I. INTRODUCTION

A. MOTIVATION

Identifying and promoting talent is key to increasing efficiency and productivity in any organization. This is particularly important for the Navy and US Military because individuals are promoted from within the system and there is less scope to hire individuals into higher level positions. To that end Navy talent management has received considerable attention in recent years with growing calls for modernizing the evaluation system (Department of the Navy, 2021), which went through a last major overhaul in the 1990s (Cordial, 2017). In line with these efforts, the Navy released a new online performance evaluation interface, eNavFit, in February 2022 replacing the legacy NAVFIT98 system (Swysgood, 2022). With the Navy considering further changes, this project offers a valuable and timely assessment of the current Navy performance evaluation system drawing on an across-services comparison of evaluation forms, focus group feedback from Navy subject matter experts (SMEs), and a survey of proposed reforms.

Many studies have looked at military performance evaluation ranging from small interviews of SMEs such as Hardison et al. (2015) to more data intensive analysis of individual evaluations such as Larger (2017) with both types of studies highlighting issues surrounding performance evaluations.¹ Drawing on comparisons with civilian practices and the United States Marine Corps (USMC) system respectively, Small (2020) and Ellison (2014) summarize key problems with the Navy system. In particular, Small (2020) identifies the dated NAVFIT98 interface, poor transparency, low quality feedback to sailors, and a culture of inflation.

Inflating evaluations is not unique to the current system or the Navy. As early as 1924, inflation was a problem: "It is generally remarked that boards of selection find all reports of fitness almost equal and uniformly good, so that judging solely by fitness reports it is almost impossible to distinguish the exceptionally able officer from the average officer" (Cordial 2017). Baker (2007) and Wolfgeher (2009) document similar problems

¹ See Chapter IV of Faber (2022) for a detailed literature review of performance evaluation studies in the US military.

of inflated evaluations in the Air Force. And, Evans and Robinson (2020) find problems of accuracy in a sample of Army performance evaluations. Indeed, the idea of forced distribution, which restricts the number of top promotion recommendations, tries to address inflation, and increase the accuracy of the evaluation. Yet, for the Navy, this solution leads to lower quality feedback to sailors. The Navy system also falls short in using career coaching, peer assessments, and bottom-up reviews as is common in civilian organizations (Small 2020).

Building on these studies, our project takes a three-pronged approach to evaluating the Navy system. First, we compare key features of the Navy evaluation instruments to those used by the other services. Second, drawing on this comparative exercise, we conduct focus groups of Navy SMEs to solicit their feedback on (1) the current system and (2) their top recommendations to address issues with the performance evaluation system. Third, we use the SME recommendations as inputs in a survey where Navy personnel (enlisted sailors and officers) evaluate and rank the different recommendations for reform along five dimensions: increased feedback to sailors; increased honesty and accurate assessment of sailors; increased clarity for personnel decisions; increased ease of use; and increased alignment with Navy expectations.

B. FINDINGS

To assess the current system, we begin by comparing the Navy evaluation instruments namely Fitness Reports (FITREPs) and Evaluations (EVALs) to the evaluation forms used by the other services. The Navy FITREP/EVAL instruments share many common features with those of other services. All the services document similar information on the ratee, rater, background information, and the traits used for individual evaluation. Yet, the Navy is unique on some fronts. First, the Navy uses coarser measures of physical fitness unlike the Army and USMC. Second, the Navy uses fewer forms tailored by rank unlike the Army and Coast Guard that have multiple forms for different ranks. Third, the Navy offers fewer narrative options for evaluating individual traits and does not use multiple raters and reviewers like the other services. While some commands and ranks may incorporate more than one reviewer, the process is informal in the Navy especially on the officer side.

Fourth, the Navy conflates performance on individual traits with the comparative assessment of a ratee. This diminishes the quality of the feedback received by sailors. Unlike the other services, the Navy instrument generates an average of performance using the scores of the individual traits, which is then summarized against the reporting senior's cumulative average (RSCA). In contrast, raters in the Army, Coast Guard, and Marine Corps perform a separate comparative assessment of the rate without using the average of the individual trait evaluations. While the Marine Corps generates a scaled version of an individual trait average, there are differences from the Navy. The USMC uses fourteen traits evaluated on a seven-point scale including one on performing evaluations accurately and honestly. Moreover, they ask reporting seniors to comment on and justify individual trait ratings, especially high ratings. They also use a comparative "Christmas tree" where reporting seniors mark where a Marine stands relative to their peers. Excluding the few very unsatisfactory service members (who make up the narrow "trunk," the pyramidal shape of the tree discourages inflating the performance of their subordinates. Finally, the Air Force is unique among the services in using two separate forms, one for evaluation and another one for the promotion recommendation.

Building on this across service review of evaluation forms, we conducted twelve focus groups in 2021 with 52 Navy promotion board members soliciting their feedback on what works and what does not work with different aspects of Navy performance evaluation and their top recommendations for change. Beginning with the recommendations, focus group participants identified four areas in need of major overhaul. First, many participants recommend rating or community specific evaluations with each rating or community defining their "best and fully qualified" that enables an absolute comparison to a standard. Second, respondents recommend replacing the promote (P), must promote (MP) and early promote (EP) system coupled with forced distribution to a system whereby reporting seniors write a letter to the board with their promotion recommendation, while the evaluation instrument offers feedback to the individual. This is similar to the Air Force practice. Third, in every focus group, respondents complained about the culture of over inflation in the narrative write up. They recommend a major overhaul to the Navy culture that would instill more honesty in the write up and evaluation of an individual. Finally, on the administrative side, respondents recommend a fully electronic and responsive digital system with more space for the narrative write up.

Regarding specific aspects of the Navy instruments, most respondents said reporting seniors do their best with the current system in documenting past performance with many reporting less satisfaction with documenting future potential on the forms. Respondents were split on their assessment of the Navy's system of forced distribution and ranking with some arguing it allows for comparisons across different reporting seniors and guards against over inflation, and others arguing that less experienced reporting seniors mis-manage their RSCA in early years hurting individuals under their command in later years as they learn to better manage their average. Better training of junior officers by senior officers would ameliorate these problems according to some respondents.

Most respondents did not endorse moving to a binary trait evaluation like the Air Force of meeting a standard versus not meeting a standard. Similarly, we had agreement among the focus group respondents that the benefit of using multiple raters or reviewers like the other services was not worth the administrative burden. There was also agreement on the value of effective midterm counseling, which they argued is very inconsistently practiced across commands. Finally, respondents argued that annual evaluations are sufficient in frequency though some expressed misgivings about the current periodicity whereby all O-3s for example are evaluated in January regardless of their length at that command.

Using this feedback, we surveyed a larger and more representative group of enlisted and officer personnel asking them to rank the recommendations proposed by the Navy SMEs in the focus groups. Our survey respondents are slightly older and include more officers than the Navy average. That said, the share of female and minority respondents are very close to the overall Navy numbers. Around 19% of our respondents are female across both enlisted and officer respondents. This is marginally below the overall Navy share of 21% female. Moreover, the share of minority respondents at 40.3% for enlisted ranks and 24% for officer ranks is almost identical to the Navy share of non-Whites at 40.1% and 24% as of the June 2022 Total Force Demographic Report for the Navy. Before asking respondents to evaluate the proposed changes, we asked a series of questions to capture current sentiment regarding the Navy evaluation system. The responses were very concerning with most respondents expressing negative views about the current system. For example, only 18% of enlisted respondents agree that the evaluation ensures the best and fully qualified are promoted compared to 31% for officers. The only dimension where the majority had a positive response was regarding timely completion of evaluations with 40% of enlisted and 64% of officers agreeing that their evaluations have been processed on time. The most important demographic predictor of differences in views regarding the current system is officer versus enlisted sailor status with enlisted personnel holding more negative views of the evaluation system compared to officers. This holds true even for differences in opinions regarding the proposed reforms. We do not find significant differences in views by gender or race for current perceptions of the system and the proposed changes.

Turning to the proposed reforms, we found no dominant popular or unpopular reforms to improve either "feedback to sailors" or "honest and accurate assessment". Officers marginally preferred the option of focusing one part of the FITREP/EVAL on honest feedback to help sailors learn and develop under reforms to improve "feedback to sailors." They also marginally preferred reform to make it easier to submit adverse reports under "honest and accurate assessment." Under the domain of "clarity for personnel decisions," the winner was changing the timing of evaluations to allow for a period of time after a sailor has moved to a new command. This was also supported by the text responses where many respondents argued the current system prioritizes seniority over merit when an O-3 for example that has transferred to a new command in November is evaluated with other O-3s that have been at the same command for an entire 12 months when all the O-3s are evaluated in January.

Under the same category of "clarity for personnel decisions", the least popular proposed reform is to reduce the number of competitive categories for officers to unrestricted line, restricted line, and staff corps. For increased "ease of use," most respondents dislike the idea of allowing promotion board members to review records prior to arriving at the selection boards. Finally, for increased "alignment with Navy expectations," respondents are nearly unanimous in rejecting the proposal to periodically change the evaluation forms to include priorities of the CNO, while the most popular reform by far is to provide consistent and centralized training to reporting seniors in writing evaluations. The focus group respondents also emphasized better training with recommendations for how and when such training should occur.

Based on the across service comparison, focus group and survey feedback, we recommend the Navy (1) consider separating the individual evaluation of traits from the comparative assessment and potential piece of the evaluation, (2) offer better training lead by experienced reporting seniors on writing clear, honest and informative evaluations, (3) change the timing of evaluations such that summary groups do not include individuals that have served for widely different lengths of time under the same reporting senior, (4) formally incorporate more reviewers or raters in the evaluation process, and (5) reduce the administrative burden of the evaluation process. The new eNavFit is a step in the right direction to reducing this burden. Finally, we recommend the Navy must analyze the effects of any reforms as they are rolled out allowing for changes and updates to correct issues as they are discovered. This would enable more dynamic talent management as opposed to fixing issues as part of major overhauls that occur once every 20 years or so.

The rest of the report is organized as follows. Chapter II compares the Navy evaluation instruments to the other services. Chapter III summarizes the focus group findings, while Chapter IV summarizes the survey findings. Chapter V concludes with our recommendations for reforms to the current system.

II. SERVICE COMPARISON OF PERFORMANCE EVALUATION FORMS

This section briefly describes the instruments used to evaluate officers, namely fitness reports (FITREPs), and enlisted personnel, namely evaluations (EVALs) in the US Navy. It then compares the key features of the Navy instrument with the other services. This discussion is based on instructions and policies as of February 2022 before the official roll out of eNavFit. We touch upon the changes introduced by eNavFit after describing the evaluation forms.²

A. US NAVY FITREPS AND EVALS

According to Navy instructions, the evaluation forms "serve as a guide for the member's performance and development, enhance the accomplishment of the organization mission and provide additional information to the chain of command" (CNO, 2019, p. I-1). This instruction highlights the dual purpose of the evaluation forms, namely, to inform sailors of their performance, and to inform promotion boards along with other chain of command about a sailors' performance. The Navy uses three evaluation forms: officer FITREPs for ranks W1-O6, enlisted EVALs for enlisted ranks E1-E6, and chief evaluations (CHIEFVALs) for enlisted ranks E7-E9 (CNO, 2019). The officer FITREPs are completed by their reporting seniors, namely their COs or the Officer in Charge (OIC), while EVALs are completed by raters and senior raters. We begin the discussion with the officer FITREPs.

On a FITREP form, the first 27 blocks ask for administrative information on the ratee namely their grade/designation, unit, rater, the occasion for the report (periodic, detachment of individual, detachment of reporting senior, or special), period of report, type of report, physical readiness, billet sub-category, and the name, rank, grade, and unit of the reporting senior. Block 28 offers ratees a chance to describe their command employment and achievements followed by their primary/collateral/ watchstanding duties in Block 29 (CNO, 2019). Blocks 30 to 32 document the date of midterm counseling. The guidance is

² This section draws on LT Faber's thesis, "Improving the Navy's Performance Evaluation System with Successful Practices", which was advised by the authors of this report and completed in March 2022 (Faber, 2022).

for midterm counseling to be conducted halfway through a sailors' evaluation cycle (CNO, 2019).

The next set of blocks (33 to 39) relate to an individual's performance evaluation. Officers are evaluated on seven traits using a five-point scale ranging from 1 (below standards), 2 (progressing), 3 (meets standards), 4 (above standards), and 5 (greatly exceeds standards). The seven traits evaluated are (1) professional expertise, (2) command or organizational climate/equal opportunity, (3) military bearing/character, (4) teamwork, (5) mission accomplishment and initiative, (6) leadership, and (7) tactical performance for those who are warfare qualified (CNO, 2019). Reporting seniors use the average rating across the seven traits to rank individuals against their peers of the same rank (CNO, 2019).

The next three blocks (40-42) pertain to promotion potential. In block 40, reporting seniors make recommendations on the next two career milestone, in block 41 reporting seniors comment on an individual's performance with an 18-line limit, and in block 42 reporting seniors note their promotion recommendation on a 5-point scale ranging from "significant problems", "progressing", "promotable" (P), "must promote" (MP), and "early promote" (EP). The highest recommendation is EP. To reduce grade inflation, the Navy restricts the number of EP and MP recommendations a reporting senior can give based on the reporting senior's span of control and the ratee's rank (CNO, 2019). Block 43 lists the summary group in each recommendation category. Typically, officer summary groups are individuals of the same pay grade, promotion status, and competitive category being evaluated by the same reporting senior on the same date (CNO, 2019). Promotion boards compare the promotion recommendation of an individual against the summary group, for example, is the individual the sole recipient of an EP in a summary group of six where the reporting senior gave 3 Ps, 2 MPs and 1 EP.

Block 45 is space for the reporting senior signature, date, the ratee's trait average, and the summary group average followed by Block 46 where there is an option for the ratee to submit a statement about their report, or not. Appendix Figure 1 shows the two pages of the FITREP.

For enlisted personnel, the EVAL form is like the FITREP with the same administrative blocks. It also evaluates individuals using a five-point scale on four traits common to the officer FITREP (command or organizational climate/equal opportunity, military bearing/character, teamwork, and leadership) and three other traits unique to the EVAL (professional knowledge, personal job accomplishment/initiative, and quality of work). The EVAL has two narrative blocks, one for a reporting senior to comment on an individual's performance like the FITREP and a second block to record qualifications/achievements (CNO, 2019). Unlike FITREPs, EVALs involve two raters, a senior rater and reporting senior (CNO, 2019). Appendix Figure 2 shows an EVAL form. Finally, the CHIEFEVAL form is like the officer FITREP, except for the seven traits being evaluated. For CHIEFEVALs, they are (1) deckplate leadership, (2) institutional and technical expertise, (3) professionalism, (4) loyalty, (5) character, (6) active communication, and (7) sense of heritage (CNO, 2019). Appendix Figure 3 shows a CHIEFEVAL form.

Under the legacy system, the forms were completed using a form-filler computer application known as NAVFIT98A (CNO, 2019). This required hard copies of forms to be printed, signed, and mailed to Navy Personnel Command in Tennessee. eNAVFIT is the new online system released in February 2022 that can be accessed through the BUPERS web portal (BOL). It allows for online input, review, digital signatures, and electronic submission (Swysgood, 2022). It also allows reporting seniors to designate a trusted agent who can complete administrative tasks on behalf of a reporting senior. While the content of the evaluation forms is the same, the new system is a big step forward in reducing the administrative burden of performing evaluations.

B. ACROSS SERVICE COMPARISON IN EVALUATION FORMS

We now compare the US Navy evaluation instruments to those used by the other services to identify common practices across the services and potential differences the Navy may want to consider as they update their performance evaluation system. Given the many evaluation forms used across the services, we restrict our focus to similar ranks as covered by the Navy EVALs and FITREPs. In cases where other services use multiple rank-specific forms, we select one representative form. To that end, we focus on the USMC FITREP used to evaluate ranks E4-O8 (Appendix Figure 4), Army Officer Evaluation Report used to evaluate ranks O1-O3/WO1-CW2 (Appendix Figure 5), Army Non-Commissioned Officer Evaluation Report SSG-1st/MSG (Appendix Figure 6), Air Force Officer Performance Report O3-O5 (Appendix Figure 7), Air Force Enlisted Performance Report E1-E6 (Appendix Figure 8), US Coast Guard Officer Evaluation Report W2-W3/O3-O5 (Appendix Figure 9), US Coast Guard Enlisted Evaluation Report for Third Class Petty Officer E4 (Appendix Figure 10).³

We begin by comparing the informational features of the representative forms by service as shown in Table 1 below. The services vary in whether they use the same form to evaluate multiple ranks, or whether they use multiple forms to better tailor the evaluation to the rank. On one end is the US Coast Guard that uses different forms for the different enlisted ranks. On the other end are the Navy and Air Force that use a single form to cover multiple officer ranks up to O-6. Apart from the USMC FITREP and US Coast Guard Enlisted Evaluation Report, the length of the Navy evaluation form is similar to the other services. In terms of basic information, the forms all document the name, rank, and unit of the ratee, along with the rater's information, the period of the report, and reason for the report. Apart from the USMC and US Coast Guard, the other services require annual performance evaluations for their enlisted and officer personnel like the US Navy. USMC and US Coast Guard use semi-annual evaluations for their officers of rank O1-O2. While this may create additional administrative burden, it provides more regular and timely feedback to junior officers.

³ Our summary does not include the new USMC Junior Enlisted Performance Evaluation System (JEPES) for Marines of ranks E1-E4. Please see Faber (2022) for details on the specific policy instructions of the other services' performance evaluation forms.

	USN FITREP	USN EVAL	USA OER	USA NCOER	USMC FITREP	USAF OPR	USAF EPR	USCG OER (e.g. W2- W3/O3-O5)	USCG EER (e.g. E4)

Number of pages	2	2	2	2	6	2	2	2	5
Basic Info (name, grade/rank, date, nuit info, rater's info, report period, reason for report, etc.)	Ycs	Ycs	Yes	Ycs	Ycs	Үся	Ycs	Yes	Yes
Physical Fitness	Pass/Fail	Pass/Fail	Pass/Fail., Height, Weight, Within Standard?	Pass/Fail., Height, Weight, Within Standard?	PFT/CFT scores/Height/ Weight/Body Fat	No	No	No	No
Duty Assignment	Yes	Yes	Ycs	Yes	Yes	Yes	Yes	Yes	No
Billet Description, Duties & Accomplishments	Yes	Yes	Yes	Yes	Yes	Үся	Yes	Yes	No
Qualifications	No	Yes	No	No	Rifle	No	Education milestones (i.e. PME)	No	No
Duty Preferences	No	No	No	No	Yes (Top 3 Choices)	No	No	No	No

On the physical fitness front, the US Army and USMC document more information on the ratee such as their height and weight. In the case of USMC, they also document body fat. In contrast, the Navy only documents whether the ratee passed or failed their physical fitness test, while the Air Force and Coast Guard do not document physical fitness in their evaluation. All the services document the duty assignment and duties associated with the billet apart from the Coast Guard Enlisted Evaluation Report. Yet, the services are inconsistent in documenting ratee qualifications with only the USMC and Air Force Enlisted Progress Report listing a block for qualification. Unlike the other services, the USMC is the only service to ask individuals for their choice of top three duty preferences.

This review suggests the Navy documents similar information on ratees in their evaluation forms. Two areas of difference are (1) the Navy reports a coarse measure of physical fitness (Pass/Fail) unlike the Army and USMC, and (2) the Navy uses fewer tailored forms separated by rank unlike the Army and Coast Guard.

Table 2 summarizes the across-service differences in traits, rating scales, and raters. Unlike Table 1 where the informational portion of the Navy forms were like the other services, the traits portion of the Navy form differs from the other services in two fundamental ways. First, every other service offers space for narrative comments to justify the trait evaluations. The Air Force Officer Performance Report is the only other exception. Second, the other services use multiple raters unlike the Navy that relies on a single reporting senior for their officer FITREP. It may well be the case that additional raters in the Nay may serve as reviewers, or authenticators, like in the other services. Nonetheless, their presence is a formal part of the evaluation form of other services with space for additional rater/reviewer comments.

	USN FITREP	USN EVAL	USA OER	USA NCOER	USMC FITREP	USAF OPR	USAF EPR	USCGOER (e.g. W2- W3/03-05)	USCGEER (e.g. E4)
T rails	7 traits	7 traits	6 Traits	6 Traits	14 traits in 5 calegories	6 traits	3 trait categories with a total of 12 sub-traits	18 traits in 3 categories	13 traits in 4 categories, 1 additional trait on "conduct"

Traits - Narrative Option	No	No	Yes	Yes	Yes	No	Yes	Yes	Yes (limit to 2 lines max)
Rater(s)	Reporting Senior	Rater and Reporting Senior	Rater, Intermediate Rater, and Senior Rater	Rater and Senior Rater, Supplementary Review (if Required)	Reporting Senior, Reviewing Officer	Rater, Additional Rater, Reviewer	Rater, Additional Rater, Reviewer, Final Evaluator	Supervisor evaluates and Reviewing Officer authenticates	Supervisor, Marking Official, and Approving Official

Regarding the number of traits evaluated, the Navy is middle of the pack with seven traits slightly above six traits on the Army and officer Air Force forms, yet below the 14 and 18 traits on the USMC and Coast Guard Officer Evaluation Report forms. Both the USMC and the Coast Guard use a seven-point scale for most traits, the Army uses a fourpoint scale, and the Air Force uses a binary scale (met/does not meet standard) on Officer Performance Reports and a five-point scale for Enlisted Performance Reports like the Navy forms. Table 3 lists the specific traits evaluated by each service. In the table the colored boxes are unique traits specific to a single service evaluation form. There are many common themes across the services such as traits evaluating leadership, teamwork, and character with some differences. For example, the Navy is the only service evaluating tactical warfare, which evaluates warfare qualified Officers on their basic and tactical employment of weapons systems. The Navy CHIEFEVAL is the only form evaluating "loyalty" and "sense of heritage." The Air Force is the only service evaluating organizational skills. Others that are also unique to Air Force Enlisted Performance Reports include "motivation," "qualification & certifications," "compliance to standards," and "service core values," while traits like "adaptability," "competence," "speaking," "writing," and "health & well-being" are unique to the Coast Guard Officer Evaluation Report. Finally, the Marines are unique in evaluating people on the conduct of their evaluations.

Table 4 summarizes the across-service differences in the overall performance assessment, promotion recommendation, and future potential of the service member. Like the Navy, the USMC is the only other service that generates a measure of overall assessment by averaging across the individual trait scores. Army raters assess overall performance on a separate four-point scale (the highest rating of "Excels" is restricted to 49% to prevent inflation among officers) like enlisted raters in the Air Force, while the Coast Guard and officer raters in the Air Force use narratives to document overall performance. Even the services that assess overall performance using a trait average or another scale have narrative blocks for raters to discuss their overall assessment of the ratee.

	TABLE 4: A CROSS SERVICE COMPARISON OF PERFORMANCE ASSESSMENT AND PROMOTION											
	USN FITREP	USN EVAL	USA OER	USA NCOER	USMC FITREP	USAF OPR	USAF EPR	USCG OER (e.g. W2- W3/03-05)	USCGEER (c.g. E4)			
Overall Performance Assessment	ladividual Trait A verage	Individual Trait Average	Overall Performance on a 4-point scale with "Excels" restricted to 49% of summary group (Excels, Proficient, Capable, Unsatisfactory)	Overall Performance on a 4-point scale (Far Exceeded Standard, Exceeded Standard, Met Standard, Did Not Meet Standard)	Individual Trait Average, Scaled	Overall assessment block for each rater	Overall assessment on a 5-point scale, (Not Raied, Met some but not all expectations, Exceeded some, but not all expectations, Exceed most, if not all expectations)	No	No			
Space for Narratives	Space for RS to comment on performance	Space for RS to comment on performance	Space for Rater to discuss each trait and overall performance, and senior rater's comments on overall potential	to discuss each trait and overall performance, and senior rater's comments on	Space for RS to discuss each trait categories and additional comments, space for RO to supplement comparative assessment	Space for overall assessment block for each rater	Space for additional rater, reviewer, final evaluator, and functional examiner	Space after each trait sections, reporting officer comments	Space in each sections of the traits			
Promotion Recommendation/ Advancement Potential	P/MP/EP and 2 future assignments	P/MP/EP and 2 future assignments	3 future successive assignments	2 future successive assignments and 1 broadening assignment	Yes/No/NA	No, Separate Promotion Form	Up to 3 future roles, Scale of Do Not Promole, Not Ready Now, Promole, Must Promole, Now	6-point scale (Below zone select, In-zone reorder, Promole wAop 20% peers, Promole, Promolion potential, Do not promole)	3-point scale (Ready, Not Ready, and Not Recommended)			
Potential	No	No	4-point scale with *Most Qualified* restricted to 49% of summary group (Most Qualified, Highly Qualified, Not Qualified, Not	4-point scale with *Most Qualified* restricted to 24% of summary group (Most Qualified, Highly Qualified, Not Qualified, Not	Comparative Assessment, Christmas Tree (Einimethy Qualified, One of the Few Exceptionally Qualified, One of the Many Qualified, A Qualified, A Qualified, A	No	No	Comparative Assessment (Best officer of fhis grade, One of the few distinguised officers, one of the many high performing officers, Manginally performing officer, Unsatisfactory)	Narrative space to make comments			

One advantage perhaps of using narratives and a separate scale for overall assessment is it encourages more honesty in the evaluation of the individual traits. As we describe in the next section, the Navy system of documenting and using a trait average has led many raters to reverse engineer their evaluation, i.e., the rater first decides whether they want to score the ratee above or below their RSCA and then answers the individual trait

questions to generate that desired average. The USMC partially gets around this issue by (1) including a trait on "Fulfillment of Evaluation Responsibilities" where Marines are evaluated on the "extent to which this officer serving as a reporting official conducted, or required others to conduct, accurate, uninflated, and timely evaluations," and (2) a comparative assessment of an individual that is separate from the trait average.

Promotion recommendations differ somewhat across the services. As described above, the Navy relies on its five-point ranking (significant problems, progressing, promotable, must promote, and early promote) with forced distribution. Like the Navy, the Air Force uses a five-point ranking with forced distribution on their enlisted forms (do not promote, not ready now, promote, must promote, and promote now). On the officer side, the Air Force introduced a new one-page promotion recommendation form, separate from the evaluation with a three-point ranking of definitely promote, promote, and do not promote this board. The Coast Guard uses a three-point ranking (ready, not ready, and not recommended) for enlisted personnel, and a six-point scale for their officers. In contrast, the Marines use a binary yes or no recommendation for promotion, while the Army asks raters to list future assignments like the Air Force and Navy without any ranking.

Neither the Air Force nor the Navy asks for a separate assessment of potential. In contrast the Army, Marine Corps, and Coast Guard Officer Evaluation Report forms ask raters to comment on potential using a comparative assessment ranking with visual cues in the case of the Marine Corps and Coast Guard. Such cues help alleviate grade inflation concerns. In contrast, the Army addresses grade inflation by only allowing raters to assign the highest ranking of "most qualified" to 49% of a summary group.

This review suggests the Navy forms differ and perhaps fall short in a few dimensions compared to the other services. Unlike the other services, the Navy does not offer raters narrative blocks in support of the individual trait evaluations and the Navy does not consistently use multiple raters and reviewers. While multiple reviewers may be reviewing the performance evaluation forms in the Navy, the process is at least not formalized especially on the officer FITREPs.

The Navy structure also appears to conflate the evaluation, promotion recommendation, and potential/comparative assessment of sailors. This leads to sailors

getting less feedback on their performance than in the other services. For example, raters in the Army, Coast Guard, and Marine Corps perform a comparative assessment of the ratee on their potential without drawing on the individual trait evaluations, or its average. They use different tools to guard against inflation, namely visual cues and forced distribution. While we would expect these measures (trait evaluations and comparative assessment/potential) to be correlated, the evaluation instrument should not use the same measure to perform two functions namely evaluation of individual traits that generate an average, which in turn is used to rank individuals. This leads to perverse incentives. Since the comparative assessment in the Navy uses the ratees' trait average, many raters perform the individual trait evaluation *after* they decide a ratees' comparative ranking and need the trait average to match that ranking. This lowers the quality of the feedback on the individual trait evaluations. Any update to the Navy performance evaluation system must consider separating the comparative assessment/potential from the individual trait evaluation. While the Air Force does not offer a comparative peer assessment on potential, they use a separate ranking for the overall performance assessment.

To complement this across service comparison of evaluation forms, we spoke to Navy SMEs on their assessment of the Navy system and recommendations for change. We drew on the experience of other services in our focus group discussions with Navy experts. and turn to these results in the next section.

III. NAVY FOCUS GROUP RESULTS

In this section, we describe our focus group participants, the questions we asked, and a summary of the findings. Our goal for the focus groups was to solicit feedback and recommendations from a large group of Navy stakeholders and SMEs that were both reporting seniors and promotion board members. Apart from being evaluated, such individuals would have the knowledge and experience to offer valuable feedback on what works and what does not work with Navy Performance Evaluation.

A. BACKGROUND

We drew our pool of participants from the members of the following FY22 promotion boards in particular, (1) Active-Duty Master Chief Petty Officer (MCPO), (2) Active-Duty Lieutenant Commander (O4) Line and Staff, (3) Active-Duty Captain (O6) Line and Staff, and (4) Reserve Lieutenant Commander (O4) Line and Staff boards. Our thesis student, LT Faber first pulled the list of board members from the <u>MyNavyHR</u> site and then retrieved the email addresses of the board members from the Navy/Marine Corps Intranet (NMCI) system. We then randomly selected a pool of 120 members from this master list and sent an introductory email requesting participation. Out of the 120 solicitations, 52 members (43%) agreed to participate in our focus groups with 29 individuals of rank E-9 of different ratings and 26 individuals of ranks O-5 and O-6 from various communities. Around 12% of the respondents were women (6), which is lower than the Navy average. Although few participants chose to keep their cameras turned off.

Drawing on this group, we conducted twelve focus groups of an hour duration each with three to six participants in each group between November 15, 2021, and December 3, 2021. All the focus groups were hosted virtually on the Microsoft Teams platform. To ensure candid feedback, we did not record the sessions and guaranteed anonymity to the participants. One of us lead each session with a student acting as the primary note taker. Since our participants were drawn from many ratings and communities with decades of

service, these discussions lead to detailed, sometimes critical, yet nonetheless valuable and frank feedback.

We began each focus group by thanking the participants and ensuring them that their views would be summarized without any attribution. We then asked for their views on (1) the effectiveness of documenting past performance and future potential in the FITREPs/EVALs, (2) the evaluation of traits, (3) the role of multiple raters, (4) midterm counseling, and (5) periodicity. We concluded each focus group by asking participants for their top three recommendations for change if they were Chief of Naval Operations (CNO) for a day. We reversed the order of questions and asked the CNO question earlier in later focus groups.

B. FINDINGS

Past Performance and Future Potential

In response to the first question on evaluating past performance and future potential in the FITREPs and EVALs, most respondents said reporting seniors do a good job documenting past performance. More experienced officers offered a nuanced view namely that reporting seniors learn to share their feedback within the existing system with its flaws. Such respondents related this to the issue of "forced distribution" whereby reporting seniors are only allowed to give a fixed number of early promotes (EP) and must promotes (MP). While this ensures reporting seniors are judicious in their evaluation of a candidate, inexperienced officers sometimes are uncertain about assigning their EPs and MPs. Many respondents also blamed inexperience for inflated RSCAs in early years, which forced reporting seniors to "better manage" their RSCA in later years potentially hurting ratees.

In contrast to past performance, the respondents were more negative in their views on the FITREPs/EVALs capturing future potential. We often heard "we don't do a good job documenting future potential, "currently, there's no way to measure future potential with the current system" and similar sentiments. Many respondents expressed that Block 40 on the recommendation for the next career milestone and Block 41, the narrative summary, are insufficient to measure future potential for officers. Some respondents thought 18 lines for the narrative summary is insufficient in Block 41 and

19

more space would be useful. Others expressed misgivings about giving more space because many reporting seniors are not concise in their write up. Yet others complained about "fluff", "hyper inflation" and lack of honesty in the write up. Indeed, a lack of honest feedback, especially of a critical or negative nature, was a recurring theme in the responses. Many respondents said reporting seniors are wary of writing anything negative, which leads to inflated evaluations and code words to signal intent to promotion boards. According to one respondent, "there is a culture of fear of ending a Sailor's career if there's any non-positive element in the evaluations." Another said, "it's hard to say something negative due to the culture. Reporting Seniors must become artists and be creative on how to make Sailors stand out within the constraints of the form structure". Yet another respondent complained, "you can't say anything negative, which forces them [promotion boards] to read between the lines." Such a culture of inflated, but coded evaluations, does not serve candidates, promotion boards or the Navy.

Many respondents argued that poor training, especially of junior COs (O4s) was responsible for the uninformative and inflated evaluations. For example, if a CO is less familiar with the board process and language, their write up can be misinterpreted by board members. This was an area where the respondents all agreed that reporting seniors need better and more specialized training on writing honest and effective performance write ups. These comments included, "We need training guides for officers on how to write it [FITREP] properly", "I sat in 6 boards this year and I've noticed an inconsistency in RSs, especially junior RSs", and "having proper signals to the board is crucial, so that kind of training is critical to be an effective CO helping their Sailors." Apart from more training, some respondents were explicit about the type of training required noting some communities are better at training their reporting seniors than others. Quoting at length below, this respondent emphasized training reporting seniors to write effective evaluations for sailors that fall in the middle of the distribution.

RSs in other communities are better than others. HR has trainings for board members, like trainings and mentoring for O6s by the O7. It's easy to write on great and terrible people, but it's harder to write on people in the middle. This can be somewhat mitigated by conducting trainings. The focus should be on how to write honest assessments of performance instead of focusing on the golden child because they'll promote regardless. We need more consistency across all RSs and need standardized trainings for them. Board members see inconsistency depending on the community when it comes to boards.

Using experienced senior board members to train upcoming commanding officers was a common recommendation along with using specific examples of good and bad evaluations. In addition to standardized training for unit COs to train their JOs, a respondent suggested a prospective Executive Officer (P-XO) course to revamp the training on evaluations. In their view including such a course in the P-XO training pipeline would enable prospective COs to effectively communicate to the board and provide an honest assessment of their sailors. Another recommendation was to focus on community specific themes because each community/rating has different milestones, which require a tailored evaluation in the FITREP/EVAL. On the same theme, some respondents called for the establishment of community/rating specific standards for promotion because they would allow each community/rating to define their own "gold standard" for promotion, making the milestones transparent for board members and the individual sailors. One respondent mentioned that the Navy SEALs have established clear milestone timelines for advancement, which has served the community well.

To summarize these responses, respondents generally agreed that the FITREP/EVAL system does a better job of capturing past performance compared to future potential. They identified (1) a culture of hyper-inflation, (2) fear of writing negative feedback, and (3) poor training as key constraints. In response, their recommendations were to offer better training to junior officers, encourage a culture of honest feedback, and better alignment of the Performance Evaluation system with community/rating standards.

Traits

We asked two questions on traits namely (1) whether the FITREPs/EVALs are evaluating the right traits, and (2) whether the Navy should switch to a binary Does/Does Not Meet the Standard grading. In response to the first question, respondents across the twelve focus groups agreed that reporting seniors do not use the traits to accurately evaluate a sailor's performance. Rather, the trait evaluations are done after the reporting senior determines the individual's rank and then the individual trait responses are reverse engineered to generate an average that will lie above or below the RSCA. As one respondent said, "the actual traits are good and reflect something we value, but traits have become a numbers game for managing RSCA." Others reiterated, "traits are more of an afterthought" and "they are a tool used to manipulate the RSCA." Some respondents mentioned separating Physical Fitness from Military Bearing, which are grouped together. Other mentioned adjusting the traits, expanding traits to include social, team and technical skills, and adding a few new traits to capture changing priorities. Most respondents, however, felt there was limited value to altering the individual trait questions till they are separated from the RSCA and related promotion recommendation.

In response to the question of a binary rating versus the current five-point scale, most respondents believed a binary rating would default to everyone meeting the standard, which would be uninformative to sailors and promotion boards. Many respondents argued that the current system at least offers a reporting senior's assessment of the sailor to promotion boards via their trait average being above or below the RSCA. In contrast to a binary system, some respondents suggested reporting seniors should have to defend their choice of 5s (Greatly Exceed Standards), like the current practice for 1s (Below Standards) and 2s (Progressing). Many respondents felt that grade inflation was a bigger issue than the traits themselves with reporting seniors giving too many 5s, as opposed to 3s and 4s.

In the first four focus groups, we asked respondents for their views on using multiple raters versus a single rater to perform both the trait evaluation and promotion recommendation. Other services use multiple raters, which could confer some advantages. Although an individual's FITREP/EVAL in the Navy is reviewed by multiple people, it is not a formal process. Rather, it is an administrative process to catch errors. Yet, the respondents overwhelming agreed that multiple raters are unnecessary. The majority view was they would not change or improve the evaluation process. As said by a respondent, "it should be the one person's signature because COs have ultimate responsibility. The cost of adding complexity of having multiple raters does not outweigh the benefit." A few respondents pointed out the cost of such a change on smaller commands as stated below.

Tougher for smaller commands to have multiple raters. Although not on the paper, the evals have unofficially been through layers of review already, so that "culture" exists and operating under that assumption yields value for the CO as he/she signs it. Since the responses to this question were uniformly against multiple raters, we did not ask the question in the rest of the focus groups. That said, we believe the Navy should consider the formal use of multiple raters given the practice is standard across the other services.

Midterm Counseling

We asked the respondents to share their views, positive and negative, on midterm counseling along with any recommendations for change. Most respondents said midterm counseling is a valuable tool if used properly. Yet, they acknowledged inconsistency across commands in midterm counseling. In some commands, counseling is happening throughout the year: reporting seniors discuss performance issues and concerns with their sailors often. In other commands, midterm counseling is an administrative drill.

Block 30 on the FITREP/EVAL forms refers to the date of midterm counseling, name of the counselor and signature of the individual counseled. This format according to some respondents leads to it being "just another paper drill." A few respondents shared that "some COs don't even conduct midterms", "many commands do not do them", "it's hit or miss depending on the command", and "it's not done consistently, and the guidance on how to conduct them properly is not standardized." When used correctly, a respondent expressed that "they should be discussing strengths, weaknesses, long-term/short-term goals." Another said it would be useful to "use this time as a career development session." Yet another said reporting seniors should discuss any performance concerns with a sailor early, "don't wait six months to tell a sailor they are failing short in their performance."

While most respondents said midterm counseling is valuable, respondents disagreed on the value of formalizing the process. One respondent suggested adding "a block on the FITREP under block 30 for topics that were discussed." Many respondents said that "formalizing the process" would ensure more consistency in the use of midterm counseling. In response, other respondents asked, "do we always need to document all the counseling?" and another said, "there is an administrative burden for formalizing the midterm counseling process, which may not be worth the gain." Since there are policies on midterm counseling, more emphasis by senior leaders on the importance of midterm

counseling may be sufficient to ensure better compliance without increasing the administrative burden of more documentation.

Periodicity

Unlike the other issues, the respondents had fewer concerns with the periodicity of the FITREPs/EVALs. Some respondents suggested semi-annual evaluations would be useful, but others argued it would not be worth the extra administrative burden and would "distract commands from completing the mission." Others raised concerns about the start period of the evaluation. For example, if a Lieutenant arrives at a command in May, their evaluation window is shorter than Lieutenants that were at the command since January. Lieutenant FITREPs are due in January, which leads to comparisons between people that are observed for different lengths of time and with reporting seniors favoring individuals that have been at a command longer than others. Apart from this concern, most respondents did not express other concerns or recommendations for change.

Chief of Naval Operations for a Day

We received detailed and valuable feedback in response to respondents' top three recommendations for change if they were Chief of Naval Operations for a day. In the discussion below, we group the recommendations into three common themes: administrative changes; major overhauls to ranking, forced distribution, and promotion; and culture.

Administrative:

The Navy launched eNavFit, the new online interface for recording FITREPs/EVALs in 2022, which already incorporates many administrative recommendations of the participants. Nonetheless, we briefly summarize our focus group recommendations in case they are useful to future updates of eNavFit. Respondents were in universal agreement that any new system should have "no more paper", "paper-less process", and should "lighten the administrative load to save resources (time)." Many respondents want to see a "fully digital online" system with more automation (pre-filled information), which enables both reporting seniors and sailors to enter information online with relative ease. Apart from legacy issues of NAVFIT98, some respondents asked for more space in Block 41 (the narrative on performance), standardization of the expectations
surrounding midterm counseling, standardized training on writing effective FITREPs/EVALs, and restructuring E9 evaluations with no EVALs for Master Chiefs.

Major Overhauls:

FITREPs/EVALs serve dual functions. First, the reporting senior uses the FITREP/EVAL to evaluate sailors under their command, which can offer useful feedback to sailors. Second, the reporting senior uses the FITREP/EVAL to offer their promotion recommendation (P/MP/EP) of the sailor, which helps promotion boards identify the best and fully qualified candidates. Many recommendations under this theme for major overhauls relate to problems emanating from this dual function of the same instrument. As stated by a respondent: "stop using it [FITREP/EVAL] as a ranking tool, but simply a performance evaluation. Reporting seniors can provide direct inputs to boards on whether they are ready for promotion. This requires us to establish a gold standard for promotion."

Many respondents recommended moving away from "group comparisons", "drop forced distribution" and the current P/MP/EP system in favor of developing ratings/community specific standards whereby sailors can be compared to these "gold standards" as opposed to each other. According to one respondent, these standards should "have a clearer expectation set by CNO on what is important in that community." To that end, some respondents recommended changing block 41 (officer FITREP) and block 43 (enlisted EVAL) to be rating specific. Indeed, some respondents recommended rating specific evaluations in general because the boards are separated by ratings. This would involve each community/rating to define their "best and fully qualified", and reporting seniors would assess sailors based on that standard.

To separate the promotion recommendation, a few respondents also recommended reporting seniors "write a letter to the board, let them know how great they [sailors] are," which according to another respondent "sends more information to the board." A respondent expressed that the P/MP/EP system is a "dumbed down recommendation" versus offering more information and a detailed evaluation of a candidate's promotion potential. Many respondents also offered their recommendations for new ranking systems: qualified versus best and fully qualified; ready now, on-track, tracking; ready, need additional training, not ready; and the USMC "Christmas tree" identifying the top 1%, top 5%, top 10%, top 25%, etc.

Culture

In every focus group at least one respondent noted that any major overhaul would be ineffective unless the Navy instills a stronger culture of honesty, by both reporting seniors and in board discussions. As expressed by respondents, "we need to force honesty in the reports", "change the system where we [promotion boards] need to interpret subtle messages", there is too much "grade inflation", allow reporting seniors to "reset their RSCA", "allow honest discussion during board for board members, you can't say anything negative, which forces them [board members] to read between the lines", and "enforce honesty from reporting seniors."

Respondents also noted the culture of secrecy surrounding the promotion board process, which prevents reporting seniors from sharing constructive feedback with their sailors. Although the focus of our discussions was on FITREPs/EVALs, some respondents recommended more consistency in the board process. As expressed by one respondent, "the purpose of boards is to compare our Sailors, and this needs to be consistent throughout. [We] need to monitor board members' level of fatigue to ensure a fair assessment across all the boards."

Before concluding, we want to emphasize that many respondents expressed they have learned to navigate the current system, broken though it may be. They emphasized that any shift to a new system would require effective standardized training across commands along with a renewed emphasis on honest reporting with examples set by senior Navy leadership. We also want to note that a few respondents familiar with civilian systems and those of the other services spoke more favorably of the Navy system.

In these focus groups, we drew on a group of fifty individuals with extensive experience as reporting seniors and board members for their assessment of the Navy Performance Evaluation system. While the feedback was very detailed and specific, it is perhaps not representative of the larger fleet where most sailors are not reporting seniors or board members. To that end we used the feedback from the focus groups to field a survey with a larger pool of sailors. We turn to the survey instrument and findings next.

IV. SURVEY FINDINGS

A. DESCRIPTION AND DATA/SAMPLE SUMMARY

We conducted two online surveys to gather active-duty sailors' and officers' sentiments about the current professional evaluation system as well as opinions about the potential efficacy of proposed reforms. To solicit respondents to the first online survey, we worked with COs of thirteen different commands that shared a Qualtrics survey link with their commands on our behalf. A small set of questions (Part 1) from our first online survey on views regarding Navy performance evaluation were included with the second online survey promoted via social media, whose primary focus was on validating new trait and values statements (Bacolod and Helzer, 2022).

These surveys are spiritual successors to the Navy-wide Personnel Surveys, which were conducted irregularly from 1998 to 2008.⁴ Table 5 tracks broad trends in survey responses across the last 24 years. As the survey questions have changed over time, we were only able to identify three broad areas that have remained consistent throughout most of the surveys. Overall, questions about the efficacy, fairness, and timeliness of the evaluation system are stable from 1998 to 2008. However, our most recent 2022 survey responses show a dramatic decline in the opinions of the evaluation system held by Navy personnel. The magnitude of the drop may look larger due to the gap between the last survey and our survey: a period of 14 years. The lack of data between the intervening years makes it difficult to diagnose the drop: it may be a gradual worsening of opinions, or it may be a relatively recent phenomenon.

At least some of the discrepancies between the 2008 survey and the current surveys may be due to the ordering of the questions which primes the respondents. For example, while the 2022 survey respondents display similar sentiments about whether the "best and most qualified officers/sailors get promoted", and there is a 30 to 40 percentage point gap in the answer to whether the system is "fair and accurate" compared to the earlier surveys. Given the similarities in the questions, it is difficult to reconcile the wide

⁴ The DoD has run an annual Status of the Force Survey beginning in the late 2000s, but this survey asks only five questions on aspects of military service that do not overlap with our questions on performance evaluation so we cannot use them for comparison. See this <u>link</u> for the 2020 findings.

difference in responses. In designing future surveys, we should pay attention to this fact: mistaking responses due to priming for accurate sentiment may lead to an incorrect understanding of the mindset of the sailors and officers.

 Table 5. Historical Trends in Perception of the Navy's Evaluation System

Of our two surveys, the first was administered through Qualtrics and was composed of two parts. Part 1 asked about survey respondents' opinions about the current evaluation system. Part 2 asked survey respondents' assessments of the potential efficacy of proposed reforms to the current system. This survey was open from July 11, 2022 to August 17, 2022. At the close of the survey, 395 respondents were recorded. The second survey was advertised via social media apps to garner additional responses to assist the Bacolod and Helzer (2022) project on trait and value statements. This survey only asked about Part 1 of the first online survey. Data from respondents were collected on August 23, 2022, with 2,562 additional survey responses recorded.

The surveys did not query for socio-demographic information but asked for DoD ID to shorten the survey to encourage completion. The survey data was then merged with socio-demographic information held by Defense Manpower Data Center (DMDC) using the unique identifier. After eliminating approximately 20% of incomplete or non-sensical responses (ex. submitting DoD ID as 123123123, etc.), DMDC matched approximately 95% of the survey respondents.

Table 6 presents summary statistics of the respondents, separated by enlisted sailor and commissioned officer status. As we will demonstrate later, the separation of the sample along these lines presents the most salient divergence in opinions held about the evaluation system. Broadly, the respondents' socio-demographic characteristics tracks the overall Navy population. As active duty enlisted to officer ratio is approximately 4:1, we have slightly over-sampled officers in these surveys. Our sample is slightly older, but this is unsurprising, as we focused on sailors and officers with experience in both receiving and giving evaluations. Females comprise 18 to 20% of the sample, and minorities comprise about 40% of the enlisted and 20% of the officers. Approximately 45% of enlisted do not have education beyond a high school degree (or GED) while over 70% of officers have education beyond a Bachelor's degree.

Table 6. Summary Statistics of the Survey Sample

B. PART 1: OPINIONS ABOUT CURRENT EVALUATION SYSTEM

Part 1 of the surveys asked nine questions regarding the perception of the respondents about the current evaluation system with a five-point Likert scale (and a sixth option for "Not enough experience to have an opinion"). The first four questions ask two otherwise-identical questions about FITREPs and EVALs separately. For this report, we combine these four questions into two questions.

Table 7 compresses the Likert scale into a binary variable of agree/do not agree and presents the summary of opinions held by enlisted sailors and officers. Overall, respondents hold negative opinions about many aspects of the current evaluation system. Most sailors and officers do not believe that the evaluations offer clear and useful feedback. While more respondents agree that their supervisors hold regular meetings to offer feedback and evaluations are processed in a timely manner, rarely does the proportion of those agreeing rise above 50%. There is also wide divergence in opinions about the efficacy of the system across enlisted sailors and officers. In particular, enlisted sailors have a much lower opinion of the efficacy and fairness of the evaluation system in promoting the best and most qualified.

State of the Eval	J		Maara	C D
T 1 4 4 1 41 4	Mean	S.D.	Mean	S.D.
I agree somewhat to strongly that:	Enlisted		Officer	
Overall, evaluation system ensures best and most qualified officers/sailors get promoted.	0.183	0.387	0.308	0.462
Overall, evaluation system provides useful feedback to improve performance.	0.264	0.441	0.223	0.417
I have changed my behavior in response to feedback received on an EVAL/FITREP.	0.398	0.490	0.232	0.423
Direct supervisor regularly holds conversations about my job performance with me.	0.384	0.486	0.401	0.491

Across my Navy career so far, my FITREP/ EVAL have been processed on time.	0.403	0.491	0.638	0.481
Across my Navy career so far, I think the FITREP/EVAL system is fair.	0.144	0.351	0.294	0.456

Table 7. Fraction of Respondents who Agree with Statements about the Current State of the Evaluation System

Table 8 presents linear-probability model estimates with the agree/do not agree variable as the dependent variable and socio-demographic characteristics as regressors, to capture where the greatest divergence in opinions is held. The parameter estimates can be interpreted as the difference in fraction of those who agree with the opinion question across the specific characteristic. For example, in the first set of results, which asks whether the "evaluation system ensures the best and most qualified officers/sailors get promoted," the parameter on "Officer" is the largest in absolute magnitude, at 0.174. This

can be interpreted as: officers are 17.4 percentage points more likely to agree with this statement, compared to enlisted sailors. The variable "Officer" has the largest absolute magnitude in 4 out of the 7 questions. As such, we focus on the differences held between enlisted sailors and officers throughout the quantitative analysis.

Note: Constant is not shown. *** denotes significance at 1%, ** at the 5%, and * at the 1% levels.

Figures 1 to 6 show detailed Likert scale results from Part 1 along some salient socio-demographic characteristics. Figures 1 and 6 especially highlights the degree of difference in mistrust in the current system to do a good job of fairly and effectively promoting those who deserve to be promoted. While negative opinions dominate for both enlisted sailors and officers, the fraction of those who most strongly feel that the system is unfair or ineffective is almost twice as large from the enlisted population compared to the officer population.

Figure 1. Likert scale results to the statement: Overall, the evaluation system ensures the best and most qualified officers/sailors get promoted. Data separated by enlisted/officer.

In contrast, as shown in Figures 2 and 3, there is wide agreement that the feedback that is offered during the evaluation process is not very useful, both across the

enlisted/officer divide as well as across gender or race. In fact, across the opinion questions, there is very little substantive divergence in opinion across race or gender lines. On the positive side, this indicates that sailors and officers across race and gender categories do not feel as if they are treated differently in the current evaluation system. On the negative side, the opinions held in this universal manner are mostly of a low opinion of the current system.

Figure 2. Likert scale results to the statement: Overall, the evaluation system provides useful feedback to officers/sailors so they can improve their performance. Data separated by enlisted/officer.

Figure 3. Likert scale results to the statement: Overall, the evaluation system provides useful feedback to officers/sailors so they can improve their performance. Data separated by male/female.

Figure 4 shows that, despite holding a lower opinion of the efficacy of the system, and as Figure 5 shows, experiencing more delays in timely processing of their evaluations, enlisted sailors report that they are much more willing to change their behavior in response to feedback received.

These survey responses imply that if reforms to the current evaluation system can improve the perceptions of fairness and efficacy, enlisted sailors may be more likely to substantively change their behavior and performance in line with Navy priorities and expectations. The survey results for officers imply that substantive changes may be more difficult. Even though officers have a more favorable view of the current system, they do not value feedback and are unlikely to change their behavior in response to the feedback.

Figure 4. Likert scale results to the statement: In my career, I have changed my behavior in response to the feedback that I have received on an EVAL or FITREP. Data separated by enlisted/officer.

Figure 5. Likert scale results to the statement: Across my Navy career so far, my FITREPs or EVALs have been processed on time. Data separated by enlisted/officer.

Figure 6. Likert scale results to the statement: In general, across my Navy career so far, I think the FITREP/EVAL system is fair. Data separated by enlisted/officer.

C. PART 2: OPINIONS ABOUT PROPOSED REFORMS

Part 2 of the survey asked respondents to cardinally rank proposed reforms to the current evaluation system to increase:

- 1. Feedback to sailors
- 2. Honesty and accurate assessment

- 3. Clarity for personnel decisions
- 4. Ease of use
- 5. Alignment with Navy expectations

As described in the previous section, the potential reforms were generated from the feedback in the focus groups. Respondents were asked to divide 100 points into one of the four proposed reforms for each of the five areas.

The first column of Table 9 shows how the entire sample allocated the points, and the second and third columns show how enlisted sailors and officers allocated points. For the first column, we also evaluated via a t-test of whether the average amount of points allocated to each reform was different from a "random draw." If most respondents felt that none of the reforms were markedly better or worse than any other, they would likely distribute points equally across the choices. Therefore, the null hypothesis is that each reform should equal 25 points. Reforms that are statistically different from 25 points are highlighted with stars indicating significance levels.

In the domains of increased "feedback" and "honest and accurate assessment," there are no clear preferred or unpopular reforms.⁵ In the domain of "clarity for personnel decisions," there is one clear popular reform in changing the timing of evaluations to allow for a period of time after a sailor has moved to a new command. The least popular proposed reform is to reduce the number of competitive categories for officers to only unrestricted line, restricted line, and staff corps. For increased "ease of use," most respondents dislike the idea of allowing promotion board members to review records prior to arriving at the selection boards. Finally, for increased "alignment with Navy expectations," respondents are nearly unanimous in rejecting the proposal to periodically changing the evaluation forms to include priorities of the CNO. The most popular reform by far is to provide centralized training in writing evaluations.

The second and third columns split the sample into enlisted sailors and commissioned officers. The stars in the third column indicate statistically significant differences in opinions held by sailors and officers. While there is broad agreement on

⁵ Although there are statistically significant differences from 25 points in the "feedback" domain, due to the relatively small sample size, only a small number of respondents who feel stronger about one reform over another is necessary to swing the average 5 points.

the desirability of many of the reforms proposed, there are some substantial differences in preferences. For example, officers hold a much more favorable view of calculating and tracking RSCA for evaluation purposes. Officers also would prefer to make it easier to submit an adverse report, focus one part of the evaluation to provide honest feedback with the aim to improve performance, and reduce space for written comments. Figure 7 to 11 display the results of Table 9 graphically.

 Table 9. Cardinal Ranking of Proposed Reforms across the Five Domains the Navy would like to Improve, with Entire Sample, Enlisted Sailors, and Officers.

Increase feedack to Sailors:EveryoneEnlistedOfficerRequire rater/RS to give feedback relative to specific expectations and standards, and not relative to their peers.26.625.628.0Require raters/RS to provide written feedback that will be formally documented as part of midterm counseling.19.5***20.118.5Stop calculating and tracking the RSCA on the Sailor evaluation portion of the FITREP/EVAL.24.127.518.9***Focus one part of FITREP/EVAL on honest feedback to help Sailors learn and develop.29.8***26.734.6***Increase honest and accurate assessment:EveryoneEnlistedOfficerAdd a statement on FITREP/EVAL form that Navy expects rater/RS to provide accurate and honest feedback.27.427.427.3Require rater/RS to make comments to support any ratings of "5" (Greatly Exceeds Standards) on a trait.24.521.229.6***Change policy so that it is easier to submit an adverse report.24.521.229.6***Increase clarify for personnel decisions:EveryoneEnlistedOfficerChange P/MP/EP recommendation: (1) not yet ready, (2) progressing, (3) qualified, & (4) best & fully qualified.25.725.626.0Provide guidance to raters/RS on writing comments about potential to match community/rating specific req.36.5***36.536.5Change thing of reports so that they are written after Sailors have been at a command for some ant of time.36.5***36.536.5Require ater/RS to nupretricted line, restricted line, and staff corps.<	Which of the following would best:

Figure 10. Cardinal Ranking of Proposed Reforms to Increase Ease of Use. Sample split by enlisted sailors and officers.

Figure 11. Cardinal Ranking of Proposed Reforms to Increase Alignment with Navy Expectations. Sample split by enlisted sailors and officers.

We also leverage results from Part 1 to do additional analysis of the sentiments about proposed reforms. From Part 1, we can identify respondents who have a generally favorable versus unfavorable view of the current evaluation system. We split the sample into those who somewhat to strongly agree versus disagree that the system is fair and accurate in making sure the best and most qualified are promoted and examine their receptiveness to the proposed reforms. Table 10 shows these results. As we did above in Table 9, we also use stars to indicate a statistical difference in opinions held by those who are favorable/unfavorable to the current system.

Table 10. Cardinal Ranking of Proposed Reforms across the Five Domains the Navy would like to Improve, with Those who Agree/Disagree that Evaluation System is Fair and Accurate.

Fair and Accurate.		
Which of the following would best:	Evaluation	n system is fair
	and accurate	ate:
Increase feedack to Sailors:	Disagree	Agree
Require rater/RS to give feedback relative to specific	25.0	30.1
expectations and standards, and not relative to their peers.		
Require raters/RS to provide written feedback that will be	17.6	23.7***
formally documented as part of midterm counseling.

Note: *** denotes significance at 1%, ** at the 5%, and * at the 1% levels. The second column significance is differences from the value in the first column.

There is a surprising amount of agreement across the two groups of respondents. In the domains of increased "clarity for personnel decisions," "ease of use" and "alignment with Navy expectations," there are few substantively different opinions. However, there are two domains where opinions diverge sharply. In increased "feedback to sailors," those who like the current system are much more strongly opposed to terminating the use of RSCA. In increased "honesty and accurate assessment," those who are unfavorably inclined to the current system strongly prefer a reform that includes a reminder to the rater to provide accurate and honest feedback. See Figures 12 and 13.⁶ Although these may simply reflect the positive or negative opinions held by the respondents, they may imply that even respondents who do not like the current system may be open to receiving valuable constructive feedback to improve their performance.

⁶ One other element to note is that there is strong correlation between negative opinion of the current system and enlisted sailor status. Therefore, it is not a surprise that enlisted sailor opinions on reforms mirrors closely opinions of those identified as disfavorably inclined toward the current system.

Figure 12. Cardinal Ranking of Proposed Reforms to Increase Feedback to Sailors. Sample split by those who agree or disagree that the current system is fair and accurate.

Figure 13. Cardinal Ranking of Proposed Reforms to Increase honesty and accurate assessment. Sample split by those who agree or disagree that the current system is fair and accurate.

Overall, respondents are most opposed to reforms that increase workload for the raters. The strongest opinions about the least preferred reform center around increased written comments space and changing evaluated categories regularly to reflect CNO's priorities. This may be reflective of the fact that senior sailors and officers are already taxed for time in their other duties. It may be difficult to get buy-in for reforms that

require additional time and effort by raters. Raters may be most open to training if the goal is to streamline and standardize the evaluation system to make it faster and more efficient to complete evaluations.

The uniform dislike of the proposed reform to allow for board members to preview records may reflect a distrust of the impartiality of the system. The relatively negative opinion about the fairness and efficacy of the evaluation system may extend to how the evaluations are used in the promotion boards.

The last four questions on our survey solicited text input on four questions. First, we asked participants, "do you have any recommendations the Navy should consider for changing the EVALs and/or FITREPs process that are not included in the list above?"; second, "regarding how the Navy currently does FITREPs and/or EVALs, what do you think works WELL?"; third, "regarding how the Navy currently does FITREPs and/or EVALs, what do you think needs to be CHANGED?"; and fourth, "do you have any additional feedback or recommendations regarding the Navy's performance evaluation system that you would like to share? If so, please do so in the space provided." Unlike the Likert scale and numeric questions, around 40 to 50 percent of respondents answered these questions.

We ran these responses through standard text mining software and sentiment analysis. But, the AI based analysis was not robust with some platforms coding responses as positive and others coding the same response as negative. Moreover, identifying common phrases and terminology was not helpful in interpreting the content or the sentiment of the comment. In lieu of such an analysis, we read all the responses and summarize the general *zeitgeist*, i.e., spirit, of the responses. Some respondents believe the entire evaluation system is broken and did not offer any substantive recommendations. Like the focus groups, many respondents highlighted cultural problems in the evaluation, namely inflated write ups. Some respondents advocated for fewer options for write ups and offering less space on the form for write ups. Others advocated for a cultural change whereby reporting seniors can give honest feedback without any negative consequences on them. Apart from inflation, favoritism and nepotism were mentioned as common concerns with recommendations for outside evaluators/evaluations and 360-degree feedback.

44

Regarding ranking, many respondents noted that the current system promotes seniority over performance because of the periodicity of the process. In particular, respondents highlighted that the practice of "welcome aboard P" hurts officers that are transferred to a command mid-cycle for example and are unlikely to receive an MP or EP over a senior officer that has been around the same command for multiple years. On the flip side, many respondents shared they like the periodicity of the evaluation cycle whereby all officers of the same rank are evaluated in the same month. They cautioned that any move away from such a system needs to account for the organizational disruption to the evaluation cycle. A few respondents recommended moving away from forced distribution of limiting MPs and EPs. Yet, this was also one area other respondents argued worked well in the Navy. Indeed, many respondents said the RSCA and ranking system was effective enabling reporting seniors to offer a candid comparative assessment without inflation.

Across the four questions, midterm counseling was highlighted as a valuable tool to share feedback with sailors with recommendations to ensure its use is standardized across commands. Most respondents that mentioned eNavFit spoke favorably about the transition away from NavFit98 to the new online system although a few respondents expressed concerns about bandwidth issues on ships and submarines where bandwidth is necessary for operational requirements over administrative duties. Respondents also noted the importance of better information and training on convening orders and the evaluation process in general. This mirrors the focus group feedback on more and effective training.

Finally, these opinions on the proposed changes and text responses also may reflect the degree to which evaluations are not always considered as central to the mission. Reforms of evaluation systems *should* focus on "cutting the fat" and increasing efficiency. However, evaluation should not be considered a "residual" duty that comes after other "higher priority" tasks are completed. In as much as human capital is of central importance in maintaining our edge over our global competitors, fairly and accurately evaluating personnel, making sure that we promote the best and brightest, and providing training and guidance to ensure that everyone can improve, should always be a point of emphasis for the Navy.

45

V. CONCLUSION AND RECOMMENDATIONS

Using a three-pronged approach, this project assessed Navy performance evaluation using (1) an across-service comparison of forms, (2) feedback from Navy SMEs in focus groups, and (3) feedback from the larger fleet via surveys. Before we discuss recommendations for courses of action to update the evaluation instruments, we want to highlight the poor perception of the current Navy system. A majority of the survey respondents do not agree that the Navy promotes the best and fully qualified, provides clear feedback to sailors/officers, or that the evaluation is fair. Indeed, timeliness is the only dimension on which a majority of respondents have a positive opinion of the Navy system. Against this backdrop, senior Navy leadership have to "market" any reform or change such that sailors and officers appreciate their feedback was part of the process and their feedback will be sought as reforms are evaluated after being introduced.

Based on the detailed across service comparison, focus group feedback and survey findings, we recommend the following reforms to the current system. First, the Navy should consider separating the individual evaluation of traits from the comparative assessment and potential piece of the evaluation. Most other services use a separate question for comparative assessment like the Army. They do not use an average generated from the individual trait evaluations. While the USMC FITREPs generate an average scaled version of their 14 trait evaluations, they also offer a "Christmas tree" visual for the comparative assessment that the Navy does not. Separating the trait evaluations from the assessment of future potential of a sailor/officer would increase the accuracy and quality of the feedback shared with sailors and officers. A separate comparative assessment can be paired with a forced distribution as in the Army to ensure accurate information is shared with promotion boards.

Second, the Navy must offer better training to reporting seniors on writing clear, honest, and informative evaluations. This was a recurrent recommendation in the focus groups and survey with many respondents pointing to inconsistency in the quality of the narrative write up. We recommend incorporating a centralizing training session run by experienced reporting seniors into the training pipeline as sailors/officers advance to ranks where they will be writing EVALs/FITREPs. We also recommend the Navy draw on the expertise of communities like HR that have a track record of training their junior officers on writing evaluations. The trainings can be a further opportunity to educate reporting seniors on an honest assessment.

Third, we recommend the Navy change the timing of evaluations such that summary groups do not include individuals that have served for widely different lengths of time under the same reporting senior. Survey respondents want to see this change and many respondents alluded to this problem with the current system favoring "seniority" over "rank" in their comments. This is a big administrative change, which requires many steps that will affect both the evaluations and their interpretation by promotion boards. If the Navy moves forward with this recommendation, we recommend a major marketing campaign lead by Navy leadership to socialize the change and promote its benefits.

Fourth, we recommend the Navy formally incorporate more reviewers or raters in the evaluation process like the other services. While this may increase the administrative burden, we recommend the Navy consider a process improvement whereby the many informal looks in the current system are formalized to a reporting senior completing their evaluation followed by one or two reviewers as deemed necessary. Additional reviewers should add their own comments. They should not overwrite the comments of the reporting senior.

Fifth, we recommend a detailed administrative process review to find any redundancies and opportunities to reduce the time costs of the system. Many of the proposed reforms above may increase administrative burden on an already over-worked workforce. It is important that the Navy finds offsetting "cuts" to streamline the evaluation system wherever possible.

Finally, we recommend the Navy must analyze the effects of any reforms as they are rolled out allowing for changes and updates to correct issues as they are discovered. This would enable more dynamic talent management as opposed to fixing issues as part of major overhauls that occur once every 20 years or so.
