13. ABSTRACT Describes a method for evaluation of decontamination equipment operational and functional performance characteristics. Identifies supporting tests, facilities, and equipment required. Provides procedures for functional suitability tests. Applicable to power driven, vehicular or skid-mounted CBR decontamination equipment.

	Background	2	1
	Equipment and Facilities	3	1
II.	TEST PROCEDURES		
	Supporting Tests	4	2
III.	SUPPLEMENTARY INSTRUCTIONS . . .	5	2

SECTION I
GENERAL

1. Purpose and Scope. This procedure applies to power-driven decontaminating apparatus, vehicular or skid-mounted. Following these test procedures, the item is used to decontaminate personnel, areas, equipment, and facilities which have been contaminated with chemical, biological and radiological agents.

2. Background. Decontaminating apparatus is extremely important since a CBR attack impacts on equipment as well as personnel. The time necessary to return an item of equipment to full operation depends on the efficiency of the decontaminating apparatus and the operating personnel. Success on the battlefield could be decisive when well trained personnel efficiently employ a tried and proven decontaminating apparatus.

3. Equipment and Facilities. In addition to the equipment and facilities described in the documents listed in Section II, the following facilities and devices are required to adequately conduct valid tests:

- a. Chemical agent simulants, as required.
- b. Chemical agent detectors and samples.
- c. Biological agent simulants, as required.
- d. Biological agent detectors and samplers.
- e. Laboratory facilities, for analysis.
- f. Biological agent simulant disseminating devices.

SECTION III
SUPPLEMENTARY INSTRUCTIONS

5. Functional Suitability.

a. Objective. To determine the functional suitability of the test item as a means of decontaminating personnel areas, equipment and facilities as described in applicable MN or other appropriate documents.

b. Method. The test item is assembled and operated in accordance with technical manuals and other applicable equipment specifications. Selected and trained personnel perform the preoperational checks, ascertain the use of the approved mixtures of decontaminating agents and utilize the apparatus as specified. Records are maintained indicating general malfunction remarks and specific operating failures.

c. Data Required.

(1) Nomenclature of the test item including interchangeability of parts and components.

(2) Times required for assembly and disassembly.

(3) Deficiencies and shortcomings observed during assembly, operation and disassembly.

(4) Personnel required to assemble and operate the test item.

(5) Remarks concerning operation of the test item.

d. Analytical Plan. At the completion of data collection phases, test results are evaluated to determine whether or not the test item meets the stated performance requirements.

Recommended changes to this publication should be forwarded to Commanding General, U. S. Army Test and Evaluation Command, AMSTE-PA-M, Aberdeen Proving Ground, Maryland 21005. Technical information related to this publication may be obtained from the preparing activity, President, U. S. Army Armor and Engineer Board, ATTN: STEBB-MO, Fort Knox, Kentucky 40121.
