PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Health Service Administrators, AFSC 41AX. Authority for conducting occupational surveys is contained in AFI 36-2623. Computer products upon which this report is based are available for the use of operations and training officials.

The survey instrument was developed by Ms. Lauri Odness, Occupational Analyst, with computer programming support furnished by 1Lt Sheon Mendoza and Ms. Becky Hernandez. Ms. Raquel Soliz provided administrative support. Ms. Odness analyzed the data and wrote the final report. This report has been reviewed and approved by Mr. Joseph A. Bergmann, Chief, Management Applications Analysis Section, Occupational Analysis Flight, Air Force Occupational Measurement Squadron (AFOMS).

Copies of this report are distributed to Air Staff sections, major commands, and other interested training and management personnel. Additional copies are available upon request to the AF Occupational Measurement Squadron, Attention: Chief, Occupational Analysis Flight (OMY), Randolph AFB, Texas 78150-4449 (DSN 487-6623).

RICHARD C. OURAND, JR., Lt Col, USAF
Commander
Air Force Occupational Measurement Sq

JOSEPH S. TARTELL
Chief, Occupational Analysis Flight
Air Force Occupational Measurement Sq

SUMMARY OF RESULTS

1. *Survey Coverage*: The Health Service Administrators utilization field was surveyed to obtain current task data for use in evaluating current training programs. One-hundred percent of eligible specialty members of active duty, Air National Guard (ANG) and Reserve Force (RES) were selected as participants. Results for the active duty segment are based on responses from 650 respondents (59 percent of the total personnel selected). Results for the ANG and RES are based on 219 respondents (30 percent of the total personnel selected). All major commands are satisfactorily represented in the survey sample.
2. *Specialty Jobs*: Seven clusters and 5 independent jobs were identified in the active duty career ladder structure analysis. All clusters involve the day-to-day responsibilities of the specialty in a medical facility setting. The 5 independent jobs were categorized as training, recruiting, Surgeon General (SG) support functions, facility planner and TriCare contract management. The technical jobs are quite distinct in a large facility setting, yet in some of the smaller settings individuals perform more than one technical job. The structure analysis for the ANG/RES identified 4 clusters and 3 independent jobs. Personnel in those clusters and jobs are performing many aeroevacuation and personnel management tasks. The AFMAN 36-2105 *Specialty Descriptions* are complete and generally portray the nature of the job.
3. *Career Ladder Progression*: The differences between the DAFSC 41A1, 41A3, and 41A4 are very slight for the active duty, ANG and RES officers. The staff 41A4 officers are performing tasks in the area of Command and Management. The 41A1 and 41A3 active duty officers are performing more technical tasks related to the functional areas in Medical Treatment Facility (MTF) setting, while the ANG and RES officers performed aeromedical evacuation tasks.
4. *Special Issues*: Write-in comments and background questions identified several areas of concern to personnel in the field: establishment of the Objective Medical Group (OMG) with the duties and responsibilities for the administrator versus the squadron commander not clearly defined; dual-hat positions in the MTFs; and training requirements were reported.
5. *Job Satisfaction*: The job satisfaction measures for the active duty survey sample are generally high. Satisfaction was consistent across all but one of the jobs. TriCare Contract Managers found their jobs dull and expressed a low sense of accomplishment in their jobs. The job satisfaction for the ANG and RES respondents was generally high across all jobs.
6. *Implications*: This survey provides accurate information about the tasks being performed in the Health Services Administrator field for active duty, ANG and RES personnel. Personnel were identified in jobs being performed in one or more of the functional areas of an MTF setting or in one of several unique jobs found outside of an MTF. Special issues and concerns of the field were also addressed.

**OCCUPATIONAL SURVEY REPORT (OSR)
HEALTH SERVICES ADMINISTRATORS
(AFSC 41AX)**

INTRODUCTION

This is a report of an occupational survey of the active duty, ANG and RES Health Services Administrators utilization field conducted by the Occupational Analysis Flight, Air Force Occupational Measurement Squadron. The survey was conducted to obtain job and task data. Data collected through this OSR process will be utilized by training development personnel to review courses and related training documents. An OSR has never before been completed for the 41AX officer field.

Background

As described in AFMAN 36-2105, *Specialty Descriptions*, for AFSC 41AX dated 31 October 1995, members: Manage health services activities, including plans and operations, managed care, human resource management, logistics management, patient administration, budgetary and fiscal management, medical manpower, medical facilities management, biometrics, medical recruiting, and aeromedical evacuation. Directing the hospital accreditation program and management improvement studies are also performed.

All active duty members are required to attend course CTSJ30BR41A1001, Health Service Administrator. The course, offered at Sheppard AFB, is 11.5 weeks long with the first 9 weeks in common health service areas and 2.5 weeks in one of the health service functional areas. The ANG and RES personnel attend only certain blocks of the overall course.

Entry into the utilization field requires an undergraduate degree in business administration, management, social science, public health, or other related fields. For the award of AFSC 41A3 completion of the basic health administration course is mandatory with 4 years experience.

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

SURVEY METHODOLOGY

Inventory Development

The data collection instrument for this occupational survey was USAF Job Inventory (JI) AFPT 90-MSC-100, dated February 1996. The inventory developer prepared a tentative task list by reviewing pertinent career ladder publications and directives. This task list was further refined and validated through personal interviews with over 60 subject-matter experts representing a variety of medical facilities at the following locations:

<u>UNIT</u>	<u>LOCATION</u>
59th MG	Lackland AFB
12th MG	Randolph AFB
23rd MG	Pope AFB
23rd AE SQ	Pope AFB
1st MG	Langley AFB
89th MG	Andrews AFB
4th MG	Seymour Johnson AFB
HQ 11 MG	Bolling AFB
648th MS	Brooks AFB
384th TRS/HTSS	Sheppard AFB
AFELM HFO-CR	Dallas TX
HQ RS	Randolph AFB

The resulting JI contained a comprehensive listing of 831 tasks grouped under 14 duty headings. A background section requested such information as: grade, MAJCOM, job title, components to which assigned, time in present job, time in service, job satisfaction, functional area, type of MTF, organizational level, training completed, and number of beds in MTF.

Survey Administration

The survey was sent to each location worldwide and administered to 1,111 eligible active duty, 263 ANG and 467 RES personnel. Personnel excluded from taking the survey were: (1) personnel in transition for a permanent change of station; (2) personnel retiring during the time inventories were administered and (3) personnel in their job less than 6 months. Participants were selected from a computer-generated mailing list obtained from personnel data tapes maintained by the Air Force Personnel Center, Randolph AFB TX.

The survey was administrated under a new methodology developed for the Air Force for obtaining JI information on computer disks. Each individual received a disk with instructions on how to load the inventory. Those individuals first completed an information and biographical section and then started the task section of the inventory. They were asked to indicate each task

performed in their current job. After checking all tasks performed, respondents were only shown those tasks to rate on a 9-point scale showing relative time spent on that task, as compared to all other tasks identified. The ratings ranged from 1 (very small amount time spent) through 5 (about average time spent) to 9 (very large amount spent).

To determine relative time spent for each task performed by a respondent, all of the incumbents' ratings are assumed to account for 100 percent of the member's time spent on the job. First the ratings are summed, each task rating is then divided by the sum of task ratings and multiplied by 100 to provide a relative percentage of time for each task. This procedure provides a basis for comparing tasks in terms of both percent members performing and average percent time spent.

Survey Sample

The final AFSC 41AX survey sample includes responses from 650 active duty job incumbents. Table 1 reflects the distribution, by MAJCOM, of assigned AFSC 41AX personnel. As of December 1995 there were 1,187 members assigned to the career ladder. One-hundred percent of those eligible (N=1,111) were selected for participation in the survey. The 650 respondents represent 55 percent of the assigned population and 59 percent of those surveyed. Table 2 reflects the distribution by paygrade. Tables 3 and 4 represent the ANG and RES sample information. The new methodology of the computer-generated job inventory presented some problems that resulted in a somewhat smaller number of usable inventories. The sample is fairly even across paygrades and is a good reflection of the assigned population.

Task Factor Administration

Task factor information is used for making decisions about career documents or training programs along with job inventory data. To obtain the needed task factor data, selected senior AFSC 41AX personnel located in MTF facilities were asked to complete a training emphasis (TE) booklet. These booklets were processed separately from the JIs and were not computer-generated but rather paper and pencil format.

Training Emphasis (TE). TE is a rating of the amount of emphasis that should be placed on tasks in entry-level training. The senior AFSC 41AX who completed the TE booklets were asked to select tasks they felt require some sort of structured training for entry-level personnel and then indicate how much TE these tasks should receive, from 1 (extremely low emphasis) to 9 (extremely high emphasis). Structured training is defined as training provided by resident technical schools, field training detachments (FTD), mobile training teams (MTT), formal on-the-job training (OJT), or any other organized training method.

Low return rate and lack of agreement among the raters as to what should be taught in entry-level structured training resulted in unusable data. One reason for the lack of agreement could be the wide range of functional areas 41AX personnel are assigned plus the differences in tasks being performed because of facility size or location.

SPECIALTY JOBS (Career Ladder Structure)

Each Air Force Occupational Analysis begins with an examination of the career ladder structure. The structure of jobs within the Health Services Administrator utilization field was examined on the basis of similarity of tasks performed and the percent of time spent ratings provided by job incumbents, independent of other specialty background factors.

A hierarchical grouping program, which is a basic part of the Comprehensive Occupational Data Analysis Program (CODAP) system, creates an individual job description for each respondent (all the tasks performed by that individual and the relative amount of time spent on those tasks). It then compares each job description to every other job description in terms of tasks performed and the relative amount of time spent on each task in the JI. The automated system locates the two job descriptions with the most similar tasks and percent time ratings and combines them to form a composite job description. In successive stages, the system adds new members to the initial group or forms new groups based on the similarity of tasks performed and similar time ratings in the individual job descriptions.

When there is a substantial degree of similarity between jobs, they are grouped together and identified as a *Cluster or Function*. The job structure resulting from this grouping process (the various jobs and clusters within the field) can be used to evaluate the accuracy of AFMAN 36-2105, *Specialty Descriptions*, and Course Training Standards (CTS), and to gain a better understanding of current utilization patterns.

Overview of Active Duty Specialty Jobs

Considering the similarity of tasks performed and the amount of time spent performing each task, 7 clusters and 5 jobs were identified within the AFSC 41AX active duty survey sample. A listing of these is provided below and illustrated in Figure 1. The stage (STG) number shown beside each title references computer-generated identifications; the letter "N" stands for the number of personnel in each group.

- I. FINANCIAL PROGRAM MANAGEMENT JOB (STG156, N=5)
- II. TRAINER JOB (STG256, N=5)

**AFSC 41AX ACTIVE DUTY SPECIALTY JOBS
(N=650)**

OTHER INCLUDES:

- FINANCIAL PROG MGT 1%
- TRAINERS 1%
- MEDICAL RECRUITER 1%
- HEALTH FACILITIES COORD 2%
- TRICARE CONTRACTOR 2%

FIGURE 1

- III. STAFF CLUSTER (STG41, N=50)
- IV. MEDICAL READINESS CLUSTER (STG102, N=39)
- V. ADMINISTRATORS/SQ COMMANDERS CLUSTER (STG88, N=134)
- VI. RESOURCE MANAGEMENT CLUSTER (STG82, N=67)
- VII. MANAGED HEALTH CARE COORDINATOR CLUSTER (STG85, N=82)
- VIII. INFORMATION MANAGEMENT CLUSTER (STG97, N=62)
- IX. LOGISTICS MANAGEMENT CLUSTER (STG84, N=78)
- X. MEDICAL RECRUITER JOB (STG376, N=5)
- XI. HEALTH FACILITIES COORDINATOR JOB (STG219, N=14)
- XII. TRICARE CONTRACTOR JOB (STG178, N=12)

The respondents forming these groups account for 87 percent of the survey sample. The remaining 13 percent are performing tasks or a series of tasks that did not group with any of the defined jobs.

Group Descriptions

The following paragraphs contain brief descriptions of the active duty jobs identified through the career field structure analysis. Also presented are two tables that reflect the time incumbents spent on duties, and selected background data for each group. Table 5 presents the relative time spend by respondents in each job across each duty listed in the JI. Table 6 displays selected background information, such as DAFSC distributions across each group, average of total months in active military service (i.e., Total Active Federal Military Service (TAFMS)), and average number of tasks performed. Appendix A lists representative tasks performed by members of each group.

I. FINANCIAL PROGRAM MANAGEMENT JOB (STG156, N=5) The incumbents in this specialized job perform an average of 25 tasks, the lowest of all jobs and clusters. Three out of the five are Majors, the remaining two being Captains. All five are carrying the 41A4 DAFSC, with an average of 15 years TAFMS. Four members are located at MAJCOM level, with one at HQ USAF. All members describe their primary function in the areas of future planning and forecasting of budget requirements and guidelines. Examples of tasks performed include:

- evaluate budget requirements
- approve or disapprove input to Future Year Defense Plans (FYDPs)
- draft or write inputs to Strategic Health and Resource plans
- evaluate justifications for shortfalls

II. TRAINER JOB (STG 256, N=5). Four members of this job are in the 384 TS, and one is at the 381 TS, both located at Sheppard AFB. Incumbents spent 64 percent of their job time on tasks related to training. All members described themselves as either instructors or course supervisors. Members perform only an average of 28 tasks, among the lowest of the jobs and clusters. Their average TAFMS is 8.5 years, and 80 percent are Captains. Tasks which distinguish this job are:

- prepare lesson plans or lectures
- write test questions
- evaluate training methods or techniques
- conduct resident course classroom training

III. STAFF CLUSTER (STG41, N=50). Members of this cluster spend 35 percent of their time on command and management tasks, which is the highest for any group. Twenty-one percent are Captains and 18 percent Majors, with the remaining 61 percent found throughout all the officer ranks. They average 15 years in TAFMS, and perform an average of 50 tasks. Common tasks being performed are:

- review or edit reports, staff studies and staff summary sheets
- approve or disapprove personnel actions
- implement directives from higher headquarters
- review directives, manuals, or unit publications

Four jobs were identified in this cluster. Members of the first job classified themselves as executive officers, located throughout different organizational levels, involved in administrative procedures, performing an average of 57 tasks, which was the highest in this cluster. The second job had personnel located only at HQ USAF and MAJCOM organizational levels. They were working on manpower, personnel justification and policies. The third job identified had the highest ranking personnel of the cluster, and is involved in legislation and congressional inquiries. The last job had personnel located strictly in hospital settings, performing very few tasks on the average (34), and in ranks of captain or lower. They perform basic administrative-related tasks, such as personal counseling, writing EPRs, and evaluating work performance.

IV. MEDICAL READINESS CLUSTER (STG102, N=39) These personnel perform duties related to training, operations, and planning for emergency, contingency or alert readiness. The majority are captains (64 percent), with an average of 11 years TAFMS. They are mostly located at MTFs or at HQ level. Examples of tasks performed by this group are:

- deploy deployment teams and equipment
- maintain and update medical readiness plans
- review operations plans
- evaluate requirements for Contingency Support Plans (CSPs)

The two jobs in this cluster differ in location and average number of tasks performed. In the first job, all 6 members are captains at MAJCOM-level and are performing an average of 47 tasks relating to procedures and compliance of contingency or alert plans. The second group is located at MTF, performing 90 tasks on the average, with ranks ranging from 2Lt to Majors. This group is more involved with the daily activities of unit alert and emergency planning.

V. ADMINISTRATORS/SQ COMMANDERS CLUSTER (STG 088, N=134). This cluster is the largest and has the highest ranked personnel of all the clusters. Personnel in this cluster average 11 years TAFMS. They are performing 137 tasks on the average, with over 60 percent located in a MTF. The group spend over 50 percent of their time on command, management, and personnel-related tasks. Some representative tasks include:

- advise subordinates on policies, directives, or procedures
- establish performance standards for subordinates
- counsel personnel on personal or military -related matters
- establish work methods or procedures

Personnel within the first of the three jobs identified in this cluster distinguish themselves by performing 192 tasks on average, more than double that of the other two jobs. This group also has a higher percentage of Colonels and Lt Colonels than the other groups, with 18 of the 63 members assigned overseas. The personnel within the second job are performing an average of 87 tasks, with all but one assigned to an MTF. Personnel within the third job perform an average of 83 tasks, with half assigned to an MTF and the other half assigned to DOD, HQ USAF, MAJCOM and Medical Training Group levels. The tasks being performed by all three groups are similar and the personnel referred to their job title as either Commander or Administrator.

VI. RESOURCE MANAGEMENT CLUSTER (STG82,N=67). Members of this cluster spend 52 percent of their time on resource management activities. Eighty-seven percent hold the DAFSC of qualified (41A3) or staff (41A4), with the predominant rank being Captain. Representative tasks are:

- develop budget or budget estimates
- compile operations and maintenance budgets
- perform cost benefit analysis
- allocate unit funds

There were two jobs identified in this cluster. One shows an emphasis on tasks related to manpower and unit budget requirements, with 87 percent assigned to medical facilities (hospital or clinic). Forty-three percent are Captain, performing an average number of 150 tasks. Members of the other job perform on the average 60 tasks, hold a higher rank (Major and Lt Col) and are located at MAJCOM-level and lead agencies. They are performing tasks related to cost analysis, future plans and resource sharing proposals.

VII. MANAGED HEALTH CARE COORDINATOR CLUSTER (STG85, N=82). Members of this second largest cluster spend their time on marketing, working with patients, and coordinating services within the TriCare program. They perform an average of 123 tasks, with paygrades ranging from 2Lt to Lt Col. Average TAFMS is 11 years. Some tasks which distinguish this cluster from others include:

- analyze potential managed care initiatives
- develop marketing materials
- identify needs of new health care programs
- conduct TriCare educational briefings to beneficiaries and medical staff

Three jobs were identified in this cluster. The first job is characterized by 38 percent of its members being located at a lead agency heavily involved in marketing and managed care initiatives. Over 60 percent are Majors or higher, and hold a DAFSC of 41A4. The second job identified is located in hospitals and individuals work in the areas of patient administration and information. Personnel performing this job are in the rank of Captain or lower. The last job in this cluster is located in clinical and hospital settings. It entails coordinating with lead agencies and MTF providers, and the administration of CHAMPUS benefits. Eighty-one percent of the officers in this job are Captains or higher.

VIII. INFORMATION MANAGEMENT CLUSTER (STG97, N=62). Members of this cluster spend a great deal of their time working a combination of technical and management tasks. An average of 111 tasks are being performed, with the majority of personnel in ranks of Captain or higher (84 percent). Sixty-eight percent are located at either a hospital or clinic. Tasks performed included:

- evaluate hardware or software request
- direct operations of medical information systems activities
- perform software loads
- change computer systems configurations

Two out of the four jobs identified in this cluster are technical jobs. Personnel in one of the jobs perform installation, troubleshooting and programming of software or hardware. They are mainly located in the smaller hospitals having 1-40 beds at MAJCOM or HQ level. Personnel in the next job are located in smaller hospitals and perform tasks related to technical management such as evaluating computer performance and research of new hardware or software. The last two jobs in this cluster involve management-related tasks. One job deals with the activities within an information office, working with personnel and administrative tasks. The last job deals with policy, guidelines and budgeting. Seventy-seven percent of personnel within the last two jobs are located in the larger hospitals.

IX. LOGISTICS MANAGEMENT CLUSTER (STG84, N=78). The 78 members of this cluster spend 71 percent of their time in the areas of logistics management. They perform tasks related to facilities, supplies, and equipment management. Average number of tasks performed is 141, with more than half (73 percent) being Captain or higher rank. Eighty-two percent are located in an MTF, ranging from clinics to hospital. Representative tasks are:

- evaluate equipment requirements
- regulate IMPAC program
- coordinate maintenance of facilities with appropriate agencies
- review monthly stock status reports

Four jobs were identified in this cluster. Three of the jobs had fewer than 10 incumbents. In the first job are personnel working closely with vendors and contractors in equipment and supply management. They are located in either a clinic or hospital setting with less than 40 beds. The second job is involved in MTF facility management, O & M construction, inspections and space utilization. Personnel are located in different sized hospitals, with the majority in the larger ones (66 percent). Personnel in the third job are either located in hospitals over 300 beds or in hospitals with less than 25 beds. They are directing the operations of several programs, such as equipment, WRM, and non-medical supplies, as well as being involved in supervision of personnel. The last job in this cluster is the largest, having 50 officers located in an MTF, and representing all ranks. They are involved in the day to day activities of a logistic office -- directing, evaluating and reviewing all functions.

X. MEDICAL RECRUITER JOB (STG376, N=5). The 5 officers in this job perform an average of 87 tasks. All of them supervise and are involved in the recruitment of medical personnel. They are all Captain assigned to AETC. Examples of tasks performed by personnel in this job:

- review medical application packages
- conduct medical school visitations
- interview job applicants
- clarify or validate prospects' objectives or concerns

XI. HEALTH FACILITIES COORDINATOR JOB (STG219,N=14). Personnel in this job perform an average of 88 tasks. Twelve out of the 14 hold a paygrade of Captain and higher, with an average of 14 years TAFMS. Ten are assigned to HQ USAF, with the other 4 assigned to MTF settings. Personnel are working all phases of MILCON and O & M projects, from planning, cost analysis, supervising constructions to inspecting and evaluating changes. Some representative tasks are:

- defend MILCON project
- track facilities design projects
- develop cost estimates for MILCON or O & M projects
- define facility project space requirements

XII. TRICARE CONTRACTOR JOB (STG178, N=12). This distinctive job involves coordination, evaluation and analysis of the MCSC and Tricare requirement. Seven members are Captain, while the remaining five are Major. Half of the personnel are located in a Lead Agency, the remaining are located in large hospitals and DOD organization level. Tasks performed are:

- evaluate regional or MTF proposals for the MCSC
- write inputs to the MCSC
- develop sharing agreements
- regulate MCSC contractor to ensure contract compliance

Summary

The seven clusters identified in this study are clearly defined by functional areas found within an MTF facility. The five independent jobs identified clearly describe some of the unique jobs found in this utilization field. Some tasks are common to most clusters and jobs in the command, management and administrative sections, but the vast majority of tasks apply to only one or two jobs. The size of the MTF affects the diversity of the individual jobs. Small facilities have personnel working across several areas while large facilities have more defined and restricted jobs.

Overview of ANG and RES Specialty Jobs

Four clusters and three independent jobs were identified for the 41AX ANG and RES personnel. A listing of these is provided below and illustrated in Figure 2.

- I. ADMINISTRATORS CLUSTER (STG 50; N=6)
- II. LOGISTICS/INSPECTION OFFICER CLUSTER (STG 32; N=13)
- III. MEDICAL READINESS OFFICER (STG74; N=7)
- IV. STAFF CLUSTER (STG35; N=97)
- V. AEROMEDICAL EVAC OFFICER CLUSTER (STG 43; N=47)
- VI. INFORMATIONAL MANAGERS (STG 77; N=5)
- VII. ASSISTANT AEROMEDICAL EVAC OFFICER (STG 48; N=3)

Personnel in these jobs account for 81 percent of the survey sample. The remaining 19 percent are performing tasks not grouped with any defined job.

Group Description

The following paragraphs contain brief descriptions of the ANG and RES jobs identified through the career structure analysis. Table 7 presents the relative time spent by respondents in each job across duties. Table 8 lists selected background questions for the ANG and RES jobs. Appendix B lists representative tasks performed by members of each group.

I. ADMINISTRATORS CLUSTER (STG50, N=6). This is the smallest of all the clusters, and personnel perform an average of 26 tasks. This cluster consists of five RES officers and one ANG officer. They spend 53 percent of their time in the personnel duty. Representative tasks are:

- establish work methods or procedures
- develop organizational or functional charts
- implement directives from higher headquarters
- draft or write Officer Performance Reports (OPRs)

AVERAGE NUMBER OF TASKS PERFORMED	26	33	38	129	87	84	8

Two jobs were identified in this cluster, with three officers in each job. The first job has the higher ranking officers between the two jobs, but they perform the lower number of tasks (24 tasks). All three in this group are RES personnel. The two RES officers and one ANG officer in the second job perform only 28 tasks on the average. All three are located in a clinic setting. Both groups are performing similar tasks, with the second job performing a somewhat higher number of general administrative tasks.

II. LOGISTICS/INSPECTION OFFICER CLUSTER (STG32, N=13). Members of this cluster spend their time in the logistics and inspecting and evaluation duty sections. Seven are ANG officers with the remaining six being RES officers. The highest rank for this group is Captain. Common tasks being performed are:

- conduct self-inspections
- develop and update checklist
- direct operations of medical supply activities
- evaluate inspection report findings

Two jobs were identified in this cluster. The first job is classified as medical service coordinators involved in the inventory of supplies and equipment. They perform an average of 48 tasks and hold ranks from 2Lt to Maj. The last job is inspection monitors, they perform 27 tasks on the average. The highest rank in this group is Captain.

III. MEDICAL READINESS OFFICER (STG74, N=7). This job consists of RES officers, six of them Captains, with the remaining one a Lt Col. They perform an average of 38 tasks. They are spending 50 percent of their time in the area of medical readiness, involved heavily in the areas of training personnel, developing exercises, and assigning personnel to training and duty positions. Common tasks being performed are:

- develop medical readiness training
- review recall rosters
- assign personnel to deployment positions
- review unit exercise reports

IV. STAFF CLUSTER (STG35, N=97). This is the largest of all the clusters, with 56 RES officers and 41 ANG officers. They are performing an average of 129 tasks, with ranks ranging from 2Lt to Col. The group spend 40 percent of their time in personnel and command and management related tasks. Some representative tasks include:

- advise subordinates on policies, directives, or procedures
- propose new training programs
- approve or disapprove work assignments or priorities
- evaluate inspection reports findings

The first of 4 jobs identified in this cluster consists of 4 officers who perform an average of 53 tasks, the lowest of the 4 jobs. Their responsibility is in the areas of patient administration, recording, and personnel duty location and work assignments. The 4 members of the second job perform 68 tasks on average and are involved in safety and security programs. The third job group has the most people (N=83) who perform the highest average number of tasks (140), related to training and personnel issues. The 4 officers in the last job spend time on general administrative related tasks and perform 72 tasks on the average.

V. AEROMEDICAL EVAC OFFICER CLUSTER (STG43, N=47). In this cluster, personnel perform duties related to the operations of aeromedical evacuation activities. On the average, 87 tasks are performed by 36 RES officers and 11 ANG officers. Forty percent are Captains with the remainder representing all other ranks. Examples of tasks performed by this group are:

- maintain control center status board
- direct patient loading or unloading
- prepare air evacuation mission records
- update mission loads and times

Four jobs were identified in this cluster. All four members of the first job are RES officers involved in the plans and performance of aero evac operations. They perform an average of 66 tasks. The second group of officers perform the highest number of tasks (115) mostly related to preparing aircraft, mission support, and after action reporting. Eighteen out of the 24 are RES officers. The third job is deployment managers, who perform an average of 72 tasks. Their responsibility is the coordination of teams and equipment, and briefing mobility teams of their duties and responsibilities. The last job consists of personnel performing an average of 44 tasks, such as, maintaining records, establishing requirements and scheduling. All but one are RES officers. Each of the four jobs have personnel ranging from 2Lt through Lt Col.

VI. INFORMATION MANAGERS (STG 77, N=5). Four out of the 5 incumbents in this job are RES officers, performing an average of 84 tasks. Three Captains and 2 Majors, all located in AMC, perform tasks related to all aspects of the computer, from installing hardware and software, procurement, and management of hardware and software. Tasks performed included:

- allocate computer hardware
- compile hardware and software needs
- troubleshoot hardware problems
- install computer systems

VII. ASSISTANT AEROMEDICAL EVAC OFFICER (STG48, N=3). Members of this job are distinguished from the others by performing an average of only 8 tasks and being the lowest ranking individuals (all lieutenants). They are located at ACC bases with 2 in the RESs and 1 in the ANG. They spend the majority of their time in the Aeromedical duty (87 percent). Some representative tasks include:

- update mission loads and times
- brief departing air evacuation patients
- place patients valuables in secure areas
- contract fuel management for aircraft refueling

Summary

The four clusters and three jobs identified in this study are defined basically by four functions: Command and Management, Personnel, Medical Readiness, and Aeromedical Evacuation. The average number of tasks performed is very small, indicating very limited duties, mostly revolving around aspects of preparing for medical readiness and evacuations. Very few officers are assigned outside of AMC and ACC.

Comparisons of Active Duty, ANG and RES Officers Specialty Jobs

The results of the active duty specialty job analysis were compared to those of the ANG and RES specialty jobs. Many of the jobs performed by active duty, especially the independent jobs were not found in the ANG and RES analysis. Jobs being performed in an MTF setting were done on a limited scale by the ANG and RES personnel. The jobs found in the ANG and RES analysis were performed by the active duty with the exceptions of the two aero evac jobs.

ANALYSIS OF DAFSC GROUPS

An analysis of DAFSC groups, in conjunction with the analysis of the career ladder structure, is an important part of each occupational survey. The DAFSC analysis identifies differences in tasks performed at the various skill levels. This information may be used to evaluate how well career ladder documents, such as the AFMAN 36-2105 *Specialty Description* and the CTS, reflect what utilization field personnel are actually performing in the field.

Table 9 offers another perspective by displaying the relative percent time spent on each duty across the skill-level groups.

The differences between the active duty DAFSC 41A1, 41A3, and staff personnel 41A4 were very slight. One of the differences was in performing tasks related to Duty A Command and Management, where some progression in responsibility was found. Another difference, although only slight, was that 41A1 officers perform more tasks in the area of Logistics than the 41A3 members, while the 41A3 officers perform more tasks in the personnel area.

The active duty personnel were primarily 41A3, except for the Health Facilities Planner job, and Financial Program Manager job. Over 70 percent of the DAFSC 41A1 and 41A3 members are located at an MTF. Only 18 percent of the 41A4 members, who are assigned mostly to HQ and MAJCOM levels, are assigned to an MTF. Table 10 shows DAFSC by specialty jobs.

The skill-level groups for the ANG/RES career ladder are displayed by percent time spent on each duty in Table 11, with specialty jobs represented in Table 12 .

The differences between skill-level jobs for the 41AX ANG/RES officer are very slight. DAFSC progression is shown by more time being spent performing tasks related to personnel and command and management. A decrease in aeroevac tasks is shown as personnel progress from DAFSC 41A1 through 41A4.

The ANG and RES personnel are mostly 41A3, except for the Assistant Aeromedical Evac officer job and the Medical Readiness job.

ACTIVE DUTY

DAFSC 41A1. The 107 DAFSC 41A1 account for 16 percent of the survey sample and perform an average of 102 tasks. Forty percent are First Lieutenants, and 46 percent are Captains. These officers spend the largest percentage time in Personnel duties (19 percent), command and management (14 percent) and logistics management (14 percent), but spend some time in all the functional areas.

DAFSC 41A3. The 369 DAFSC 41A3 account for 58 percent of the survey sample and perform an average of 108 tasks. Fifty-nine percent are Captains. They are more concentrated in the areas of personnel, command and management, resource management and TRICARE.

DAFSC 41A4: The 164 DAFSC 41A4 account for 25 percent of the survey sample and perform an average of 91 tasks. Forty-one percent of this group are Major. They spend more time in the command management, and resource management than the other respondents.

ANG and RES

DAFSC 41A1: The 65 DAFSC 41A1 ANG and RES personnel account for 30 percent of survey sample and perform an average of 60 tasks. Thirty-one percent are Second Lieutenants while 42 percent are First Lieutenants. DAFSC 41A1 personnel spend time in logistics, aeromedical evacuation, and medical readiness. They perform many technical tasks.

DAFSC 41A3: The 141 DAFSC 41A3 is the largest of the groups and accounts for 64 percent of the sample who perform 95 tasks on the average. Fifty-four percent are Captains, but group members cover all the other ranks. They are spending more time in the personnel and command duties, although still performing readiness and aeromedical evacuation tasks.

DAFSC 41A4: The 13 DAFSC 41A4 personnel account for 6 percent of the sample and perform on an average of 119 tasks. Fifty-four percent are Majors. This group is spending their time in the areas of personnel, evaluation and inspection.

ANALYSIS OF AFMAN 36-2105 *SPECIALTY DESCRIPTION*

Survey data were compared to the AFMAN 36-2105, *Specialty Description*, for Health Services Administrator, effective 31 October 1995. This specialty description is intended to provide a broad overview of the duties and responsibilities of each skill level. In general, the specialty description covers tasks and jobs performed by the utilization field personnel. It should be noted, however, that AFMAN 36-2105 *Specialty Description* does not specify duties and responsibilities for each skill level.

WRITE-IN COMMENTS

When filling out the JI, respondents were encouraged to write in any comments related to their jobs. In this survey, a relatively large number of comments were received. Some of the comments address definitions of duties within the OMG and staff structure, training issues, and

personnel qualification to get the job done. A large number of comments are related to the decrease of responsibilities and control of the administrator, the definition of duties between the Administrators and Squadron Commander, plus "dual-hat" positions in an MTF setting.

Several write-in comments about receiving advanced training and being qualified to do their job (ie., information managers) were also found. Comments received from the field acknowledge a need for refresher training when moving from one MTF functional area to another. This training is available at the HSA school, but field management personnel do not seem to be aware of this opportunity. Representative comments are listed below:

"A better define OMG...specifically the Administrator vs Support Squadron Commander jobs"

"I believe Flight Chief, Squadron Commanders and Administrators duties require further definitions, especially the OMG structure and anticipated changes"

"My supervisor (an MSC) has dual hats as the Support Squadron Commander and the Administrator"

"Information systems is severely undermanned and needs more technical expertise...can not manage...too busy doing technical work. All systems people I talk to are frustrated."

SPECIAL ISSUES

Background questions as well as write-in comments can provide additional information to the field. A large number of write-in comments are about the OMG management structure and two background questions related to this subject were presented to the field. The two background questions; (1) "For whom do you work?"; (2) "For whom do you think you should work?" resulted in great differences between answers. Of the total sample, 162 personnel work for the Support Squadron Commander but only 58 believe they should. One hundred and fifteen think they should be working for the Administrator, but only 27 do. In addition, 99 believe they should work for the Group Commander, but only 69 do. The combination of write-in comments and the background questions has shown that a large part of our sample expressed uncertainty as to whom they should be working for and what duty responsibilities should fall under the leadership of an Administrator or Squadron Commander.

JOB SATISFACTION ANALYSIS

An examination of responses to the job satisfaction questions can give career ladder managers a better understanding of some of the factors that may affect the job performance of officers in the field. The survey included questions covering job interest, perceived utilization of talents and training, sense of accomplishment from work, and reenlistment intentions. The responses of the current survey sample were then analyzed by making comparisons across specialty groups identified in the **SPECIALTY JOBS** section of the report.

An examination of job satisfaction data can also reveal the influences performing certain jobs may have on overall job satisfaction. Table 13 presents job satisfaction data for the jobs identified in the career ladder structure for active duty AFSC 41AX. Respondents in TriCare Contract Managers job believe their job to be quite dull, and average lower than members of the other jobs and clusters for sense of accomplishment. The 12 members of this job are similar to the other jobs and clusters in terms of seniority and location, but perform one of the lowest number of tasks of any group. Officers in other clusters and jobs measured generally high in all four satisfaction ratings.

Job satisfaction indicators across the ANG and RES specialty jobs is presented in Table 14. Job satisfaction among the clusters and jobs is generally high, with the exception of the Asst. Aeromedical Evac Officers, who rated the use of their training rather low.

IMPLICATIONS

This survey was conducted primarily to provide training personnel with current information on the Health Services Administrator utilization field, and to identify the tasks Active Duty, ANG and RES officers are performing on their jobs.

Seven clusters and five independent jobs were identified for the active duty. Each functional area in an MTF setting, and the special jobs that are performed by AFSC 41AX officers were identified. Four clusters and 3 independent jobs for the ANG and RES officers were identified, within two major task areas. One covered all aspects of the Aeromedical Evacuation duties and the other covered a wide range of tasks associated with personnel. AFMAN 36-2105 *Specialty Description* broadly describes the jobs and tasks being performed. Job satisfaction is relatively high across the active duty, ANG and RES officer.

Special issues dealing with restructuring, the establishment of the OMG, and training were reported. A clearer understanding of the organizational structures and the duties and responsibilities of the administrator versus the squadron commanders were issues identified by

the field. Training, as it effects moving from one functional area to another, and advanced level training were also issues identified by the field.

The findings of this OSR come directly from data collected from a sample of 869 active duty, ANG and RES worldwide. The outcome from this study was delivered to training personnel and interested parties, and will provide a good tool in the process of making utilization field decisions.
