## ABSTRACT

This volume presents a tabulation of physical and chemical observations made at various locations in the Bellingham-Samish Bay system during the period from November 1959 to November 1961. Charts show the positions of the stations sampled. Values for temperature, salinity, dissolved oxygen, dissolved inorganic phosphate and spent sulfite liquor are given at selected depths from the surface to near bottom.

## INTRODUCTION

The publication, "AN OCEANOGRAPHIC SURVEY OF THE BELLINGHAM-SAMISH BAY SYSTEM", is divided into two volumes. This volume (Volume I) is a tabulation of chemical and physical data collected at various locations in the Bellingham-Samish Bay system from November 1959 to November 1961. The results of these observations are analyzed and discussed in Volume II of this report.

Two charter vessels, the ASTOR and the HYDAH, and the Department of Oceanography research vessel, the BROWN BEAR, were used to collect the data.

The data presented in this report were processed by machine methods. After the actual sampling depths were determined, temperature readings corrected and the chemical analyses complete, the data were punched on IBM cards. Then, calculations of salinity (or chlorinity), density as sigma-t, oxygen in millilieters per liter (ml/l) and percentage of oxygen saturation were made by the IBM 650 magnetic drum data processing machine. Portions of the original observed data and computed values based on these data were put into tabular form by means of the IBM 407 tabulator.

At the beginning of the survey, 27 sampling locations were established within the Bellingham-Samish Bay system and its approaches and were given fixed code names. On each cruise station numbers were assigned, but in chronological order so that the same location did not necessarily receive the same number from cruise to cruise. Table 1 presents a list of the established sampling sites with the various stations numbers listed for each cruise. Figure 1 shows the established sampling sites. Station location charts are presented before the data for each cruise.

	The salinity of all samples reported in this volume was determined using a University of Washington salinometer (Paquette, 1958). The probable error for samples with a salinity greater than 14 ‰ is less than 0.010 ‰ but for samples with a salinity of less than 14 ‰ the probable error may be as great as 0.030 ‰.
SIGMA-T	An expression for the density of sea water, at atmospheric pressure and its <u>in situ</u> temperature and salinity, as defined by the equation

OXYGEN	
MG.AT.	Concentration of dissolved oxygen expressed in milligrams of oxygen per liter of sea water as determined by the modified Winkler method described by Thompson and Robinson (1939). To obtain parts per million, multiply the value in mg.at. by 16.
ML/L	Concentration of dissolved oxygen per liter of sea water, expressed in milliliters of oxygen gas at normal pressure and temperature.

- SATN. Ratio (expressed in percent) of the amount of oxygen actually dissolved in the sample, compared to the amount of oxygen necessary to saturate a sample of the same sea water. The amount of oxygen necessary to saturate the sea water was calculated from the equation of Truesdale and Gameson (1957).
- PHOS. Amount of soluble inorganic phosphate expressed in microgram-atoms per liter as determined by the method of Robinson and Thompson (1948), except that color intensities were measured with a Beckman spectrophotometer model DU and a constant temperature bath set at 27 degrees centigrade was used to bring all samples and standards to the same temperature.
- SSL Amount of spent sulfite liquor expressed in parts per million, based on standards containing ten percent solids by weight. A blow-pit liquor sample obtained from the Puget Sound Pulp and Timber Company was used as the standard. All samples and standards were analyzed by the Pearl-Benson technique as modified by Felicetta and McCarthy (1959).

Only observed values are reported. If a value was not observed at a given station (e.g., phosphate) that property is not indicated in the data column heading. If a value was rejected as being questionable or was lost, the individual result is filled in with dashes. Asterisks (\*) in the station headings indicate that the value was not observed.
