquisition workforce who attend ICAF over the next few years.

By way of overview, in the first part of this paper I describe the design and intent of the survey instrument itself.

Following that, I review the findings and then present the final conclusions drawn from this interesting effort.

QUESTIONNAIRE DESIGN

The survey instrument was designed to cover not only the decision making assessments of program managers (PM) and program executive officers (PEO) but to enable a comparison of preferences according to acquisition experience, military department (service), grade or rank, functional background, and size of program. A copy of the instrument is at appendix one.

Part I of Questionnaire

Part One of the instrument surveys general information about the respondent. Service affiliation is the first item on the survey. The reason is fairly obvious. Each military service approaches acquisition from a slightly different angle. The question is: do these service differences extend to decision making as well? Organization and Location items are included to facilitate future study should one want to review decision making differences between or within a particular acquisition organization.

The Position element, or organizational title, is critical to being able to analyze the responses by the various functions within the acquisition community held by the respondents, e.g. contracting officers, engineers, program control personnel as well as PMs and PEO.

The Grade and Skill items are self evident. The Grade field gives the ability to segment the survey into civilian and military respondents as well as into levels of responsibility.

INTRODUCTION

During the first semester at the Industrial College of the Armed Forces, all students take a course in decision making. One of the lessons in that course required the study of the many different techniques available to the decision maker in structuring his or her approach to solving a particular problem. I remember completing the readings feeling overwhelmed at the number of techniques available and how few of them I had ever used, or even heard of, in my career to date. I wondered if the decisions I had made using the few methods with which I had become familiar could have been improved if I had used another method or technique, one more suited for that situation. Those musings gave rise to an interest in investigating whether other decision makers felt the same way as I and if they were interested in expanding the decision making tools at their command. These musings resulted in my decision to find the answers to these questions through a survey conducted as part of my research project. The scope of the survey had to be pared down as a matter of practicality. In light of the role that ICAF will assume next year as the provider of the senior acquisition course, I concentrated the survey on acquisition program managers, deputies and program executive officers. Hopefully, ICAF would be able to use the findings from the survey to help structure the decision making course for those members of the acquisition workforce who attend ICAF over the next few years.

By way of overview, in the first part of this paper I describe the design and intent of the survey instrument itself.

Following that, I review the findings and then present the final conclusions drawn from this interesting effort.

QUESTIONNAIRE DESIGN

The survey instrument was designed to cover not only the decision making assessments of program managers (PM) and program executive officers (PEO) but to enable a comparison of preferences according to acquisition experience, military department (service), grade or rank, functional background, and size of program. A copy of the instrument is at appendix one.

Part I of Questionnaire

Part One of the instrument surveys general information about the respondent. Service affiliation is the first item on the survey. The reason is fairly obvious. Each military service approaches acquisition from a slightly different angle. The question is: do these service differences extend to decision making as well? Organization and Location items are included to facilitate future study should one want to review decision making differences between or within a particular acquisition organization.

The Position element, or organizational title, is critical to being able to analyze the responses by the various functions within the acquisition community held by the respondents, e.g. contracting officers, engineers, program control personnel as well as PMs and PEO.

The Grade and Skill items are self evident. The Grade field gives the ability to segment the survey into civilian and military respondents as well as into levels of responsibility.

The Skill Identifier was included in case the entries in the position element were not precise enough for an automated query routine. If skill codes were available, then an analysis of decision making preferences by skill group could be conducted.

The next field required the respondents to identify the total program cost (research and development as well as procurement funds) over all the years the system is in production. The four categories were \$1 Million, \$10 Million, \$100 Million and over \$100 Million. As it turned out these values were too low. Almost every response valued their program at over \$100 Million. Consequently, this element did very little to segment the responses for analysis based on size of the program. If a survey of this type is reaccomplished, the top category should be increased to \$100 Billion.

The last field in Part One deals with the overall experience of the respondent. As used in the survey, experience level equates to the number of the different acquisition phases the respondent has gone through previous to the one to which currently assigned. This information allows for correlating decision making requirements and assessments to the experience of the respondent. The inclusion of this field also provides for a later opportunity for relating decision making aspects to particular acquisition phases.

Part II of Questionnaire

This part constitutes the heart of the questionnaire. Question one requires the respondent to assess the quality of the decision of his or her subordinate(s). The question asks for the

assessment to be made on the basis of timeliness and creativity. The ratings are Poor, Fair, Good and Excellent. The second question is identical to the first with the exception that, in this case, the respondent assesses the quality of his or her own decisions.

The next section is designed to determine what the respondent considers to be the major problem with the decisions which they and their subordinates make. Six problem areas are listed to help the respondent begin to identify impediments.

- (1) Not enough time
- (2) Lack of credible information
- (3) Lack of truly innovative approaches/courses of action
- (4) Lack of confidence in the accuracy of the decision
- (5) Poor acceptability of decision by superiors
- (6) Difficulty achieving consensus or support

An "Other:" category was provided to capture those additional impediments experienced by the respondents which were not included in any of the choices listed.

The fourth question attempts to determine which phase of the problem solving/decision making process is the most difficult: Problem Definition, Alternative Generation, Evaluation, Selection or Implementation. This question was included so that if a decision support system was generally thought to be beneficial, the developers of the system could concentrate their efforts on the part of the process in which acquisition executives were having the most trouble. The five phases of problem solving used in the survey were taken from Van Grundy's book on decision making techniques.¹ Each phase was to be scored with a number

ranging anywhere from "5", most difficult, to "1", least difficult, depending on the degree of difficulty typically encountered in that phase compared to the others.

The fifth question was designed to locate which of the functional areas within a normal program manager office needed the most improvement in the quality of its decisions or in its decision making process. The survey listed these five functional areas for evaluation:

Engineering

Contracting

Program Control

Logistics

Administration

As in some of the other questions, this one also included an "Other" option in the event some of the program offices were organized differently or either the respondents wanted to comment on decisional weaknesses noted in supporting offices outside their direct responsibility.

Question six marks a major change in the direction of questioning. The previous questions were designed to determine the quality of decision making within acquisition offices and to locate and prioritize the decision phases and functional offices where improvement was deemed most needed. The next three questions (six through eight) are aimed at assessing the utility and acceptance of a decision support system.

Question six asks respondents to say whether or not having a greater range of decision making techniques would enable them to improve the quality of their decisions. The idea behind this

question is to test the hypothesis that decision makers in the acquisition community were not satisfied with the decision tools they brought with them from other programs or found available at their current one. If the respondent answered "Yes" to this question then he or she was to go to the next question.

Those answering question seven have already indicated that they believe that a greater number of candidate decision making techniques to choose from when facing a problem would improve the quality of their decisions. The question now is how much of an improvement would they expect to gain from having this expanded array of techniques available at hand. The options to choose from in answering this question are: Significant, Marginal or None. This question, necessarily hypothetical, was included to give future decision support system developers a sense of potential benefits that the various groups within the acquisition community would gain from their product. This way, the development of a decision support system could be tailored to benefit the segment that seemed to need the system, to want it most and to be able to derive the greatest payback from it.

The last of the utility related questions, question eight, asks the respondent to indicate their assessment of the utility of an automated decision support system that would help them structure their decision making process. The choices here are: Very, Moderately, Slightly and None. If there is a large show of support for this type of system, then work could begin on defining such a system around the demographics and preferences identified by the survey. A possible coalescence of this effort and the Defense Systems Management College's development of the

Program Managers Support System could be envisioned in the next few years.

The questionnaire concludes with a opportunity for the respondents to provide a overview of the decision making techniques they have used and how often they used them. The techniques were arrayed by problem solving phases and ranged from the tried and true methods such as Pro/Con to the esoteric techniques of Nonlogical Stimuli and Free Association. The primary reason for including this question was to measure the level of sophistication in decision making of the respondents. If the majority of decision makers surveyed reported that they were already using all the techniques yet responded that they believed there was room for significant improvement in their office's decision making process, then one would be led to conclude that additional techniques would not be the answer we are looking for here.

The questionnaire includes a Comment section to capture those ideas and suggestions that respondents felt inclined to provide. The section was included primarily to conform to good survey practice. I did not actually anticipate that the section would be used often. As it turned out, I was very mistaken. More than half the respondents included comments, some very lengthy and impassioned. It seems as if decision making and automated decision support systems is of real interest to those in the acquisition community.

SURVEY RESULTS

Demographics of Survey Respondents

The mailing list which I used to address the survey was provided by the Defense Systems Management College's Department of Research. The list is included at Appendix Two. I used only 840 of the 1157 individual organizational addresses contained on the list. These 840 addresses were taken exclusively and exhaustively from the PEO (Program Executive Officer), the PM (Program Manager), the PROCEN (Procurement Center) and the SYSCOMS (System Commands) categories of the mailing list. At the time of this analysis, I had received 331 survey replies. One hundred and forty five to these replies came from program office staff members officers. These replies were not included in the database since my target group was limited to program managers, their deputies, and PEOs. So I ended up building the survey database and drawing my conclusions on the basis of the responses provided by the 186 PMs, DPMS or PEOs.

Breakout by Service. As you can see from the figure below,

Survey Responses by Service

Figure 1

almost 70% where from the Army, many of which were from the

numerous, small project offices at Fort Monmouth and the Redstone Arsenal. This percentage coincides with the proportion of Army addresses on the mailing list. However, it does not coincide with the relative size of the Army's acquisition budget vice those of its sister services. Afraid that this lopsided representation might skew the results to the point that conclusions and generalizations drawn from the survey would be invalid, I chose one question to see if the individual service distributions of responses generally matched to that of the total populations. The question I used as my test case was the assessment of the quality of the respondents own decision making results. The distribution for the individual services evidenced the same 3-to-1 ratio of Good decision makers to Excellent decision makers as will be shown in Figure 6 for the population total. Thus, I judged that it was safe to conclude that the distributions for the other questions would generally conform to this same pattern and would thereby permit us to draw valid conclusions from the trends found in the aggregate populations. The following charts which contain service breakouts also generally support this assumption.

Breakout of the Military/Civilian Mix by Grade. The figure below shows the military/civilian mix (112 military/74 civilians) by grade.

Population by Grade or Rank
Figure 2

Breakout by Position. One hundred and seven replies were from PMs, 77 were from DPMs and 2 were from PEOs.

Population by Position
Figure 3

The 77 DPMS correlates well with 74 civilian replies and indicates that the vast majority of the civilian respondents are DPMS, as would be expected. The two PEOs were Air Force flag officers.

Breakout on the Basis of Program Budget. This field was included so I could make a correlation, if any existed, between the size of the program managed and the program office's decision making requirements. As mentioned previously, I set the dollar value of the choices in the survey much too low; the range in the survey being from between \$1 million to \$100 Million. As a result, all but a few of the responses indicated that their program has a total procurement and R&D budget in excess of \$100 Million. Thus almost everyone ended up in the top block; giving me no way to discriminate between them on the basis of program value. Should someone have an interest in redoing the survey, this field should be changed to include a top category of: Greater than or equal to \$100 Billion.

Level of Experience. This last of the general background information questions attempts to determine the breadth of experience of the respondents. The thought being that if the respondents were new program managers whose previous experience had been limited to working in only one or two phases of the acquisition process, then they might have a tendency to be less confident in their own decision making abilities and thus rely more on a decision support tool or technique. As is shown in the next figure, the workforce sampled turned out to be professionally mature.

Breadth of Experience
Figure 4

Almost 60% of the respondents had previous experience in three or more different phases and the largest single group had gone through all five of the phases prior to their current assigned program. One would assume that, since this is the case, the surveyed population, as a whole, would tend to be less dependent on a support tool and thus be inclined to minimize its value to them.

Decision Making Assessments

With this section, we come to the heart of the research itself. We will investigate what the principal players in the acquisition community think regarding the quality of their own and their subordinates decision making process, what acquisition phase is most troublesome to them, what functional area would benefit most from improvements in decision making and, lastly,

what they believe to be the utility and acceptability of an automated decision support system. The answers to this question should provide system developers clear direction to take in pursuing a decision support tool for the acquisition principals.

Subordinate Decision Quality. In this question the respondents were asked to rate the quality of their subordinates decisions. The categories were: Excellent, Good, Fair and Poor. The distribution across the surveyed population is contained in Figure 5.

Self-Assessment of Decision Quality. The self-assessment is structured exactly like the question on subordinate decision quality except that the respondent now assesses the quality of his or her own decisions. As could have been anticipated, the principals consider their own decisions better than those of their subordinates. Possibly the most interesting aspect of the responses is how closely the principals equate the quality of their own decisions to those of their subordinates, i.e., that

the margin of superiority is not any greater than indicated.

Self Assessed Decision Quality

Figure 6

The respondents show a solid sense of satisfaction with their decision making abilities and processes. Room for improvement? Yes, as indicated by some who rated their decisions and others as only FAIR in quality. But, there are just as many who say that the process yields "Excellent" results. One would imagine these as being very resistant to attempts to improve or fix something that, in their minds, is not broken in the least.

Relationship of Experience with Decision Quality. The premise of this analysis was to see if there is any relation between experience and self assessed decision quality. If so, then one would anticipate seeing a relatively high per cent of inexperienced respondents (management experience in two or less different acquisition phases prior to current assignment) rating themselves as Fair. As borne out by Figure 7,

Experience Levels of FAIR D/Makers

Figure 7

the number of respondents who assessed themselves as being only FAIR decision makers and who had relatively little experience is almost the same as those who had a lot of experience. This unusual bi-modal distribution would seem to frustrate our hypothesis and lead us to conclude that decision making skill may not be highly correlated to previous experience, at least in the case of acquisition principals. The FAIR decision makers were used in this analysis since it is assumed that they would be the most likely segment in our population to benefit from and use a decision support tool or instrument. You might say that these individuals constitute the primary subset of our target group.

Barriers to Making Quality Decisions. Given that the surveys indicate that there is room for improvement in acquisition decisions, the question now is to find out how and where to make the improvements. The following figure details how the principals answered when asked to identify the primary difficulty or barrier to consistently making "Excellent"

decisions. Due to the small sample size of PEOs, the figure focuses on just the PM and DPMs and shows the number of times the particular difficulty is cited as the prime culprit in making quality decisions.

Problems in Making Excellent Decisions
Figure 8

Ideation, as used in the context of this figure, means "Lack of truly innovative approaches/courses of action" as alternatives to select from in solving a problem.

Not surprising, too little time and too little good information are frequently identified as problems by those surveyed. Interestingly enough, though, "consensus" (or lack thereof) is cited almost as often as "time" and "information" as being a major problem in decision making. PMs used an "Other" category 18 times; DPMs, 16. There was no consistent problematic theme identified in those write-ins so I did not incorporate any

of those barriers in the analysis. As for the two PEOs, Time and Ideation where the problem areas they identified.

Relative Difficulty of the Phases of Problem Solving. The previous question instructed us as to what impediments we needed to focus on, now we need to discover which of the decision making/problem solving phase(s) need the most help. The data from the survey suggests that the initial phase, Problem Definition, and the last phase, Implementation, are both the least and most difficult ones. My guess as to why this is so is that for every person who invested the requisite up-front effort to clearly identify the problem and thus found the implementation fairly straight forward, there is one who misjudged the real problem and thus found the implementation step hopelessly ineffectual. It is at these starting and ending points where the real world impinges directly on the decision process. It is at these points that rewards and consequences of good and bad decisions are most directly dealt with. Everything in between is rationalistic abstraction and can be carried on with relative ease. Therefore, from a system development viewpoint, I would take it that improvement design should concentrate on the front and back ends of the decision making process.

Difficulty of Decision Phases

Figure 9

Functional Areas Identified as Needing the Most Improvement.

The last aspect of the acquisition community that we need to analyze in order to determine the direction we go in providing assistance to acquisition decision making process are the various functional components of a program office. Each person surveyed was asked to indicate how much improvement was needed in the engineering, contracting, program control, logistics, and administration functional areas within a program office. The choices were: significant, marginal or none. The distribution of these ratings was fairly uniform across all functional areas. Significant improvement was indicated of being necessary approximately 35% of the time; Marginal improvement, 50%; and None, 15%. Program Managers and Deputies identified the engineering and logistics functions as requiring significant improvement a little more often than the other functions. If you had to prioritize what areas toward which to target any

subsequent decision support system, it would certainly be to these functions.

Functions by Amt. Improvement Required

Figure 10

A blank block was included to capture the data for those functions outside the program office that, according to the respondents experience, was decisionally deficient. In the cases where this blank was filled in, the usual entry was the Legal Office.

Interpolation of Findings. The first conclusion that we can make is that the acquisition principals, for the most part, are at least satisfied with the quality of decision making with their organizations. Room for improvement was indicated, but not with a sense of urgency that would suggest that they thought of this as a major problem area. However, the improvement needed, as slight as it may be, will not, in all cases, come as program managers gain more experience.

The survey results indicate that to maximize the utility of a decision support system in meeting the expressed needs of

acquisition principals, the system would have to, above and beyond all else, help them make decision in a shorter amount of time, help build a greater level of consensus among the decision participants, and assist the decision maker in getting the right amount of relevant and accurate information.

Also, any resulting system should be optimized to help deal with the problems peculiar to the problem definition and implementation phases of decision making.

Lastly, the need for improvement is pervasive in that all the functional areas within a program office were cited by around 25 to 30 per cent of the respondents as needing some sort of improvement. However, to maximize near-term benefits, a decision support system should focus on engineer and logistician type of problem sets since these were ranked slightly higher than the other areas in term of needed improvements.

Utility of an Automated Decision Support System

Having acquired a sense of where and to what extent decision making could be improved, the question now is to determine the degree to which the acquisition community sees utility in a decision support system that introduces additional techniques for acquisition principals to incorporate in their problem solving processes. My analysis will break out the responses to the last remaining three questions on the survey by service, by position and by experience. These answers should give us clear direction as to whether there is any cost effective benefit to be derived in developing an automated decision support system.

Utility of Additional Decision Making Techniques. Simply stated, the respondents said whether or not additional techniques would help them make better decisions. A slim majority, 55%, indicated that it would. This same slight majority exists for all services (except for the Marine Corps), positions and experience levels, as shown below. The statistically small Marine Corps sample size (3 responses) limits our ability to draw too strong of an inference from their inputs, but their replies are included, nonetheless, to complete the record.

Improving Decision thru Add. Technique
Figure 11

Add. Techniques by Position
Figure 12

Add. Techniques by Experience

Figure 13

In the chart above, "Seasoned" means that the respondent has had experience in three or more different acquisition phases;

"Rookie" means the respondent has had experience in two or less phases.

Consequential Improvements from Additional Techniques.

Given that the respondent answered the previous question in the affirmative, the next question asks what amount of improvement he or she would anticipate achieving through the use of new decision making methods. The choices given to the respondents were:

Significant, Marginal and None. The "None" category was included as a logic check on the replies. If a person had indicated in the above question that they felt that having additional decision making techniques available to them would improve the quality of their decisions, then it would be contradictory to say in the next question that they anticipated NO improvement from those additional decision making aids. To the credit of those who answered the survey, no one fell into this trap, raising the

level of credibility of the answers. On an aggregate basis, 42% of the respondents thought that "Significant" improvement could be achieved through enhanced decision methods. The next figure breaks this aggregate measure into its service components. Bear in mind that this figure is based exclusively on the population of those 102 respondents who have already agreed that additional techniques would improve their decisions.

Levels of Anticipated Improvement

Figure 14

Benefit of a Automated Decision Support System. Lastly, the crucial question for us in terms of systems development. Do the acquisition principals see any utility in having an automated decision support system at their disposal to assist in making acquisition related decision. If so, how much help would they believe it to be: Very (Beneficial), Moderately, Slightly or None. Fifteen per cent of those responding thought an automated approach would be VERY beneficial; 41% believed the proposed

system as MODERATELY helpful, with SLIGHTLY helpful coming in at 35% and NONE at 13%. This last chart shows the results of this question by Service.

Expected Benefit of Decision System

Figure 15

The ambivalence is difficult to interpret. Half the population says that such a system would be at least moderately helpful, while the remaining half believe the advantages would be only slightly beneficial at best.

CONCLUSIONS

The question that launched us into this investigation was whether or not acquisition principals thought that additional decision making methodologies and techniques would help them make higher quality decisions. After sifting through the survey responses I found that, by a very small margin, these executive did believe

that additional techniques would be at least marginally helpful to them. Twenty-two per cent of the population thought that "significant" benefits would be gained by doing so. However, only 15% of the surveyed population believed that having these decision making techniques incorporated into the form of an automated decision support system would be useful. I think those two facts highlight the ambiguity that is discernible throughout the survey: yes, we could do and want to do a better job of making acquisition decisions, we are even open to trying new techniques, but we are more that just a little reluctant to resort to an automated decision support system to help us in that improvement process. Such a system is apparently viewed as a potential threat to the program managers and executive officers control over the program and a waste of time since many PMs decisions are ultimately overturned for political reasons by their headquarters, DoD or Congress. Understandably, they would be resistant to any system so perceived. The comments, which many respondents provided, amplified this concern. Typical of these is this one, made by an Air Force Colonel Program Manager;

"Biggest problem is that Prog Dir(ector) 'Decisions' on important issues always are reviewed. Too central a process. Prog Dir do not have the authority (nor do they accept the responsibility) to make tough decisions. Therefore, formal decision making tools, however accurate, will not be used because the answers will be challenged and changed for reasons external to the process."

Likewise the comments of an Army Lieutenant Colonel Product Manager;

"Product and program managers decision making process is a continuous process that in reality does not lend itself to any automated "expert" system. The process of program management is dynamic, without finite data/alternative. If a system is developed it would only be another very small input to the PMs thought process. Those PMs who might come

to rely heavily on such a system are or will soon lose touch with the "Big Picture".

The aversion to a decision support system seems to come from the fact that most respondents assumed this system to be large, cumbersome and time consuming. A small expert system running on a personal computer that avoided these characteristics just might have a chance at winning the acceptance of this community. Whatever is developed, if anything, must be able to withstand the withering scrutiny of and be immediately beneficial to people who are succeeding in accomplishing what is considered by many as the most complex and demanding management challenge of the 20th Century -- U.S. defense acquisition.

Over \$100 Million

A. What acquisition phases have you been involved in before?

B. What phase is your program in now?

	A (Before)	B (Now)
1. Concept Exploration and Definition	_____	_____
2. Demonstration and Validation	_____	_____
3. Engineering and Manufacturing Development	_____	_____
4. Production and Deployment	_____	_____
5. Operations and Support	_____	_____

Part II - Questionnaire

1. In terms of timeliness and creativity, what is your assessment of the quality of decisions made by your subordinates? (Circle one)

Poor Fair Good Excellent

2. Again, in terms of timeliness and creativity, what is your assessment of the quality of decisions that you make individually or as part of a group? (Circle one)

Poor Fair Good Excellent

3. The classical problem solving/decision making process is made up of the following phases: (A) analysis and definition of the problem, (B) generation of ideas or alternatives, (C) evaluation of alternatives, (D) selection, (E) implementation. From the standpoint of the many decisions and problems you have dealt with as a program manager, rank these phases in terms of the degree of difficulty each presents for you in the decision making process. Rank the least difficult phase as 1, and so on through to the most difficult phase with a rank of 5.

Problem Definition _____ Alternative Generation _____
 Evaluation _____ Selection _____
 Implementation _____

4. How much improvement in decision making/problem solving do each of these functional areas within, or matrixed to, your program office need? (Circle one per functional area)

Engineering	Significant	Marginal	None
Contracting	Significant	Marginal	None
Program Control	Significant	Marginal	None
Logistics	Significant	Marginal	None
Administration	Significant	Marginal	None
_____	Significant	Marginal	None

5. What is the prime difficulty you face in making most of your major decisions?

- _____ Not enough time
- _____ Lack of credible information
- _____ Lack of truly innovative approaches/courses of action
- _____ Lack of confidence in accuracy of decision
- _____ Poor acceptability of decision by superiors
- _____ Difficulty achieving consensus or support
- _____ Other: _____

6. Do you feel that having at your command a greater range of generally accepted decision making techniques would enable you to improve the quality of your decisions?

Yes _____

No _____

7. If you answered yes to question 6, indicate how much improvement you feel could be made by introducing new decision making techniques into the acquisition community? (Circle one)

Significant

Marginal

None

8. How beneficial would it be for you to have an automated decision making/problem solving expert system available to you as part of your program management support system. The expert system would assist you in structuring your decision making process with a series of prompts leading you from problem identification, through search for alternative courses of action to evaluation and selection?

_____ Very

_____ Moderately

_____ Slightly

_____ None

9. The following are techniques specifically designed for assisting managers in making decisions. Please circle the ones with which you personally have had some experience or familiarity. Across from each technique that you circled, indicate under the Frequency column approximately how often you have used that technique. If weekly, mark WK; if monthly mark MO; if quarterly, mark QT; if yearly, then mark YR. If you use the technique on an ad hoc basis, so indicate.

<u>PHASE</u>	<u>TECHNIQUE</u>	<u>FREQUENCY</u>
--------------	------------------	------------------

Generation of Alternatives

Brainstorming	_____
Checklists	_____
Data Base Management Sys Access	_____
Free Association	_____
Nonlogical Stimuli	_____
Statistics	_____
_____	_____
_____	_____
_____	_____

Evaluation and Selection of Alternatives

Advantage/Disadvantage (Pro/Con)	_____
Cost Benefit Analysis	_____
Decision Balance Sheet	_____
Decision Matrix	_____
Goalstorming	_____
Idea Advocate	_____
Intuition	_____
Linear Programming	_____
Panel Consensus	_____
Reverse Brainstorming	_____
Simulation	_____
Weighting System	_____
_____	_____
_____	_____
_____	_____

Implementing Solutions

PERT	_____
Critical Path Method	_____
_____	_____
_____	_____

10. Please add any general comments you have regarding decision making in the acquisition community and your interest in using a decision support system for problem solving/decision making should one become available.

Please return in the attached envelope by 20 Mar 92. Thanks for your cooperation.

APPENDIX THREE

Data Base Information

Survey responses from program executive officers, program managers, and deputy program managers have been entered into a data base using DBASE III PLUS*. The 3.5" floppy disk containing these responses is located at Appendix Four.

The database now contains 212 records vice the original 184 upon which the analysis was performed. This is due to 28 additional responses that arrived after the suspense data and after the report was complete but were entered nonetheless to complete the PEO, PM and DPM replies.

The filename for the survey data base is SKILL.DBF. The form for entering the survey responses into the data base is under the filename SURVEY.FMT. This entry form contains necessary information on how to enter additional survey entries in a manner consistent with those records already entered. To facilitate the entry of subsequent responses, use the SET UP menu and select FORMAT FOR SCREEN. The prompt will lead to the various drive designation associated with your machine. Select B: and then select SURVEY.FMT. From then on, the screen will appear in this special format along with the information needed to enter the information in the correct manner. The next six pages show the six screens used to direct the data entry process:

*The remaining 147 unentered staff responses are on file with Mr John Saunders, Information Resource Management Department, National Defense University, Ft Lesley J. McNair, Washington, D.C. 20319-6000.

ENTRY FORM

Part I

RESPONSE

(3 digit number hand written on each survey reply)

SERVICE:

(Enter 'A ' for Army,
'AF' for Air Force,
'N ' for Navy and
'MC' for Marine Corps)

Organization:

(Abbreviation for the
name of the program, if
included on the response)

POSITION:

(Enter 'PM' or 'DPM' or 'STAFF' as appropriate)

GRADE:

(Enter officer pay grade, e.g., 'O5' or 'O6'; for
civilians enter last digit of series, i.e., 'M' if
GM or 'S' if GS and the two digit grade numeral,
i.e., 13, 14 or 15. For SESS, enter as 'SE4')

SKILL:

(Military skill identifier or Civilian Series Code)

CATEGORY:

(Enter '1' if program funding up to \$1M,
'10' if from \$1M to \$10M, '100' if from \$10M
to \$100M and '101' if over \$100M)

PREVIOUS EXPERIENCE: (Enter a number from '1' to '5' according to the number of different acquisition phases respondent indicates he or she has participated in prior to this current assignment)

CURRENT EXPERIENCE:

(Enter '1' if respondent is currently in Concept Exploration, '2' if in Dem/Val, '3' for Eng and Manufacturing Development, '4' if in Production and Deployment, '5' for Operations and Support, or 'M' for multiple if currently managing more than one program)

Part II

1. Quality of Subordinates Decisions: (Enter 'E', Excellent;
'G', Good;
'F', Fair;
'P', Poor)
2. Quality of Respondents Decisions: (Same as previous question)

3. Primary problem or impediments experienced and/or observed in making acquisition decisions:
(Enter 'TIME' for Not enough time,
'INFO' for Lack of credible information,
'COA' for Lack of innovative approaches/courses of action,
'ACCURATE' for Lack of Confidence in accuracy of decision,
'ACCEPT' for Poor acceptability by superiors,
'CONSENSUS' for Difficult achieving consensus or support,
'OTHER' if none of the above choices is indicated)
4. Rank these phases in problem solving in terms of there relative degree of difficulty. Enter '5' for the Most Difficult phase and so on to '1' for Least Difficult phase.

Problem Definition:
Alternative Generation:
Evaluation of Alternatives:
Selection of Best Alternative:
Implementation of Decision:

5. Indicate beside each acquisition function the amount of improvement in the decision making that each requires.

Engineering: (Enter 'S' for Significant, 'M' for Marginal,
Contracting: 'N' for None)
Program Control:
Logistics:
Administration:

6. Did the respondent indicate that he or she felt that having additional decision making techniques at their would improve the quality of their decisions:

('Y' for Yes, 'N' for No)

7. For those answering Yes in the previous question, how much improvement did they feel would result from introducing and additional decision making techniques:

(Enter 'S' for Significant, 'M' for Marginal,
and 'N' for None)

8. How beneficial did the respondent indicate it would be to have an automated decision support system:
(Enter 'V' for Very Beneficial, 'M' for Moderately, 'S' for Slightly or 'N' for None)
9. Enter a 'W' for Weekly, 'M' for Monthly, 'Q' for Quarterly, 'Y' for Yearly or 'A' for Ad Hoc beside each decision making technique so marked. If the technique was not circled or otherwise marked, leave the space blank.

GENERATION OF ALTERNATIVES

Brainstorming:

Checklist:

Data Base Management System Access:

Free Association:

Nonlogical Stimuli:

Statistics:

EVALUATION AND SELECTION OF ALTERNATIVES

Advantage/Disadvantage: (Enter 'W' if used Weekly,
Cost Benefit Analysis: 'M' if Monthly, 'Q' if
Decision Balance Sheet: Quarterly, 'Y' if Yearly
Decision Matrix: and 'A' if Ad Hoc)
Goalstorming:
Idea Advocate:
Intuition:
Linear Programming:
Panel Consensus:
Reverse Brainstorming:
Simulation:
Weighting:

IMPLEMENTATION OF SOLUTIONS

PERT:

CPM:

OTHER METHODS:

(Abbreviate the name(s) of other techniques listed by the
respondent)
