PREFACE

This report presents the results of an Air Force Occupational Survey of the Diagnostic Imaging career ladder, Air Force Specialty Code (AFSC) 4R0X1/A/B/C. Authority for conducting occupational surveys is contained in AFI 36-2623. Computer products used in this report are available for the use of operations and training officials.

The survey instrument was developed by Chief Master Sergeant Lionel Robertson, Inventory Development Specialist, with computer programming support furnished by Mrs. Jeanie C. Guesman. Mr. Richard G. Ramos provided administrative support. Second Lieutenant Karla K. Rudert, Occupational Analyst, analyzed the data and wrote the final report. This report has been reviewed and approved by Lieutenant Colonel Roger W. Barnes, Chief, Airman Analysis Section, Occupational Analysis Flight, Air Force Occupational Measurement Squadron (AFOMS).

Copies of this report are distributed to Air Staff sections, major commands (MAJCOM), and other interested training and management personnel. Additional copies are available upon request to AFOMS, Attention: Chief, Occupational Analysis Flight, 1550 5th Street East, Randolph AFB Texas 78150-4449 (DSN 487-6623).

RICHARD G. HOWSON, Lt Col, USAF
Commander
Air Force Occupational Measurement Squadron

JOSEPH S. TARTELL
Chief, Occupational Analysis Flight
Air Force Occupational Measurement Squadron

SUMMARY OF RESULTS

1. **Survey Coverage:** The Diagnostic Imaging career ladder was surveyed to evaluate changes in the AFSC 4R0X1/A/B/C career ladder and obtain task and equipment data for use in evaluating training programs. Results are based on responses from 817 members (73 percent of the assigned population). All MAJCOMs are proportionately represented.
2. **Specialty Jobs:** Three clusters and 7 independent jobs were identified in the specialty: Standard Radiology Cluster, Management/Supervision Cluster, Instructor Cluster, Mammography Job, Computed Tomography Job, Magnetic Resonance Imaging (MRI) Job, Nuclear Medicine Job, Angiography Job, Ultrasonography Job, and Supply and Logistics Job. The Nuclear Medicine Job, Ultrasonography Job, and MRI Job are performed primarily by members with the A, B, and C shreds, respectively.
3. **Career Ladder Progression:** Progression in the career ladder follows a typical pattern of technical job focus at the 3- and 5-skill level, and greater emphasis on supervision at the 7-skill level. Nine-skill level members and chief enlisted managers devote all their duty time to managerial functions.
4. **Training Analysis:** Because of the diversity of the career ladder, the Specialty Training Standard (STS) was reviewed using specialty job data. STS items with matched tasks were well supported by survey data. The Plan of Instruction (POI) was also well supported. There are a relatively high number of STS performance coded items with no matched tasks. Training personnel and subject-matter experts (SMEs) should review the unsupported and unmatched STS and POI learning objectives to determine if inclusion in future revisions is warranted.
5. **Job Satisfaction Analysis:** Overall, AFSC 4R0X1/A/B/C members appear to be more satisfied with their jobs than members of a comparative sample of medical career ladder personnel. Furthermore, members of the current sample appear more satisfied with their jobs than personnel surveyed in 1992 (excluding Nuclear Medicine personnel). Job satisfaction data of specific career ladder jobs show members find their work interesting and feel their talents and training are being properly used. Respondents in the Nuclear Medicine Job, Angiography Job, Instructor Job, and Logistics and Supply Job expressed less sense of accomplishment from their work than their counterparts.
6. **Implications:** Currently, members are being reclassified so their shred matches the work they perform. Analysis of career ladder documents indicates the STS and POI are supported by survey data. Training personnel and SMEs should review the unsupported and unmatched STS and POI items to determine if inclusion in future revisions is warranted.

**OCCUPATIONAL SURVEY REPORT (OSR)
DIAGNOSTIC IMAGING
(AFSC 4R0X1/A/B/C)**

INTRODUCTION

This is a report of an occupational survey of the Diagnostic Imaging (AFSC 4R0X1/A/B/C) career ladder conducted by the Air Force Occupational Measurement Squadron (AFOMS). The current Diagnostic Imaging career ladder was created in 1996 with the merger of AFSC 4R0X1 (Radiology) and AFSC 4R0X2 (Nuclear Medicine). This is the first survey conducted on this AFSC since the merger. Survey data will be used to identify current utilization patterns among career ladder personnel and evaluate career ladder documents and training programs. The last OSR published for the AFSC 903X0 (Radiologic Career Ladder) was in September 1992. The last OSR which included Nuclear Medicine was a combined AFSC 903X0, 904X0, 909X0 (Radiologic, Medical Laboratory and Nuclear Medicine) study published in December 1978.

Background

As described in the AFMAN 36-2108 *Specialty Description*, Diagnostic Imaging members operate equipment to produce diagnostic images and assist a radiologist or physician with special procedures. Members prepare equipment and patients for diagnostic studies and therapeutic procedures, perform technical and administrative radiology activities, ensure health protective measures are established and employed, and assist the radiation oncologist.

Personnel operate fixed and portable radiographic equipment to produce routine diagnostic medical images. They use specialized equipment to perform nuclear medicine, mammography, ultrasound, computerized tomography, and magnetic resonance imaging (MRI). Members assist physicians with fluoroscopic, interventional, and special examinations.

They also assist radiation oncologists in radiation treatment of disease. They perform and supervise general diagnostic imaging activities such as mixing film processing solutions, loading and unloading film holders, and reproducing images. Members establish and maintain standards, guidelines, and practices to ensure quality standards are met. They plan, organize, and supervise diagnostic imaging activities.

The technical training school for Diagnostic Imaging Apprentices consists of 2 phases. Phase I, J3AQR4R031 000, is conducted at Sheppard AFB TX and lasts for 70 days. It provides training on the atomic theory, basic electricity, production of X-rays, radiographic technique, radiographic film and chemical processing, radiographically oriented anatomy and physiology,

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

operation of fixed and mobile radiologic equipment, routine and special radiographic positioning, practice and theory of special radiographic techniques, and introduction to special radiographic procedures and the associated equipment.

Phase II, J5ABO4R031 001, is located at designated hospitals and lasts for an additional 190 days. It provides practical clinical training and experience in nursing, orthopedic, and surgical procedures; department administration; film processing and exposure techniques; bedside and surgical radiographic procedures; night emergency call; and proficiency training in radiologic technology and radiation protection.

Members in paygrade E-4 or above, holding the 5-skill level and eligible for testing by ARRT, may attend the Nuclear Medicine Journeyman or Diagnostic Ultrasound Journeyman courses. In order to qualify for the Nuclear Medicine Journeyman course, members must also have 36 months retainability and be eligible to retrain according to AFI 36-2204. Members desiring to attend the Diagnostic Ultrasound course must be recommended by the Chairman, Department of Radiology.

SURVEY METHODOLOGY

Inventory Development

The data collection instrument for this occupational survey was USAF Job Inventory (JI) Air Force Personnel Test 90-4R0-089, dated March 1996. A tentative task list was prepared after reviewing pertinent career ladder publications and directives, pertinent tasks from the previous survey instrument, and data from the last OSRs. The preliminary task list was refined and validated through personal interviews with 23 subject-matter experts (SMEs) at the technical training location and at the following installations:

BASE	UNIT VISITED
Sheppard AFB TX	882 TSS
Sheppard AFB TX	82 MDG/SGSAR
Lackland AFB TX Wilford Hall Medical Center	59 MEDW/PSR
Randolph AFB TX	12 MDG/SGSAR
Tinker AFB OK	72 MDG/SGSAR

The resulting JI contains a comprehensive listing of 742 tasks grouped under 18 duty headings, and a background section requesting such information as grade, major command (MAJCOM) assigned, organizational level, job title, functional area, the type of medical facility assigned, the work schedule, the average number of days "On Call" per month, the average number of days report to duty while "On Call," equipment used or operated, and forms used.

Survey Administration

Base training offices at operational bases worldwide administered the inventory to all eligible AFSC 4R0X1/A/B/C personnel. Members eligible for the survey consisted of the total assigned population excluding hospitalized personnel, personnel in transition for a permanent change of station, personnel retiring within the time the inventories were administered to the field and personnel in their job less than 6 weeks. Job incumbents were selected from a computer-generated mailing list obtained from personnel data tapes maintained by the Air Force Personnel Center, Randolph AFB TX.

Each individual who completed the inventory first completed an identification and biographical information section and then checked each task performed in his or her current job. After checking all tasks performed, each individual rated the tasks checked on a 9-point scale showing relative time spent on that task compared to other tasks performed. The ratings ranged from 1 (very small amount of time spent) to 9 (very large amount of time spent).

To determine relative time spent for each task, all incumbent's ratings are assumed to account for 100 percent of job time. Each individual task rating is divided by the total of all task ratings and then multiplied by 100 to provide a relative percentage of time spent on each task.

Survey Sample

Table 1 reflects the percentage distribution, by MAJCOM, of assigned AFSC 4R0X1/A/B/C (then 4R0X1 and 4R0X2) personnel as of October 1995. The 817 military respondents in the final sample represent 73 percent of the total assigned personnel and 83 percent of the total personnel surveyed. Table 2 reflects the paygrade distribution for these AFSC 4R0X1/A/B/C personnel. The survey sample is considered to be a satisfactory representation of the overall career ladder population.

TABLE 1
COMMAND DISTRIBUTION OF 4R0X1/A/B/C PERSONNEL

COMMAND	PERCENT OF ASSIGNED	PERCENT OF SAMPLE

E-5	26	27
E-6	10	9
E-7	7	7
E-8	1	1
E-9	*	0

* Less than 1 percent

Task Factor Administration

In addition to completing the JI, selected senior AFSC 4R0X1/A/B/C personnel completed a training emphasis (TE) or task difficulty (TD) booklet. These booklets were processed separately from the JIs. The information gained from these task factor data is used in various analyses and is a valuable part of the training decision process.

Training Emphasis (TE): TE is a rating of the amount of emphasis that should be placed on tasks in entry-level training. The 64 senior NCOs who completed a TE booklet were asked to select tasks they felt required some sort of structured training for entry-level personnel, and then indicate how much training emphasis these tasks should receive, from 1 (extremely low emphasis) to 9 (extremely high emphasis). Structured training is defined as training provided at resident technical schools, field training detachments, mobile training teams, formal on-the-job training (OJT), or any other organized training method. Interrater agreement for these 64 raters was acceptable. The average TE rating was 2.21, with a standard deviation of 2.09. Any task with a TE rating of 4.30 or above is considered to have high TE.

4R0X1/A/B/C CAREER LADDER JOBS (N=817)

FIGURE 1

Task Difficulty (TD): TD is an estimate of the amount of time needed to learn how to do each task satisfactorily. The 65 senior NCOs who completed TD booklets were asked to rate the difficulty of each task using a 9-point scale (extremely low to extremely high). Interrater reliability was acceptable. Ratings were standardized so tasks have an average difficulty of 5.00 and a standard deviation of 1.00. Any task with a TD rating of 6.00 or above is considered to be difficult to learn.

When used in conjunction with percent members performing, TE and TD ratings can provide insight into first-enlistment personnel training requirements. Such insights may suggest a need for lengthening or shortening portions of instruction for entry-level jobs.

SPECIALTY JOBS (Career Ladder Structure)

The first step in the analysis process is to identify the structure of the career ladder in terms of tasks performed and the relative amount of time spent on the tasks. The Comprehensive Occupational Data Analysis Program (CODAP) creates an individual job description for each respondent. A hierarchical clustering program then compares all individual job descriptions, locates those descriptions with the most similar tasks and time spent ratings, and combines them to form a composite job description. In successive stages, CODAP either adds new members to this initial group, or forms new groups based on similarity of tasks and time spent ratings.

The basic group used in the hierarchical clustering process is the Job. When two or more jobs have a substantial degree of similarity in tasks performed and time spent performing tasks, they are grouped together and identified as a Cluster. The structure of the career ladder is then defined in terms of jobs and clusters of jobs.

Overview of Specialty Jobs

Structure analysis identified three clusters and seven independent jobs (IJ) in the survey sample (Figure 1). A listing of the clusters and IJs is provided below. The stage (ST) number shown beside each title is a reference to computer printed information; the number of personnel (N) in each stage is also shown.

- I. STANDARD RADIOLOGY CLUSTER (ST037, N=501)
- II. MANAGEMENT/SUPERVISION CLUSTER (ST029, N=96)
- III. MAMMOGRAPHY JOB (ST048, N=18)

- IV. COMPUTED TOMOGRAPHY JOB (ST060, N=32)
- V. MRI JOB (ST080, N=22)
- VI. NUCLEAR MEDICINE JOB (ST072, N=49)
- VII. ANGIOGRAPHY JOB (ST047, N=16)
- VIII. ULTRASONOGRAPHY JOB (ST044, N=37)
- IX. INSTRUCTOR CLUSTER (ST033, N=7)
- X. SUPPLY AND LOGISTICS JOB (ST155, N=5)

The respondents forming these jobs account for 97 percent of the survey sample. The remaining 3 percent did not fall into one of these jobs. Examples of job titles for these people include radiologic technician, radiologic apprentice, quality assurance monitor, health physics technician, radiation therapist, and NCOIC radiation oncology.

Group Descriptions

The following paragraphs contain brief descriptions of the clusters and jobs identified through the career ladder structure analysis. Table 3 presents the relative time spent on duties by members of these specialty jobs. Selected background data for these jobs are provided in Table 4. Representative tasks for all the groups are contained in Appendix A.

I. STANDARD RADIOLOGY CLUSTER (ST037, N=501). This represents the core work of the specialty as 61 percent of the survey respondents are in this cluster. Members of the cluster perform an average of 129 tasks and spend 39 percent of their duty time performing standard radiographic exams of all parts of the body. These are done in the normal radiologic laboratory, as well as in emergency rooms. Members have to position patients properly and determine exposures for the various tissue densities. Members of this cluster are distinguished by the time they spend performing the following tasks:

- perform ankle radiographic examinations
- perform hand radiographic examinations
- perform foot radiographic examinations
- perform finger radiographic examinations
- perform cervical spine radiographic examinations
- perform forearm radiographic examinations
- perform hip radiographic examinations

perform elbow radiographic examinations
perform chest radiographic examinations
perform knee radiographic examinations

Most members of the cluster are involved with the core work of the career ladder, performing standard radiographic examinations. There are, however, two jobs identified in the cluster that are performed by smaller numbers of members. There are Phase II instructors who perform a number of training tasks along with the standard radiologic examinations and other personnel who performed both standard radiographic exams and mammography.

As shown in Table 4, over half the members in the Standard Radiology Cluster are in their first enlistment and range in paygrade from airmen just out of training through E-7. Over a third hold the 3-skill level, while more than half hold the 5-skill level. Very few are senior in skill level or paygrade.

II. MANAGEMENT/SUPERVISION CLUSTER (ST029, N=96). As with nearly all specialties, these are members who spend over half their time performing management, supervisory, and general administrative activities. Most consider themselves NCOICs or Superintendents. They perform the highest average number of tasks (177), and 95 percent of the members reported having supervisory responsibility. The following are tasks which distinguish members of this cluster:

establish performance standards for subordinates
counsel subordinates concerning personal matters
write performance reports or supervisory appraisals •
conduct general meetings, such as staff meetings, briefings,
conferences, or workshops
assign personnel to work areas or duty positions
establish organizational policies, such as operating instructions
(OIs) or standard operating procedures (SOPs)
develop or establish work methods or procedures
develop or establish work schedules
coordinate radiology activities with other medical facility sections

Most members of the cluster have a rather broad job which includes a mixture of technical radiographic and traditional supervisory tasks. Most report the job title of NCOIC or Superintendent. A small group of slightly more senior members focus on only a few supervisory and management tasks and are assigned to a wing-level position.

Figures in Table 4 show these are the most senior members of the specialty, averaging nearly 16 years time in service. They hold the 7-, 9-, and CEM skill levels. They range in paygrade from E-5 through E-9.

III. MAMMOGRAPHY JOB (ST048, N=18). This job is performed by relatively few nonshred members of the specialty. The work is far more focused than the General Radiologic Job as members perform an average of only 78 tasks. What distinguishes this job is the time members spend performing only mammographic activities. This is clearly seen by the following tasks members of this job spend most time performing:

- perform mammograms
- complete magnification radiographs for mammographies
- perform mammographic microcalcification studies
- complete radiographs of mammographic biopsy specimens
- perform coned-down mammographic views
- complete radiographs during mammographic localizations
- complete radiographs during mammographic biopsies

While collectively they average nearly 7 years service, 40 percent are in their first enlistment. Most are in paygrades E-4 and E-5 and hold the 5-skill level.

IV. COMPUTED TOMOGRAPHY JOB (ST060, N=32). The work activities of this specialized job are focused mainly on performing Computed Tomography (CT) activities. However, members also spend time performing such general medical service tasks as interviewing and monitoring patients and preparing instruments. These activities account for the average of 117 tasks performed. The primary focus of the job, however, is clearly shown by the following CT-specific tasks members spend most time performing:

- perform CT brain scans
- perform CT abdominal scans
- perform CT chest scans
- administer IV contrast media during CT scans
- adjust CT scanner gantries
- perform CT paranasal sinus scans
- calculate contrast media dosages for CT scans
- record CT images on film
- perform CT temporal bone scans

This job is performed by members of moderate experience as nearly all hold the 5- or 7-skill level and are in paygrades E-4 and E-5. Only one-fourth report being in their first enlistment.

V. MRI JOB (ST080, N=22). This job is distinguished because the members spend two-thirds of their time performing Magnetic Resonance Imaging activities, more time than members of any other job. This job also includes a fair amount of management and supervisory responsibilities as over half of the members report being in a supervisory role. Representative tasks for this job include the following:

- perform MR brain scans, other than pediatric brain scans
- screen patients for metallic implants prior to MR scans
- perform MR lumbar spine scans
- record MR images on film
- select radio frequency (RF) coils for exams
- perform MR archive procedures
- brief patients concerning MR examination and preparation procedures

Presently, only 3 of the 22 respondents in the job have the C-shred. The work is performed by fairly senior personnel as members in this job have an average of over 10 years in the service; only 19 percent are in their first enlistment. Members are primarily E-4s, E-5s, and E-6s.

VI. NUCLEAR MEDICINE JOB (ST072, N=49). Members with this job were very clearly distinguished as they were essentially the only ones who performed tasks in the Nuclear Medicine duty. The job also includes performing quality control or assurance activities. The focus of the work is shown by the following tasks which distinguish the members with the job:

- perform whole body scan imagings
- perform thyroid imagings
- perform bone scan imagings, other than whole body
- perform pulmonary perfusion imagings
- perform thyroid uptake countings
- dispose of radioactive materials
- calculate nuclear medicine radiopharmaceutical doses
- perform gamma camera daily uniformity floods
- perform gated blood pool imagings
- perform gamma camera high count uniformity floods

Members in this job average over 11 years time in service. No members are in their first enlistment. All have the A-shred, most are in paygrade E-4 and E-5, and over half indicate they have supervisory responsibility.

VII. ANGIOGRAPHY JOB (ST047, N=16). Members in this specialized job spend 75 percent of their time performing specific angiographic activities and general services, such as setting up equipment and connecting monitoring devices to patients. The job is rather focused as personnel perform an average of 72 tasks. Representative tasks for this job include:

- assist in performing arch and carotid angiographies
- set up biplane angiography equipment
- assist in performing abdominal angiographies
- set up radiology step tables for runoff procedures
- assist in performing extremital angiographies, such as peripheral
- record digital angiographic procedures on film
- perform digital subtraction angiographies
- assist in performing angioplasties
- assist in performing percutaneous biliary drainage procedures

Members with this job average 62 months service, 44 percent are in their first enlistment, and most hold the 5-skill level and are in paygrade E-4.

VIII. ULTRASONOGRAPHY JOB (ST044, N=37). This job represents the fourth specialized modality that a relatively small number of respondents perform. The job involves spending 65 percent of duty time performing specific ultrasonography activities. As with the other specialized modality jobs, the work is rather specialized as reflected by the average of 72 tasks performed. The following are representative tasks included in this job:

- perform renal ultrasonographies
- disinfect ultrasound equipment and supplies
- perform color Doppler ultrasonographies
- perform thyroid ultrasonographies
- perform testicular ultrasonographies
- brief patients concerning ultrasonography examination and preparation procedures
- perform biliary system ultrasonographies
- perform aortic ultrasonographies

Members in this job average almost 9 years time in service, and only 16 percent are in their first enlistment. They are primarily in paygrade E-4 and E-5. Nearly half perform supervisory responsibilities. While personnel performing the Ultrasound function should have the B-shred, only 27 percent of the respondents doing the work hold the B-shred. Most in the job are 4R051 and 4R071 "slicks".

IX. INSTRUCTOR CLUSTER (ST033, N=7). Members in this cluster spend nearly 80 percent of their time performing training and management and supervisory activities. The radiographic exams they perform are primarily for training purposes. The job is rather focused as personnel in this job perform an average of 34 tasks, the second lowest average number of tasks performed for a job in this career ladder. Some members in this cluster are Phase II instructors, but most are Phase I instructors assigned to Sheppard AFB TX. Other Phase II instructors are represented in the Standard Radiology Cluster because they indicated they spend more time performing standard radiographic exams than instructing personnel in how to perform the exams. Representative tasks for this cluster include:

- personalize lesson plans
- administer or score tests
- develop lesson plans
- conduct formal course classroom training, other than OJT
- write test questions
- develop training materials or aids
- counsel trainees on training progress
- inspect training materials or aids for operation or suitability
- evaluate progress of trainees

Members in the Instructor Cluster average more than 10 years time in service. Members are primarily in paygrades E-4 through E-6.

X. SUPPLY AND LOGISTICS JOB (ST155, N=5). Members with this job are essentially working outside the specialty as they spend 60 percent of their time performing general supply and equipment activities. The job includes an average of only 31 tasks, the lowest average number of tasks performed for any job in this career ladder. All but one member perform a supervisory role. The nontechnical nature of the work is shown by the following tasks members spend most time performing:

- coordinate supply-related matters with appropriate agencies
- store equipment, tools, parts, or supplies
- initiate letters of justification for supply-related matters
- inventory equipment, tools, parts, or supplies

- maintain medical supply shopping guides
- coordinate orders or requests with facility management personnel
- research information in supply catalogs or indexes
- identify and report equipment or supply problems
- initiate requisitions for equipment, tools, parts, or supplies

Members in this job are somewhat more senior, as they average over 14 years in the service. Paygrades of members range from E-4 to E-7.

Comparison of Current Jobs to Previous Survey Findings

The results of the specialty job analysis were compared to those of the last AFSC 4R0X1 (903X0) Radiologic OSR published in 1992. As shown in Table 5, all jobs in the previous survey except the Radiologic Therapy Job were identified in the current study. Two additional jobs--Mammography and Supply and Logistics--were not previously identified.

TABLE 5

JOB SPECIALTY COMPARISONS BETWEEN CURRENT AND PREVIOUS SURVEYS

Computed Tomography Job	Computerized Tomography Job
MRI Job	Magnetic Resonance Imaging
Nuclear Medicine Job	Not Surveyed
Angiography Job	Angiography Job
Ultrasonography Job	Ultrasound Job
Instructor Job	Instructors Job
Supply and Logistics Job	Not Identified
Not Identified	Radiologic Therapy Job

Summary

The core of the career ladder work is represented by tasks performed by members of the Standard Radiology Cluster. The specialized modalities are represented by the other jobs performed by smaller numbers of respondents. As expected, members with the A-shred were performing the Nuclear Medicine activities. What was unexpected was the number of "slick"

members performing the B- and C-shred Ultrasound and MRI jobs and the number of members with shreds doing standard radiographic duties. This may be because the shred designations had been assigned only shortly before the survey was conducted.

ANALYSIS OF DAFSC GROUPS

An analysis of DAFSC groups, in conjunction with the analysis of the career ladder structure, is an important part of each occupational survey. The DAFSC analysis identifies differences in tasks performed between skill level members. This information may then be used to evaluate how well career ladder documents, such as the AFMAN 36-2108 *Specialty Description* and the Career Field Education and Training Plan, reflect what career ladder personnel are actually doing in the field.

The distribution of AFSC 4R0X1/A/B/C skill-level groups across career ladder jobs is displayed in Table 6. Table 7 offers another perspective by displaying the relative percent time spent on each duty across the skill level groups. Almost all 3-skill level "slick" members perform the Standard Radiology Job, while only one AFSC 4R031B member performed the CT job. Senior members in the career ladder specialize in the various modalities and have increasing supervisory and management responsibilities.

Skill-Level Descriptions

At the time of this survey, only a few AFSC 4R0X1/A/B/C personnel had been designated with the appropriate shred following the merger. Therefore, only small numbers of members with the three suffixes appeared in the sample. Because of this, the shreds will only be briefly discussed at the 5-skill level.

DAFSC 4R031. Three-skill level respondents constitute 25 percent of the survey sample. Most perform the core work represented by the Standard Radiology Cluster and spend the majority of their time performing standard radiographic exams. They also perform or participate in special radiographic procedures and in bedside, surgical radiography, and fluoroscopy. Representative tasks performed by 3-skill level personnel are shown in Table 8.

DAFSC 4R051. Almost half the members in the survey sample hold the shredless 5-skill level. While the majority of 4R051 members perform the work of the Standard Radiology Cluster, they also are involved with some of the more specialized procedures and modalities. Representative tasks performed by 4R051/A/B/C personnel are shown in Table 9. Table 10 shows the tasks

D188 Order or maintain medical supplies	10	31	-21

which best differentiate between 3- and 5-skill level members. Figures show 5-skill level members perform more supervisory tasks, while 3-skill level members perform or participate in more bedside or surgical radiography.

DAFSC 4R051A. There were 42 4R051A members in the sample. Nearly all perform the Nuclear Medicine Job. Only a few were working outside their shred by spending time performing standard radiographic procedures.

DAFSC 4R051B. Of the 23 4R051B members surveyed, only 7 had the Ultrasound Job. Twelve were spending time performing standard radiographic procedures and four were performing the nontechnical Supervisory Job.

DAFSC 4R051C. Only three 4R051C members were included in the study. Two performed the MRI Job and one performed the CT Job.

DAFSC 4R071. Seven-skill level “slick” respondents perform a mixture of technical and supervisory tasks. While over half perform the traditional Supervisory Job, a quarter were doing the standard radiologic procedure. Smaller numbers were involved in the specialized modalities, instructing, and performing supply functions. Representative tasks performed by 4R071/A/B/C members are shown in Table 11. Tasks which best differentiate between all 5- and 7-skill level members are listed in Table 12. Figures show 7-skill level members perform more supervisory tasks, while 5-skill level members perform more technical tasks.

DAFSC 4R090/4R000. There were only seven 4R090 and 4R000 members in the sample, all performing the Management/Supervision Job. As the senior members of the career ladder they spend the majority of their time performing management, supervisory, and general administrative activities. This is shown by representative tasks performed listed in Table 13. Table 14 shows the tasks which best differentiate between 7-skill level and 9-skill level/CEM members. A higher percentage of the senior members perform management tasks.

Summary

Progression in the 4R0X1/A/B/C career ladder follows a pattern of technical job focus at the 3- and 5-skill levels with increased involvement with supervision at the 7-skill level and management at the 9-skill/CEM level. The move from performing standard radiographic exams to specialized modalities is more evident at the 5-skill level. Progression into managerial and supervisory duties occurs at the 7- and 9-skill levels. Nine-skill level members and CEMs devote essentially all their time performing to management functions.

TABLE 11

REPRESENTATIVE TASKS PERFORMED BY 4R071/A/B/C PERSONNEL

TASKS		PERCENT MEMBERS PERFORMING (N=135)
A16	Counsel subordinates concerning personal matters	93
A10	Conduct supervisory performance feedback sessions	85
A5	Conduct general meetings, such as staff meetings, briefings, conferences, or workshops	82
A54	Evaluate personnel for compliance with performance standards	82
A89	Write performance reports or supervisory appraisals	81
A69	Participate in general meetings, such as staff meetings, briefings, conferences, or workshops, other than conducting	80
A65	Inspect personnel for compliance with military standards	80
A42	Establish performance standards for subordinates	79
A2	Assign personnel to work areas or duty positions	74
A7	Conduct self-inspections or self-assessments	74
A41	Establish organizational policies, such as operating instructions (OIs) or standard operating procedures (SOPs)	72
A24	Develop or establish work methods or procedures	72
A17	Determine or establish logistics requirements, such as personnel, equipment, tools, parts, supplies, or workspace	69
A90	Write recommendations for awards or decorations	67
A25	Develop or establish work schedules	66
A66	Interpret policies, directives, or procedures for subordinates	66
A55	Evaluate personnel for promotion, demotion, reclassification, or special awards	66
A12	Coordinate orders or requests with facility management personnel	66
A6	Conduct safety inspections of equipment or facilities	66
A33	Direct administrative functions	64
D176	Identify and report equipment or supply problems	64
A34	Direct patient care activities	64
C124	Administer pregnancy questionnaires	64
A35	Direct training functions	61
B115	Maintain training records or files	60
A59	Evaluate work schedules	60
A62	Initiate actions required due to substandard performance of personnel	60
C127	Compile data for records, reports, logs, or trend analyses	59
A49	Evaluate job-related suggestions	59
A75	Plan or schedule work assignments or priorities	59
A13	Coordinate radiographic equipment replacements	59
C167	Schedule patients for diagnostic imaging procedures	59
D172	Coordinate maintenance of equipment with appropriate agencies	58
C149	Maintain administrative files	57
A36	Draft agenda for general meetings, such as staff meetings, briefings, conferences, or workshops	56
A60	Evaluate workload requirements	56
A88	Write job or position descriptions	56
A48	Evaluate job or position descriptions	56
B102	Counsel trainees on training progress	55
A83	Schedule personnel for temporary duty (TDY) assignments, leaves, or passes	55
A51	Evaluate logistics requirements, such as personnel, equipment, tools, parts, supplies, or workspace	54
A14	Coordinate radiology activities with other medical facility sections	54

TRAINING ANALYSIS

Occupational survey data are one of many sources of information which can be used to assist in the development of training programs for career ladder personnel. Factors used to evaluate entry-level training include duties performed by members across career ladder jobs, distribution of personnel across career ladder jobs, percentages of members performing specific tasks, ratings of how much training emphasis tasks should receive in formal training, and relative TD ratings.

First-Enlistment Personnel

There were 299 respondents in their first enlistment (1-48 months TAFMS), representing 37 percent of the total survey sample. Most first-enlistment personnel work in the Standard Radiology cluster of jobs (see Figure 2). Their focus on performing standard radiographic exams is shown in Table 15, which lists time spent on duties, and Table 16, which lists tasks most first-enlistment members perform. Their focus on performing standard examinations is further demonstrated by the list of equipment used by 20 percent of first-job or first-enlistment personnel is presented in Table 17.

Training Emphasis (TE) and Task Difficulty (TD) Data

TE and TD data are secondary task factors used to help training development personnel decide what tasks need to be emphasized for entry-level training. These ratings, based on judgments of senior career ladder NCOs at operational units, provide a rank-ordering of those tasks considered important for first-enlistment airmen training (TE) and a measure of the difficulty of those tasks (TD). When combined with the data on percentages of entry-level personnel performing tasks, comparisons can be made to determine if training adjustments are necessary. For example, tasks receiving high ratings on both task factors (TE and TD), accompanied by moderate to high percentages performing, may warrant resident training. Those tasks receiving high task factor ratings, but low percentages performing, may be more appropriately planned for OJT programs within the career ladder. Low task factor ratings may highlight tasks best omitted from training of new personnel, but this decision must be weighed against percentages of personnel performing the tasks, concerns of commands, and the criticality of the tasks.

To assist training development personnel, an Automated Training Indicator (ATI) is assigned to each task in the JI. ATIs combine percentages of first-enlistment personnel with TE and TD data to reflect a training decision based on the Training Decision Logic Table found in Attachment 2, AETCI 36-2101. ATIs allow training development personnel to quickly focus their attention on tasks most likely to qualify for the initial resident course.

Tasks with the highest TE ratings are listed in Table 18. Included for each task are the percentage of first-job and first-enlistment personnel performing the task and the TD rating. As shown, most tasks deal with performing standard radiologic exams, bedside and surgical radiography, and special radiographic procedures. Greater than 50 percent of first-job and first-enlistment personnel are performing the listed tasks.

Table 19 lists the tasks with the highest TD ratings. The percentages of first-job, first-enlistment, appropriate skill level personnel performing the tasks, and the TE ratings are included for each task. The majority of tasks rated high in difficulty involve the specialized modalities and are performed by members holding 5- or 7-skill levels.

TABLE 18

4R0X1 TASKS RATED HIGHEST IN TRAINING EMPHASIS

TASKS	TNG EMP*	4R0X1 PERCENT MEMBERS PERFORMING			TASK DIFF*
		1ST JOB (N=86)	1ST ENL (N = 296)

Perform nonstandard MR scans								
Assist in performing ultrasound-guided								
Develop treatment plans using treatment planning equipment								
Develop computer generated preliminary and post plans for brachytherapies								
Perform stereotactic breast biopsies, other than ultrasound-guided								
Perform spectral Doppler ultrasonographies								
Perform carotid ultrasonographies								
Perform organ transplant ultrasonographies								
Perform CT three-dimensional reconstruction images								
Fabricate tissue compensators								
Conduct radiation therapy simulations								
Perform MR gated cardiac scans								
Complete radiographs during mammographic localizations								
Perform echocardiographies for pericardial effusions								
Perform adult cranial shunt ultrasonographies								
Perform MR pediatric brain scans								
Perform MR cine scans								
Perform MR cine scans								
Calculate nuclear medicine radiopharmaceutical doses								
Perform mastoid or petrous pyramid radiographic examinations								
Complete radiographs on patients in traction								
Perform internal auditory meatus radiographic examinations, such as canals								

* Average TD Rating is 5.00

Specialty Training Standard (STS)

The AFSC 4R0X1/A/B/C STS, dated April 1996, was reviewed using occupational survey data. The first step for SMEs to match JI tasks to appropriate sections and subsections of the STS. Then, using the guidance provided in AETCI 36-2601, STS elements were reviewed to determine if matched tasks were performed by at least 20 percent or more of first-job (1-24 months TAFMS), first-enlistment (1-48 months TAFMS), 5-, or 7-skill level group members. Any STS entry with tasks performed by less than 20 percent members of any of the groups is considered to be unsupported by survey data and might not be appropriate for the STS.

The initial analysis of the STS using percent of TAFMS and DAFSC groups performing tasks as the criteria revealed many items were unsupported. Most of these involved the special modalities that relatively few of the total sample are involved with. There were several items in paragraph 12.a, dealing with various checks and quality control activities, that were unsupported. A sample of these unsupported STS entries with criteria group data is presented in Table 22.

Because of the number of unsupported STS entries using standard criterion group data, an additional analysis was performed using percent members of the clusters and jobs as criterion groups. The results were that most tasks matched to the STS paragraphs at far more than 20 percent of 1 job group performing the matched tasks. It is interesting to note line items in paragraph 12.a were still unsupported using members of the jobs. Training personnel and SMEs should review these unsupported STS items to determine if inclusion in future revisions is warranted.

Tasks performed by 20 percent or more of criterion groups, but not matched to any STS paragraphs are listed in Table 21. Training personnel and SMEs should consider these unreferenced tasks to determine if inclusion in the STS is justified.

Plan of Instruction (POI)

The tentative POI J3AQR4R031, dated September 1996, was also reviewed using survey data. Learning objectives with matched tasks performed by 30 percent or more personnel in their first job (1-24 months TAFMS) or their first enlistment (1-48 months TAFMS) are considered to be supported. Objectives matched to tasks performed by less than 30 percent criterion group members should be considered for deletion.

Analysis of the POI showed unsupported learning objectives dealing with characteristics of radiographic film, principles of tomography, and using radiographic technique charts. Examples of the unsupported objectives, along with accompanying JI tasks and survey data are listed in Table 22. Training personnel and SMEs should review these unsupported POI objectives to determine if inclusion in future revisions is warranted. Tasks performed by 30 percent or more of criterion groups not matched to objectives are listed in Table 23. Training personnel and SMEs should consider these unreferenced tasks to determine if inclusion in the STS is justified.

I368 Perform scoliosis radiographic examinations	6.67	18	81	75	4.29

JOB SATISFACTION ANALYSIS

An examination of the responses to job satisfaction questions can give career ladder managers a better understanding of some of the factors affecting the job performance of airmen in the career ladder. Job satisfaction data can be expanded to provide indications of general attitudes within specific DAFSC groups.

Figures in Table 24 compare AFSC 4R0X1/A/B/C TAFMS group data to those of members of all medical career ladders surveyed in 1996. While Diagnostic Imaging personnel are more satisfied with their jobs than members of the comparative sample, they have noticeably lower reenlistment intentions.

An indication of the stability of job satisfaction perceptions within the 4R0X1/A/B/C career ladder over time is provided in Table 25. Figures compare current survey responses to those of the previous survey. Note only figures from the previous AFSC 903X0 are compared. Members of all TAFMS levels are currently more satisfied with the use of their talents and training than before. Reenlistment intentions increased from the previous survey for members with greater than 49 months TAFMS, while the number of members in their first enlistment who plan to reenlist dropped nearly 10 percent.

Finally, job satisfaction data for members of the jobs are provided in Table 26. Generally, job satisfaction data are high for personnel across all identified jobs. Sense of accomplishment gained from work, however, was low for the Nuclear Medicine, Angiography, Instructor, and Logistics and Supply jobs. The Standard Radiology, Mammography, and Computed Tomography jobs had the lowest intentions to reenlist.

Summary

Overall, AFSC 4R0X1/A/B/C members appear to be more satisfied with their jobs than members of a comparative sample of medical career ladder personnel. Furthermore, members of the current sample appear more satisfied with their jobs than personnel surveyed in 1992 (excluded Nuclear Medicine personnel). Job satisfaction data of specific career ladder jobs show members find their work interesting and feel their talents and training are being properly used. Respondents in four jobs--Nuclear Medicine, Angiography, Instructor, and Logistics and Supply--expressed the least sense of accomplishment from their work.

IMPLICATIONS

This survey was conducted primarily to provide training personnel with current information on the Diagnostic Imaging specialty for use in reviewing current training programs and training documents. With the exception of the Nuclear Medicine Job, results indicate the current jobs were performed in the previous survey. The present classification structure has 3 shreds--A for Nuclear Medicine, B for Ultrasound, and C for MRI. Currently, members are being reclassified, so their DAFSC suffix may not match the work they perform.

Analysis of career ladder documents indicates the 4R0X1/A/B/C STS was supported by survey data. The tentative POI, J3AQR4R031, was also supported by survey data. Training personnel and SMEs should consider the unreferenced tasks to determine if inclusion in the STS or POI is justified. Unsupported items or those with no matched tasks should be reviewed to determine if inclusion in future STS or POI revisions is warranted or if more tasks are needed in the JI.

ULTRASONOGRAPHY JOB
ST044

TASKS		PERCENT MEMBERS PERFORMING (N=37)
O581	Perform renal ultrasonographies	100
O549	Disinfect ultrasound equipment and supplies	100
O561	Perform color doppler ultrasonographies	97
O585	Perform thyroid ultrasonographies	97
O584	Perform testicular ultrasonographies	97
O548	Brief patients concerning ultrasonography examination and preparation procedures	95
O556	Perform biliary system ultrasonographies	95
O574	Perform pancreatic ultrasonographies	95
O563	Perform endovaginal ultrasonographies	95
O550	Key patient biographical information into ultrasound computers	92
O583	Perform splenic ultrasonographies	92
O554	Perform aortic ultrasonographies	92
O571	Perform obstetric ultrasonographies	89
O551	Perform abdominal wall ultrasonographies	86
O547	Assist in performing ultrasound-guided needle biopsies or drainages	86
O566	Perform hepatic ultrasonographies	84
O592	Set up equipment and supplies for ultrasonography procedures	84
O578	Perform popliteal ultrasonographies	84
O579	Perform portable ultrasonography examinations	81
O582	Perform spectral doppler ultrasonographies	76
O557	Perform breast ultrasonographies	70
O594	Write summaries of technical ultrasound exam findings	68
O559	Perform carotid ultrasonographies	68
O577	Perform peripheral vascular ultrasonographies	68
O564	Perform femoral ultrasonographies	65
O567	Perform iliac ultrasonographies	65
O593	Sterilize ultrasound transducers	62
O587	Record ultrasonography studies on film	59
O544	Adjust ultrasonography cameras	54
O586	Record ultrasonography studies on digital electronic media	43

PERFORMING
(N=14)

TASKS

B116	Personalize lesson plans	100
B93	Administer or score tests	100
A21	Develop lesson plans	86
B97	Conduct formal course classroom training, other than OJT	86
B122	Write test questions	71
B106	Develop training materials or aids	71
B102	Counsel trainees on training progress	64
B114	Inspect training materials or aids for operation or suitability	64
B111	Evaluate progress of trainees	57
A54	Evaluate personnel for compliance with performance standards	50
B108	Establish or maintain study reference files	50
B115	Maintain training records or files	50
A16	Counsel subordinates concerning personal matters	50
B96	Complete student entry or withdrawal forms	50
B109	Evaluate effectiveness of training programs, plans, or procedures	43
A69	Participate in general meetings, such as staff meetings, briefings, conferences, or workshops, other than conducting	43
B105	Develop performance tests	43
B107	Develop training programs, plans, or procedures	43
B95	Brief organizational personnel concerning training programs or matters	43
B110	Evaluate personnel to determine training needs	43
A65	Inspect personnel for compliance with military standards	36
A10	Conduct supervisory performance feedback sessions	36
A35	Direct training functions	36
B104	Develop formal course curricula, plans of instructions (POIs), or specialty training standards (STSs)	29
A86	Supervise military personnel	29
B117	Plan or schedule training	29
C154	Maintain personnel dosimetry program	21
G290	Test silver recovery units	7

TABLE A10
LOGISTICS AND SUPPLY JOB
ST155

TASKS		PERCENT MEMBERS PERFORMING (N=5)
D173	Coordinate supply-related matters with appropriate agencies	100
D191	Store equipment, tools, parts, or supplies	100
D179	Initiate letters of justification for supply-related matters	100
D182	Inventory equipment, tools, parts, or supplies	100
D186	Maintain medical supply shopping guides	100
A69	Participate in general meetings, such as staff meetings, briefings, conferences, or workshops, other than conducting	100
A12	Coordinate orders or requests with facility management personnel	100
D190	Research information in supply catalogs or indexes	80
D176	Identify and report equipment or supply problems	80
D181	Initiate requisitions for equipment, tools, parts, or supplies	80
A52	Evaluate maintenance or utilization of equipment, tools, parts, supplies, or workspace	80
D178	Initiate documentation to turn in excess or surplus property	80
D189	Pick up or deliver equipment, tools, parts, or supplies	80
A51	Evaluate logistics requirements, such as personnel, equipment, tools, parts, supplies, or workspace	80
C130	Create computerized reports, such as spreadsheet analyses	80
D183	Issue or log turn-ins of equipment, tools, parts, or supplies	80
D184	Maintain benchstock parts or equipment levels	60
D187	Maintain organizational equipment or supply records, such as custodian authorization/ custody receipt listings (CA/CRLs)	60
A17	Determine or establish logistics requirements, such as personnel, equipment, tools, parts, supplies, or workspace	60
D175	Evaluate serviceability of equipment, tools, parts, or supplies	60
A86	Supervise military personnel	60
