Background

Case studies have shown that properly implemented systems engineering can result in commensurate benefits

Broadly applicable quantification of these costs and benefits remains elusive

- Complicated by the lack of a broadly accepted definition of Systems Engineering
- Insufficient identification and tracking of Systems
 Engineering costs and efforts
- Exacerbated by increasing complexity and size of systems and Systems of Systems

The Task

The Office of the Under Secretary of Defense (AT&L) has tasked the NDIA Systems Engineering Division to research and report on the costs and benefits associated with Systems Engineering practices in the acquisition and / or development of military systems.

The Systems Engineering Effectiveness Committee (SEEC) is addressing this task via a survey of program and project managers across the defense industry.

Survey Objective

Identify the degree of correlation between the use of specific systems engineering practices and activities on projects, and quantitative measures of project / program performance.

Survey Method

Use the resources of NDIA SE Division to reach a broad constituency

The initial survey will focus on industry members of NDIA that are prime contractors and subcontractors

Collect feedback from project / program managers

Survey Development Plan

- Define the goal
- Choose the population
- Define the means to assess usage of SE practices
- Define the measured benefits to be studied
- Develop the survey instrument
- Execute the survey
- Analyze the results
- Report
- Plan future studies

Step 1: Define the Goal

Identify correlations between SE practices and program performance

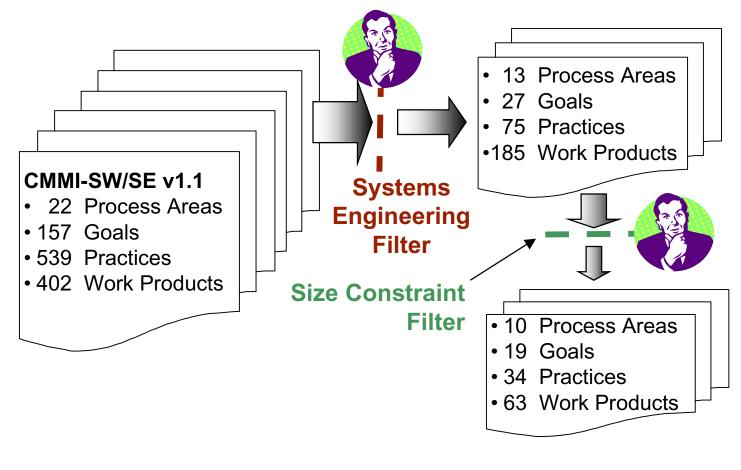

Step 2: Choose the population

Chosen population consists of contractors and subcontractors providing products to the DoD

Step 3:

Define assessment of SE practices

Step 4: Define performance measures

Utilize measures common to many organizations

- Earned Value
- Award Fees
- Technical Requirements Satisfaction
- Milestone Satisfaction
- Problem Reports

Step 5:

Develop the survey instrument

Self-administration

 formatted for web-based deployment

Confidentiality

- No elicitation of identifying data
- Anonymous response collection
- Responses accessible only to authorized SEI staff

Integrity

- Data used only for stated purpose
- No attempt to extract identification data

Self-checking

Version 1.0

Oct-05 NDIA SE Conference - page 9

Section 1 - Characterization

Characterization of the project / program under consideration

Project / program

- Stability
- Lifecycle phase
- Subcontracting
- Application domain
- Customer / User
- -etc.

- Size

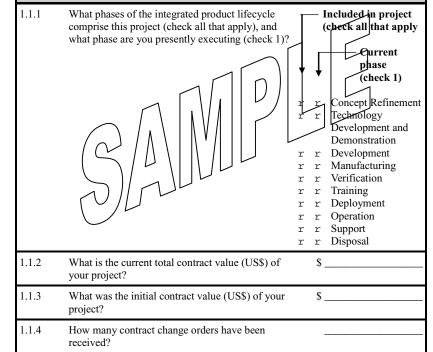

Organization

- Size
- Organizational capability
- Related experience
- -etc.

Section 1: Characterization

The objective of this section is to gather information to characterize the project under consideration. This information will assist the survey analysts in categorizing the project, and the executing organization to better understand your responses.

1.1 Project – information to characterize the specific project under discussion. Size, stability, lifecycle phase, subcontracting, and application domain are among the parameters used for program characterization.

Section 2: SE Evidence

Process definition Project /program planning Risk management Requirements development Requirements management Trade studies Interfaces Product structure Product structure Product integration Test and verification Project / program reviews Validation Configuration management

	Rate your agreement with the following statements	Strongly Disagree	Disagree	Agree	Strongly Agree
2.1	Process Definition	J			
2.1.1	This project utilizes a documented set of systems engineering processes for the planning and execution of the project	r	r	r	r
2.2	Project Planning				
2.2.1 This project has an accurate and up to date Work Breakdown Structure (WBS) that	an accurate and work package descriptions	r	r	r	r
	Breakdown b is based upon the product	r	r	r	r
	that cis developed with the active participation of those who perform the systems engineering activities	r	r	r	r

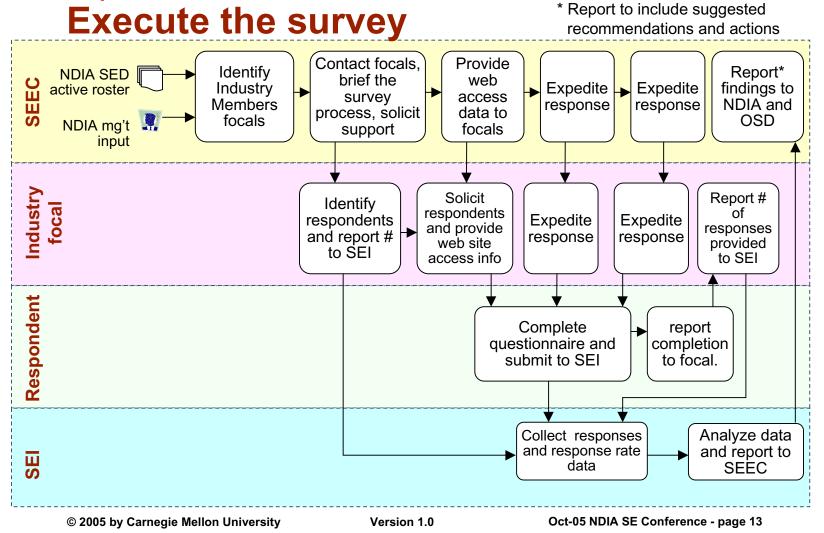

Section 3: Performance Metrics

Earned Value
Award fees
Technical requirements satisfaction
Milestone satisfaction
Problem reports

3.1	Earned Value Management System (EVMS)						
	Rate your agreement with the following statements	Strongly Disagree	Disagree	Agree	Strongly Agree		
3.1.1	Your customer requires that you supply EVMS data?	Δr	r	r	r		
3.1.2	EVMS data is available to decision makers in a timely manner (i.e. current within 2 weeks)?	r	r	r	r		
3.1.3	The requirement to track and report EVMS data is levied upon the project's suppliers.	r	r	r	r		
3.1.4	Variance thresholds for CPI and SPI variance are defined, documented, and used to determine when	r	r	r	r		

Step 6:

Step 7: Analyze the results

Partition responses based on project characterizations

Analyze survey responses to look for correlations between the SE practices and the chosen metrics.

Step 8: **Report**

Summarize survey results and analysis in a report.

Step 9: Plan future studies

Based upon the findings from the survey, the need for additional studies may be defined.

Status

Survey instrument development complete Web deployment complete Respondent identification in progress Response collection through Nov. Analysis through Dec. and Jan. Report in Feb.
