Acknowledgments

The Office of People Analytics (OPA)¹ is indebted to numerous people for their assistance with the *2017 Survey of Active Duty Spouses*, which was conducted on behalf of the Office of the Under Secretary of Defense for Personnel and Readiness (OUSDP[R&R]). The survey program is conducted under the leadership of Dr. Paul Rosenfeld, Director of OPA's *Center for Retention and Readiness* (OPA[R&R]).

Policy officials contributing to the development of this survey included Dr. Cathy Flynn and Dr. Yuko Whitestone (Military Community and Family Policy).

OPA's R&R, under the guidance of Carol Newell, Deputy Director, is responsible for the development of questionnaires in the survey program. The lead survey design analyst was Malikah Dorvil. In addition, she designed the unique presentation of complex items used in this tabulation volume. Survey Operations, under the guidance of Margaret Coffey, Team Lead, is responsible for the survey database construction and archiving. The operations analysts on this survey were Amy Campbell and Jason Haynes, both Fors Marsh Group (FMG). Jason Haynes used OPA's Statistical Analysis Macros to calculate the results presented in this tabulation volume.

OPA's Statistical Methods Team, under the guidance of David McGrath, was responsible for the statistical aspects of this survey, including sample frame development, sampling, weighting, imputation, and the implementation of statistical hypothesis testing. The lead sampling and weighting analyst on this survey was Jeffrey McLeod, overseen by Eric Falk. Susan Reinhold provided programming support for the sampling and weighting tasks. Data Recognition Corporation (DRC) performed data collection and editing.

Mary Padilla, FMG, formatted and assembled this tabulation volume using OPA's Survey Reporting Tool. A team consisting of Amy Campbell, Malikah Dorvil, Dr. Lindsay Rock, Jason Haynes, and Jeffrey McLeod completed quality control for this tabulation volume.

¹ Defense Manpower Data Center's (DMDC) survey division, Research, Surveys, and Statistics Center (RSSC), was reorganized in October 2016 to fall under the newly-created Office of People Analytics. The Defense Human Resources Activity (DHRA) director and the director of DMDC transferred all survey responsibilities to OPA. Any references to DMDC in this document apply to OPA.

2017 SURVEY OF ACTIVE DUTY SPOUSES: TABULATIONS OF RESPONSES

Introduction to the Survey

The *Office of People Analytics* (OPA) conducts both web-based and paper-and-pen surveys to support the personnel information needs of the Under Secretary of Defense for Personnel and Readiness (USD[P&R]). These surveys assess the attitudes and opinions of the entire Department of Defense (DoD) community on a wide range of personnel issues. OPA's *Center for Retention and Readiness* (OPA[R&R]) surveys are in-depth studies of topics and populations, often requiring both web-based and paper-and-pen surveys.

This report contains tabulations of responses from the *2017 Survey of Active Duty Spouses* (2017 ADSS) conducted June 22, 2017 to November 13, 2017. This introduction (1) summarizes the survey content, (2) defines the total population surveyed and the subgroups used in the tabulations of responses, (3) summarizes the survey methodology,² and (4) provides details on how to use the tabulations. The tabulations and a copy of the survey items follow this introduction.³

Survey Content

The 2017 ADSS continues a line of research on active duty spouses begun with the 1985 DoD *Surveys of Officer and Enlisted Personnel and Military Spouses*. In 1992, 1999, 2006, 2008, 2012, and 2015, OPA conducted subsequent Joint Service surveys of active duty spouses. Many key topics covered by the 2017 ADSS were also included in its predecessors; however, questions have been updated or streamlined in the 2017 ADSS.⁴ The survey was administered by both web and paper-and-pen questionnaires. The web version of the survey contained additional survey items, which are identified in the tabulations. The web questionnaire appears in Appendix A, and the paper-and-pen questionnaire appears in Appendix B. The survey was subdivided into the following 13 topic areas:

1. *Background Information*—Marital status, length of marriage, nights away, on/off base housing location, housing distance to military base/installation, race/ethnicity, age, gender, dependents, and member's active duty status.
2. *Education and Employment*—Spouse education level and goals, primary funding source for highest diploma/degree earned, current academic enrollment status and barriers to pursuing further education, reasons for

² Details on survey methodology are reported by OPA (2018b).

³ The survey was administered via the web and paper-and-pen questionnaires. Question numbering differed between the web and paper questionnaires. The tabulations follow the order of items used on the web administration. Appendix A provides the order of items used on the web administration, and Appendix B provides the order of items used on the paper-and-pen administration.

⁴ Navy-specific items were included on the web version of the survey; however, the tabulations for these items are presented in separate Navy tabulations.

pursuing additional education, use of Military Spouse Career Advancement Accounts, reasons for not using Military Spouse Career Advancement Accounts, military service, spouse employment status, reasons for not looking for work, weeks spent looking for work, hours worked per week, reasons for working part-time, most recent/current career field, self-employment status, Federal government employment status, perceived contribution of spouse's income to household income, employed within area of education, weeks paid for work in the past 12 months, professional license/certification, and desire/need to work.

3. *Permanent Change of Station (PCS) Moves*—Number of spouse moves, length of time since most recent PCS move, personal/family problems with most recent PCS move, length of time to find employment after last PCS move, and transfer of professional licensure after last PCS move.
4. *The Military Spouse's Family*—Number of children living in household, use of child care, satisfaction with on- and off-base child care, number of children using child care, main reason for not using child care, satisfaction with on- and off-base schools, special medical/educational needs of the family, enrollment in the Exceptional Family Member Program, birth date and gender of one child living in household, attachment behaviors of this one child, impact of military family life on this one child in past 12 months, and days of school missed by this one child in past 12 months.
5. *Health and Well-Being*—Perceptions of stress, mental and physical health, marital satisfaction and stability, access and use of counseling, usefulness of counseling sources, and attitudes towards receiving counseling.
6. *Feelings About Military Life*—Overall satisfaction with military way of life, spouse's support to stay on active duty, perceived social support, use of Military OneSource, usefulness of Military OneSource features/services, importance of military benefits, member's wounded warrior status, and member's wound interference with family participation.
7. *Your Spouse's Deployments*—Career deployments, times member deployed in past 12 months, relocation during deployments, member's current deployment, communication with member during deployment, deployment to combat zone, impact of deployments on spouse and family life, and overall support from the military during deployments.
8. *Effect of Deployments on Children*—Identified child's deployment experiences, use of resources and programs during most recent deployment, spouse's need for child care during deployment, and child's coping ability.
9. *Reunion and Reintegration*—Timing of Service member's return, member's emotional and behavioral state after returning, member's ability to

reconnect with children upon return, and spouse's readjustment to member's return.

10. *Tempo*—Satisfaction with aspects of the tempo related to the member's military job.
11. *Programs and Services*—Spouse's use of available resources, preferred method of communication about programs and services, access to information related to military life, and transition assistance needs.
12. *Financial Well-Being*—Perceived financial condition, financial problems experienced, saving/investment habits, financial goals, emergency savings, total household monthly earnings and spouse's monthly earnings, and sources of income or financial support.
13. *Federal Voting Assistance Program*—Registered to vote in the November 8, 2016 election and requested/received/returned an absentee ballot for the November 8, 2016 election.

Population and Reporting Categories

The target population for the 2017 ADSS consisted of spouses of active duty members of the Army, Navy, Marine Corps, and Air Force, excluding National Guard and Reserve members, who were below flag rank. In addition, members of the sample became ineligible if they indicated they were divorced or widowed from the active duty member, or if the active duty member separated from service.⁵ Survey results are presented for the total DoD population and by a variety of reporting categories. To form the reporting categories for the tabulations, respondents are classified by administrative record data for member categories of Service, paygrade, and enlisted years of service. The remaining reporting categories are based on survey self-report. Definitions for reporting categories follow:

- *Member Service*—The categories include *Army*, *Navy*, *Marine Corps*, and *Air Force*.
- *Member Paygrade*—The *Enlisted* subgroup includes all enlisted paygrades (E1–E9). The *Enlisted* subgroup is broken into the following groups: *3 to 5 Years* (i.e., first-term decision window), *6 to 9 Years* (i.e., second-term decision window), *E1–E4*, and *E5–E9*. The *E5–E9* category is further broken into *E5–E6* and *E7–E9*. The *Officers* subgroup includes warrant officers and commissioned officers. Commissioned officers are detailed in two subgroups, *O1–O3* and *O4–O6*.

⁵ An active duty member married to another active duty member would be eligible for the survey depending on their spouse's status, not their own.

- *Member Deployment Status*⁶—*Not Deployed Career* includes spouses whose husband/wife had not been deployed for 30 consecutive days or more in their careers. *Deployed Career* includes spouses whose husband/wife had been deployed for 30 or more consecutive days in their careers. *Not Deployed Past 12 Months* includes spouses whose husband/wife had not been deployed in the preceding 12 months. *Deployed Past 12 Months* includes spouses whose husband/wife had been deployed in that time. This category is further broken down into *Currently Deployed*, which includes spouses whose husband/wife was deployed at the time the spouse submitted the survey; and *Deployed Multiple Times*, which includes spouses whose husband/wife had been deployed more than once in the past 12 months.
- *Spouse Gender*—This category is self-explanatory.
- *Spouse Education*—Respondents are classified based on self-reported educational attainment. *No College* includes those without any college credit. *Some College/Vocational Diploma* includes those with some college credit, including a two-year degree or a vocational diploma, but does not include those with a four-year degree. *4-Year Degree* includes those with a four-year degree and those with some graduate school, but no graduate or professional degree. *Graduate/Professional Degree* includes those with masters, doctorates, and other professional degrees.
- *Spouse Race/Ethnicity*—Respondents are classified based on self-reported categories consistent with requirements of the *Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity* (1997). *Total Minority* includes all persons marking one or more of the races other than White and/or marking that they are Spanish/Hispanic/Latino. *Non-Hispanic Black* includes persons marking only Black or African American and not reporting being Spanish/Hispanic/Latino. *Hispanic* includes anyone marking that they are Spanish/Hispanic/Latino, regardless of how they answered the question on race.
- *Spouse Age*—Categories include *Less Than 26 Years Old*, *26 to 30 Years*, *31 to 35 Years*, *36 to 40 Years*, and *More Than 40 Years Old*.
- *Spouse Employment*—Spouses are classified based on self-reports of employment status and membership in the Armed Forces. Categories include *Employed*, *Unemployed*, *Not in Labor Force*, and *Armed Forces Member*.

⁶ Member deployment status is based on spouse's survey responses.

- *Family Status*—Categories include *With Child(ren)* and *Without Child(ren)*.⁷
- *Child Demographics*—Respondents are classified based on self-report age of the child in their household whose birth month is closest to the respondent's birth month. Child age is divided into the following categories: *Less Than 6 Years Old*, *6 to 12 Years Old*, and *13 to Less Than 18 Years Old*.
- *Service by Paygrade*—The categories include each of the Services by enlisted and officer paygrade groups.

Survey Methodology

The web survey administration process began on June 15, 2017, with the mail out of notification letters to sample spouses. The notification letter explained why the survey was being conducted, how the survey information would be used, and why participation was important. Throughout the administration period, additional e-mail and postal reminders were sent to encourage survey participation. Data were collected between June 22, 2017 to November 13, 2017. Paper surveys were mailed on July 13, 2017, to those who did not respond via the web.

Single-stage, nonproportional stratified random sampling⁸ procedures were used. The sample consisted of the spouses of 45,077 members drawn from the sample frame constructed from DMDC's January 2017 *Active Duty Master Edit File*, December 2016 *Family Database*, January 2017 *Contingency Tracking System File (CTS)*, December 2016 *Basic Allowance for Housing Population File*, and March 2017 *Defense Enrollment Eligibility Reporting System (DEERS) Medical Point-in-Time Extract (PITE)*. Spouses of the sample became ineligible if they 1) were no longer on DMDC administrative files or 2) indicated in the survey or by other contact (e.g., telephone calls to the data collection contractor) that they were divorced, widowed, or their husband or wife was no longer on active duty as of the first day of the web survey, June 22, 2017 (0.4% of sample).

Completed surveys (defined as 50% or more of the survey questions asked of all participants were answered) were received from 6,827 eligible respondents. The overall weighted response rate for eligible responses, corrected for nonproportional sampling, was 17.2%.

Data were weighted using the industry standard process. This form of weighting produces survey estimates of population totals, proportions, and means (as

⁷ *Without Children* includes some percentage of spouses who may have children over 17 years old or who do not currently live in their home, therefore, child-related responses may appear in this category.

⁸ In stratified random sampling, all members of a population are categorized into homogeneous groups. For example, spouses might be grouped by the gender and Service of their husband or wife (e.g., spouses of all male Army personnel in one group, spouses of all female Navy personnel in another). Within each group, spouses of active duty members are chosen at random. Small groups are oversampled in comparison to their proportion of the population so there will be enough responses from small groups to analyze. Weights are used so that groups are correctly represented in the analyses.

well as other statistics) that are representative of their respective populations. Unweighted survey data, in contrast, are likely to produce biased estimates of population statistics. The process of weighting consists of the following steps:

- *Adjustment for selection probability*—Probability samples such as the sample for this survey are selected from lists and each member of the list has a known nonzero probability of selection. For example, if a list contained 10,000 spouses in a demographic subgroup and the desired sample size for the subgroup was 1,000, one in every tenth spouse of the list would be selected. During weighting, this selection probability (1/10) is taken into account. The base, or first weight, used to adjust the sample is the reciprocal of the selection probability. In this example, the adjustment for selection probability (base weight) is 10 for spouses in this subgroup.
- *Adjustments for nonresponse*—Some sampled spouses do not respond to the survey. Continuing the previous example, suppose only half of the sample spouses (i.e., 500 out of 1,000) completed and returned a survey. Because the unweighted sample size would only be 500, weights are needed to project the sample up to the subgroup population total (10,000). In this case, the base-weighted respondents would sum to only 5,000 weighted respondents. To adjust for nonresponse, the base weights are multiplied by the reciprocal of the response rate. In this example, the base weight (10) is multiplied by the reciprocal of the response rate (2) to create a new weight of 20. The weighted sample sums to the subgroup population total of 10,000.
- *Adjustment to known population values*—The first stage of weighting accounts for the unequal probabilities of selections while the second is based on population characteristics that are known to be correlated with response propensity. Because the sample design and adjustments for nonresponse cannot take into account all demographic differences related to who responds to a survey and how they respond, auxiliary information is used to increase the precision of survey estimates. For this reason, a final weighting adjustment is computed that reproduces population totals for important demographic groupings related to who responds to a survey and how they might answer the survey. Suppose in our example the population for the subgroup was 8,500 men and 1,500 women but the nonresponse-adjusted weighted estimates from the respondents was 7,000 men and 3,000 women. To reduce this possible bias and reproduce known population totals, the weights would be adjusted by 1.21 for men and 0.5 for women so that the final weights for men and women would be 24.3 and 10, which would give unbiased estimates of the total and of women and men in the subgroup.

Table 1 (pages 8–9) shows the number of respondents and the portion of total respondents in each reporting group. Also shown are the estimated number of respondents and the portion of total respondents in each reporting group. Differences

in the percentages of respondents and population for the reporting categories reflect differences in the number sampled, as well as differences in response rates.

Tabulation Procedures

Tabulations⁹ for each question in the survey are shown on a set of facing pages. The text of the questions and response options are shown at the top of the even-numbered pages. To compress the width of columns in the tables, the response options are shown with a number or letter; then, that number or letter is used as the column heading for the responses. The central feature of the tabulations is the percentage of spouses choosing the response options indicated by the column heading. Within a set of response options, percentages may not add to 100% due to rounding.

Where an item can be presented as an average, that average is shown as a number estimate and in a bar chart. The averages lend themselves to a quick scan for reporting groups differing from other similarly defined groups. Where a true response continuum is available (e.g., number of children), the mean of that continuum is presented; in other cases, the responses are averages of the numeric scales presented with the response options. Where there is a simple binomial response (e.g., yes/no), only one percentage is presented. In this case, the bar chart represents that percentage.

On each page of tabulations, the first column lists the reporting group shown in that row. The second column, *Percent Responding*, lists the portion of the reporting group represented in the estimates in that row. In most cases, if this percentage is not 100, it reflects item nonresponse, and the table note indicates “Percent responding are active duty member spouses who answered the question.”

Not all questions applied to every respondent. Respondents to the paper version of the survey were instructed to skip questions that do not apply to them (based on their answers to previous questions). Where possible, the web survey was programmed to skip respondents over questions that do not apply to them. For example, Q100 asks spouses whether their husband/wife’s most recent deployment had been to a combat zone. This question does not apply to those who marked in Q93 that their spouse has not ever been deployed. The table note for this question indicates that the “Percent responding are active duty member spouses who answered the question and whose husband/wife had been deployed (Q93).”

⁹ Details of data editing and preparation are provided by DMDC (2018a).

The survey does not always skip questions that do not apply to the respondents. In the tabulations, *Does not apply* responses are typically included in the percentages. For example, Q108 asked spouses if their need for child care changed as a result of their husband/wife's being deployed. Responses of *Does not apply, I have not used child care* were tabulated separately as responses to the constructed question, *Have you used child care while your spouse was deployed?*

Because the survey contains open-ended questions, not all responses are tabulated. For example, if spouses indicated that their husband/wife had been deployed in their career (Q93) and that they experienced *Other* problems not listed in the survey during their husband/wife's most recent deployment (Q102), they were asked to explain the other problems that they experienced. Since it is not feasible to tabulate the wide range of responses, the open-ended responses for Q102 are not tabulated.

Paper and Web Survey Comparability

On occasion, the web and paper versions of the survey differ. These differences result from the technological advantages and requirements available in a web-based survey. Question stems differ slightly between the web and paper versions of the survey. On the paper version of the survey, question stems will refer to specific survey items, whereas questions on the web version are not numbered. The web version of the survey contains additional survey items, as well as more open-ended questions.

In addition to variations in the question text between the paper and web versions of the survey, the survey response options also differ at times. A common difference between the surveys is the use of *Does not apply* response options on the paper version that are unnecessary in the web version due to "smart skip" technology. For example, in Q74 of the paper version, respondents are asked whether they feel their counseling experiences were beneficial. Spouses could mark either *Yes*, *No*, or *Does not apply; I have never seen a counselor*. On the web version of the question (Q82), respondents who had indicated that they had not seen a counselor either in the past six months or during their spouse's active duty career were automatically skipped over the question. In constructing the dataset that combines the paper and web respondents, the web version of questions was typically used. The responses to the paper-and-pen version of the questions were recoded to comply with the web version. Exceptions may occur when the tabulation of a survey item would benefit from presenting responses in a manner representative of the total population, as opposed to only the applicable population, by coding respondents who were skipped over the question to force their inclusion.

Combining Information From Multiple Items or Response Options

Tabulations in this volume generally present data for individual survey questions.¹⁰ There are four exceptions. The first type of exception is where the results for multiple items are presented on a single set of pages.

- Grouped subitems (e.g., Q68a–b) are presented together for ease of comparability between subitems. In Q68a-b, spouses were asked if they or their family members had any special medical (Q68a) or educational (Q68b) needs. In addition to a tabulation showing the percentage of those who indicated *Yes* to Q68a or Q68b, a composite tabulation shows the total percentage of those who indicated *Yes* to any of the subitems a-b. The proportion of members answering *Yes* on each subitem is calculated based on a denominator including members who answered *Yes* or who did not answer the subitem but answered at least one other subitem in the group. This type of coding is used on all grouped subitems throughout the tab volume because it permits presentation of multiple subitems on one page, with correct and complete percent responding information for all subitems.

The second exception is where spouses can provide multiple answers to a single question (e.g., race).

- In Q8, spouses were asked to mark one or more races. The tabulations show the percentage who responded that they were *White*, *Black* or *African American*, *American Indian* or *Alaska Native*, *Asian*, or *Native Hawaiian* or *Other Pacific Islander*. Respondents who indicated more than one race are also shown in the percentage of *More Than One Race* Marked. For example, if a respondent indicated they were *Asian* and *White*, they were counted in the percentage as *Asian*, *White*, and *More Than One Race*.

The third exception pertains to combining response options from a single item to present an aggregate number.

- For example, Q93 asked spouses if their husband/wife had been deployed for more than 30 consecutive days. Spouses could indicate *Yes, in the past 36 months*, *Yes, but not in the past 36 months*, or *No*. In addition to the tabulation showing the percentage of those who marked these response options, a composite tabulation shows the total percentage of those who responded to either *Yes* option and reflects *Percentage Deployed During Career*.

The fourth exception pertains to constructed composite measures (e.g., scales, incident rates, summary variables) described below. For example, an incident rate for financial problems was constructed from multiple items. With the exception of spouse

¹⁰ Demographic information based on member administrative data is also presented. For example, member Service and paygrade were constructed from administrative data.

employment, individual items in each measure are presented first, followed by tabulation pages showing composite measure results.

- *Employment Status*—Spouse employment indicators are derived from Q22–25 and are comparable to employment measures used in the U.S. Census Bureau’s *Decennial Census* and *Current Population Survey* (CPS). Two sets of tabulations are presented. In the first set, labor force participation is shown for the spouses of those in the reporting category. The four categories contain percentages of employed, unemployed, not in the labor market, and armed forces. Those not in the labor market includes those who are permanently or temporarily not working or not actively looking for work.¹¹ The second set of data shows only those in the labor market. That is, the percent responding are spouses who answered the items and are in the labor market (civilian employed, armed forces, and unemployed but looking for work). The unemployment rates shown in these tables are the percent of those who are actively looking for work and who are unemployed.
- *Attachment Behavior Index (AQS)*—The AQS is used to measure insecurity of children in military families. A benefit of the AQS is its applicability across a range of age groups from young toddlers to adolescents. The AQS has been shown to be a valid measure of a child’s markers of insecurity as indexed by the child’s behavior based around a specific caregiver. The scale is constructed from Q65a–f, with Q65a reverse-coded. Spouses must have responded to all of the subitems in the scale to be included. Scores are reported as a single figure, which is the average of the individual scores (range 1 to 5). Higher scores indicate higher levels of insecurity in children. For details, refer to Waters, Vaughn, Posada, and Kondo-Ikemura (1995).
- *Child Behavior Checklist*—The *Child Behavior Checklist* was created by OPA to capture potential problematic behaviors in children, including academic and behavioral problems. Traditional scales that capture these behaviors are difficult to use due to the range of ages this scale needed to cover (ages 0 to 17). OPA created this scale as a way of measuring problem behaviors across this age range. The scale is constructed from Q66a–g. Respondents must have answered all of the subitems in the scale to be included. Q66d, f, and g are reverse-coded in the construction of the overall score. The score is built by summing the presence/absence of the behavior (“yes” has the value 1 and “no” and “not applicable” have the value of 0). Scores are reported as a single figure, which is the sum of the individual scores (range 0 to 7). A higher score indicates a higher incidence of problematic behaviors.

¹¹ Those who have not actively looked for work in the past 4 weeks are considered to be out of the labor market. This category includes some percentage of spouses who are in the midst of a PCS move and, therefore, only temporarily out of the labor market.

- *Patient Health (PHQ-4)*—The *PHQ-4* is designed to identify potential mental health concerns by measuring the extent that spouses have felt negative emotions, such as depression, anxiety, or nervousness, in the two weeks before taking the survey. This scale is constructed from Q71a–d and spouses must have responded to all of the subitems in the scale to be included. Each item is rated on a 1 to 4 scale. Scores on the *PHQ-4* are reported as a single figure, which is the average of the individual scores. A higher total score indicates a higher likelihood of mental illness. For details, see Kroenke, Spitzer, and Williams (2001).
- *General Health*—The *General Health* scale is designed to provide a self-assessment of overall physical well-being. The four scale items (Q73a–d) were taken from the general health perceptions subscale on the Short-Form Health Survey (SF-36) of the Medical Outcomes Study questionnaire (Ware & Sherbourne, 1992). For the purposes of this report, Q73 b and c were reverse-coded. Respondents must have answered all items in the scale to be included. Scores are reported as a single figure, which is the average of the individual scores (range 1 to 4). Higher scores on this measure indicate members have more positive perceptions of their health.
- *Marital Instability Index (MII)*—An abbreviated version of the *MII* is used to capture the extent that respondents perceive problems in their marriages. The scale is constructed from Q77a–e and respondents must have answered all of the subitems in the scale to be included. Each item is rated on a two point scale (yes/no). Scores are reported as a single figure, which is the sum of the individual scores (range 0 to 5). A higher score indicates a greater amount of perceived problems within the marriage. For more details, see Edwards, Johnson, and Booth (2000).
- *Social Support Index (SSI)*—The *SSI*, derived from items Q88a–i, captures the degree to which spouses have a community or network of people, other than their spouse, who they can depend on and who can provide companionship and assistance. Respondents must have answered 100% of the subitems in the scale to be included. Scores are reported as a single figure, which is the average of the individual scores (range 1 to 5). A higher total score indicates greater perceived support. In addition, the *SSI* has four subfactors reviewed in the literature (McCubbin, Patterson, & Glynn, 1996). Two subfactors were included in the survey, including Community as a Source of Support (Q88b, e, f, g, and i; measures an individual’s belief that the community offers supportive resources during difficult times and that individuals feel secure living in the community), and Family Affection and Commitment (Q88a, c, d, and h; measures an individual’s belief that family members support and show affection for each other). Q88i is reverse-coded in both the construction of subfactor and the construction of the overall score. Scores are reported using the average of the subitems in each subfactor. Respondents must have answered all of the subitems within

each subfactor to be included in that specific score. Each subfactor included is presented as separate tab pages. Q88a is not a question in the traditional *SSI* but was added for the purpose of this survey. Principal component analysis indicated Q88a loaded significantly on the subfactor of Family Affection and Commitment and was therefore included in this group. For each subfactor, higher scores indicate higher perceived support in that specific area.

Margins of Error

The complex sample design required weighting to produce population estimates (e.g., percent female).¹² Because of the weighting, conventional formulas for calculating the margin of error will overstate the reliability of the estimate. For this report, variance estimates were calculated using SUDAAN[®] PROC DESCRIPT (Research Triangle Institute, Inc., 2013).

By definition, sample surveys are subject to sampling error from nonresponse (eligibility and completion). Standard errors are estimates of the variance around population parameters (such as percentages or means) and are used to construct margins of error (i.e., confidence interval half-widths). Estimated percentages and means in these tabulations are reported with margins of error based on 95% confidence intervals. In order to compress the data display, only the maximum margin of error (Max ME) for each reporting category is shown. That is, the tab volume shows only the largest margin of error for the percentages or means in each row. For each average shown in these tabulations, its margin of error is also printed.

The following reporting conventions are used:

- “0” indicates that no one in any reporting group selected the response option,
- NR indicates the estimate is *Not Reportable* and is suppressed because of low reliability. Estimates of low reliability are suppressed based on criteria defined in terms of nominal sample size (less than 5), effective sample size (less than 30), or relative standard error (greater than 0.225),
- NA indicates the question was *Not Applicable* because the question did not apply to respondents in the reporting category based on answers to previous questions,
- No Max ME is printed when all percentages in the row are shown as NR,
- No margin of error is printed for an average when it is shown as NR.

¹² As a result of differential weighting, only certain statistical software procedures, such as SUDAAN[®], correctly calculate standard errors, variances, or tests of statistical significance.

Note. Percent responding are active duty member spouses who answered the question, who had a child living at home (Q48), and who identified one child who was living at home (Q63). The scale ranges from 0 to 7. Higher scores indicate more problematic behaviors. Cronbach's coefficient alpha = 0.87. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

66. Child Behavior Checklist: Constructed from Q66. This scale measures problematic behaviors exhibited by a child in the past 12 months.

Note. Percent responding are active duty member spouses who answered the question. The scale ranges from 1 to 4. Higher scores indicate higher levels of depression, nervousness, and/or anxiety. Cronbach's coefficient alpha = 0.89. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

Note. Percent responding are active duty member spouses who answered the question. The scale ranges from 0 to 5. Higher scores indicate a higher level of marital instability. Cronbach's coefficient alpha = 0.83. Cronbach's coefficient alpha ranges in value from 0 to 1. Values 0.70 or greater indicate higher reliability meaning that the items are internally consistent.

77. Marital Instability Index (MII): Constructed from Q77. Index measures the extent that individuals perceive disruptions or problems in their marriages.

PRIVACY ACT STATEMENT & INFORMED CONSENT INFORMATION

Your name and contact information have been used only for the distribution of this survey. Your responses to the demographic questions will allow Department of Defense (DoD) to better analyze all responses among varying demographic groups. Responding to this survey is voluntary. Most people can complete the survey in 30 minutes. There is no penalty to you if you choose not to respond. However, maximum participation is encouraged so the data will be complete and representative.

ADDITIONAL INFORMATION

10 United States Code (USC), Sections 136, 1782, and 2358, authorize the DoD to conduct this survey. Reports will be provided to the Office of the Secretary of Defense, each Military Department, and the Joint Chiefs of Staff.

The Office of People Analytics (OPA) uses well-established, scientific procedures to randomly select a sample representing the Defense community based on combinations of demographic characteristics (for example, deployment status, Service, and gender). Your responses will be kept private to the extent permitted by law. This is your chance to be heard on issues that directly affect you. While there is no direct benefit for your individual participation, your responses on this survey *make a difference*.

Identifying information will be used only by government and contractor staff engaged in, and for purposes of, survey research. In no case will individual identifiable survey responses be reported.

The data collection procedures are not expected to involve any risk or discomfort to you.

Survey data may be shared with DoD researchers or organizations outside the DoD who are conducting research on DoD personnel. OPA performs a disclosure avoidance analysis to reduce the risk of there being a combination of demographic variables which can single out an individual.

Your responses could be used in future research. Results from these surveys will be posted to the web:
<http://www.dmdc.osd.mil/surveys>

If you answer any items in such a way that you indicate distress or being upset, etc., you will not be contacted for follow-up purposes. However, if you indicate a direct threat to harm yourself or others within responses or communications about the survey, because of concern for your welfare, OPA may notify an office in your area for appropriate action.

You may experience discomfort and/or other emotions while completing the survey. If this occurs, you may contact Military OneSource to find an appropriate helping professional.

FREQUENTLY ASKED QUESTIONS

What is the Military Spouse Survey Program?

- Military Spouse Survey is a DoD personnel program that features web-based surveys sponsored by the Under Secretary of Defense for Personnel and Readiness (USD[P&R]).
- Military Spouse Surveys are conducted by the Office of People Analytics (OPA).
- These surveys enable DoD to regularly assess the attitudes and opinions of the DoD community, including active duty and Reserve component members on the full range of personnel issues.

How do I know this is an official, approved DoD survey?

- In accordance with DoD Instruction 8910.01, all data collection in DoD must be licensed and show that license as a Report Control Symbol (RCS) with an expiration date. The RCS for this survey is RCS# DD-P&R(AR)2145, expiring 01/06/2022.

How did you pick me?

- OPA uses well-established, scientific procedures to randomly select a sample that represents the Defense community based on combinations of demographic characteristics (e.g., deployment status, Service, and gender).

Why should I participate?

- This is your chance to be heard on issues that directly affect you, including the impact of deployments on you, your spouse and children, your employment opportunities, medical and dental benefits, and overall satisfaction with military life.
- Your responses on this survey **make a difference**.

What is ADS-Survey@mail.mil?

- The official e-mail address for communicating with spouses of active duty members about Military Spouse Survey. "ADS-Survey@mail.mil" is short for Active Duty Spouse.

Why am I being asked to use the web?

- Web administration enables us to get survey results to senior Defense leaders faster.

Why are you using a .net instead of a .mil domain to field your survey?

- The survey is administered by our contractor, Data Recognition Corporation, an experienced survey operations company. The survey collection tool starts on a .mil site within the DoD. Once you enter your ticket number, you are redirected to a contractor site which uses a .net domain. This allows everyone to access the survey, even from a non-government computer.

Do I have to answer all questions?

- No, it is not necessary to answer every question. Within the survey screen, you have four control buttons: *Next Page* (→), *Previous Page* (←), *Clear Responses*, and *Save and Return Later*. Use these buttons to navigate through the survey or skip questions. Use *Save and Return Later* to give yourself flexibility to complete the survey at a convenient time. When you return to the survey website, enter your Ticket Number to get to the place in the survey where you had stopped.

Why does the survey ask personal questions?

- OPA reports overall results, as well as by other characteristics, such as location, and gender. To complete these analyses, we must ask respondents for these types of demographic information.
- Analyzing results in this way provides Defense leaders information about the attitudes and concerns of all subgroups of personnel so that no groups are overlooked.
- Sometimes sensitive questions are asked in order to improve personnel policies, programs, and practices. As with all questions on the surveys, your responses will be held in confidence.

Will my answers be kept private?

- Your response will be kept private to the extent permitted by law.
- All data will be reported in the aggregate and no individual data will be reported.
- We encourage you to safeguard your Ticket Number to prevent unauthorized access to your survey. In addition, to ensure your privacy, be aware of the environment in which you take the survey (e.g., take the survey when no one else is home, take care to not leave the survey unattended).

Can I withdraw my answers once I have started the survey?

- If you wish to withdraw your answers, please notify the Survey Processing Center prior to {CLOSEDATE} by sending an e-mail to ADS-Survey@mail.mil or calling, toll-free 1-800-881-5307. Include your name and Ticket Number.

Will I ever see the results of the survey?

- OPA posts survey results on the following website:

2017 Survey of Active Duty Spouses

PRIVACY ADVISORY

Your name and contact information have been used only for the distribution of this survey. Your responses to the demographic questions will allow Department of Defense (DoD) to better analyze all responses among varying demographic groups. Responding to this survey is voluntary. Most people can complete the survey in 30 minutes. There is no penalty to you if you choose not to respond. However, maximum participation is encouraged so the data will be complete and representative. **Returning this survey indicates your agreement to participate in this research.**

ADDITIONAL INFORMATION

10 United States Code (USC), Sections 136, 1782, and 2358, authorize the DoD to conduct this survey. Reports will be provided to the Office of the Secretary of Defense, each Military Department, and the Joint Chiefs of Staff.

The Office of People Analytics (OPA) uses well-established, scientific procedures to randomly select a sample representing the Defense community based on combinations of demographic characteristics (for example, deployment status, Service, and gender). Your responses will be kept private to the extent permitted by law. This is your chance to be heard on issues that directly affect you. While there is no direct benefit for your individual participation, your responses on this survey *make a difference*.

Identifying information will be used only by government and contractor staff engaged in, and for purposes of, survey research. In no case will individual identifiable survey responses be reported.

The data collection procedures are not expected to involve any risk or discomfort to you.

Survey data may be shared with DoD researchers or organizations outside the DoD who are conducting research on DoD personnel. OPA performs a disclosure avoidance analysis to reduce the risk of there being a combination of demographic variables which can single out an individual.

Your responses could be used in future research. Results from these surveys will be posted to the web: <http://www.dmdc.osd.mil/surveys/>

If you answer any items in such a way that you indicate distress or being upset, etc., you will not be contacted for follow-up purposes. However, if you indicate a direct threat to harm yourself or others within responses or communications about the survey, because of concern for your welfare, OPA may notify an office in your area for appropriate action.

You may experience discomfort and/or other emotions while completing the survey. If this occurs, you may contact Military OneSource to find an appropriate helping professional.
